

Routledge - CRC Press

Science & Technology Catalogue

July - December 2024
New and Forthcoming Titles

Chemistry, Computer Science, Mathematics, Physics,
Software Networking & Security and Statistics

Welcome

Welcome to the July to December 2024 Science & Technology Catalogue.

Subjects include Chemistry, Computer Science, Mathematics, Physics, Software Networking & Security and Statistics.

We welcome your feedback on our publishing programme, so please do not hesitate to get in touch – whether you want to read, write, review, adapt or buy, we want to hear from you, so please visit our website below or please contact your local sales representative for more information.

www.routledge.com

*Prices are correct at time of going to press and may be subject to change without notice.
Some titles within this catalogue may not be available in your region.*

eBooks

We have over 50,000 eBooks available across the Humanities, Social Sciences, Behavioural Sciences, Built Environment, STM and Law, from leading Imprints, including Routledge, Focal Press and Psychology Press. These eBooks are available for both individual and institutional purchase.

INDIVIDUALS

Our eBooks are available from Amazon, Apple iBookstore, Google eBooks, Ebooks.com, Kobo, Barnes & Noble, Waterstones, Mobipocket, VitalSource, and CourseSmart.

LIBRARIES AND INSTITUTIONS

Subscribe to or purchase a wide range of eBook packages or pick and mix your own from our complete collection (a minimum number of titles applies). FREE TRIALS are available. For more information, please visit www.tandfebooks.com or contact your local sales team.

eUpdates

Register your email at www.tandf.co.uk/eupdates to receive information on books, journals and other news within your area of interest.

Partnership Opportunities at Routledge

At Routledge we always look for innovative ways to support and collaborate with our readers and the organizations they represent.

If you or your organization would like to discuss partnership opportunities, from reciprocal marketing activities to commercial enterprises, please do get in touch on partnerships@routledge.com.

Considering Books for Course Use?

 This symbol shows books that are available as complimentary exam copies for lecturers or faculty considering them for course adoption. To obtain your copy visit the URL listed beneath the title in the catalog and select your choice of print or electronic copy.

Visit www.routledge.com or in the US you can call 1-800-634-7064.

 This symbol shows books that are available as electronic inspection copies only.

A Foundation Course for College Organic Chemistry

B. S. Balaji Jawaharlal Nehru University, India

To understand and improve the underlying principles that govern how organic reactions occur, A Foundation Course for College Organic Chemistry follows a brick-by-brick building approach. Emphasis is given to interrelating experimental facts and findings with predictions (mechanism) and inferences (results). Discussions focus on clarifying how complex organic reactions occur, which is based on electronegativity differences, movement of electrons (through σ framework or π bonds), addition or removal of atoms (hydrogen, halogens) or groups (hydroxy, amino).

Acknowledging Indigenous Knowledge

Voices of Tropical Forest People

Purabi Bose SLU, Sweden

Series: Urbanization, Industrialization, and the Environment

This book explores how the landscapes in indigenous territories are rapidly changing due to increased global industrial demand. This deforestation and urbanization has isolated the Indigenous People from practising 'traditional ways of life.' Portrayed in the book are the Indigenous People's perspective of their Indigenous Knowledge about the environment, and why losing IK is a threat to humans, wildlife and nature. Insight is shared into why acknowledging IK as a science can help solve climate change, food and nutrition insecurity and increasing new types of pandemic, through evidence-based stories from Indigenous people.

Advances in Chromatography

Volume 60

Edited by Nelu Grinberg, Peter W. Carr

Series: Advances in Chromatography

For six decades, scientists and researchers have relied on the Advances in Chromatography series for the most up-to-date information on a wide range of developments in chromatographic methods and applications. The clear presentation of topics and vivid illustrations for which this series has become known make the material accessible and engaging to analytical, biochemical, organic, polymer, and pharmaceutical chemists at all levels of technical skill

2ND EDITION

Basic Chemical Concepts and Tables

Steven L. Hoening American Public University, Charles Town, WV, USA

Fully revised and expanded, the second edition of Basic Chemical Concepts and Tables is written as a quick reference to the many different concepts and ideas encountered in chemistry. The volume presents important subjects in a concise format that makes it a practical resource for any reader. Subjects include general chemistry, inorganic chemistry, organic chemistry, and spectral analysis. The new edition includes updated tables that are useful as for the interpretation of ultra-violet (UV), infra-red (IR), nuclear magnetic resonance (NMR) and mass spectroscopy (MS) spectra, and expanded sections devoted to the concept of isomers and polymer structures.

Biologically Active Substances Usable in Food, Pharmaceutical and Agrobiological Fields

Zeno Garban RATB, Romania, **Gheorghe Iliu** West University, Romania

Series: Medicinal Plants and Natural Products for Human Health

This concise text on biologically active substances of the food, pharmaceutical and agricultural industries presents data on natural compounds of vegetable and animal origin. Various nutrients in food, phytochemical and zoochemicals are discussed, including their uses for prophylactic, metaphylactic and therapeutic purposes in personalized medicine. Along with these compounds, prebiotics isolated by biotechnological methods from plant tissues are reviewed. Metabolism of nutrients and the biodegradation of xenobiotics are hot topics and access routes into the human body for the various biologically-active substances are covered.

Biomolecules

Chemistry of Living System

V.K. Ahluwalia

Biomolecules, also known as molecules of life, are essential for sustaining life processes. This book presents a study of these crucial biological substances to explore their types, function, structure, biological role, and synthesis. The subject matter of this book also covers: Mucopolysaccharides Tertiary Structure of Proteins Caffeine Mechanism of Enzyme Action Biosynthesis of Haemoglobin Print edition not for sale in South Asia (India, Sri Lanka, Nepal, Bangladesh, Pakistan or Bhutan)

Biosimilars Development Strategies

Fast to Market Approaches

Sarfaraz K. Niazi Therapeutic Proteins International, LLC, USA

After 18 years since the first biosimilar was approved, a lot has changed, from the regulatory guidelines to the stakeholder perceptions about the safety and efficacy of biosimilars. However, the development costs remain high, preventing faster entry into markets with more than 200 choices. Analyzing the regulatory filings of all approved biosimilars in the US and EU, a deep analysis of the scientific principles, and continuous challenges to the regulatory authorities have made it possible to plan the development on a fast track.

Carbon-Based Nanocomposite Applications and Microelectronic Technologies

Loutfy H. Madkour Tanta University, Egypt

Carbon-Based Nanocomposite Applications and Microelectronic Technologies covers the fundamentals of Carbon-based Nanomaterials (CNMs) and their potential for technological and industrial applications. Written by a leading expert, this volume gives thorough coverage of bio-nanotechnology and biomedical applications of novel carbon nanomaterials and explores the development of microelectronics technologies and nanocomposite.

Carbon-Based Nanomaterials for Sustainable and Technological Applications

Loutfy H. Madkour Tanta University, Egypt

Carbon-Based Nanomaterials for Sustainable and Technological Applications covers the fundamentals of Carbon-based Nanomaterials (CNMs) and their potential for technological and industrial applications. Addressing recent advancements in technology and improvement in material synthesis, the book outlines how functionalized CNMs are used in nanobiotechnology, for active sorbent materials, and in pharmaceutical applications. Chapters cover macro-scale applications, biosensors and drug delivery and treatment in cancer and coronavirus diseases.

Chemistry

Energy, Matter, and Change

William B. Tucker

Providing a holistic overview of general chemistry and its foundational principles, this textbook is an essential accompaniment to students entering the field. It is designed with the reader in mind, presenting the historical development of ideas to frame and center new concepts as well as providing primary and summative sources for all topics covered. These sources help to provide definitive information for the reader, ensuring that all information is peer-reviewed and thoroughly tested. This textbook is aimed at an advanced high school or general college audience, aiming to engage students more directly in the work of chemistry.

Chemistry and Biology of Beta Lactams

Bimal Krishna Banik PMU, Saudi Arabia, **Aparna Das**

Due to their medicinal activity and potential use as synthetic starting materials, studies on beta-lactams have increased significantly. This unique volume takes readers on a tour de force from the concept of antibiosis, to the serendipity of antibiotics, evolution of beta-lactam development, and the molecular biology of antibiotic resistance. These areas of research have culminated in a deeper understanding of microbiology, particularly in the area of bacterial cell wall synthesis and recycling. Considerable work has been performed by chemists and biologists to continue updating their findings about beta-lactam synthesis.

3RD EDITION

Classical Mechanics

Tai L. Chow California State University, Stanislaus, Turlock, USA

The third edition of Classical mechanics presents a complete account of the classical mechanics of particles and systems for physics students at the advanced undergraduate level. The textbook evolved from a set of lecture notes for a course on the subject taught for many years by the author at California State University, Stanislaus. It assumes the reader has been exposed to a course in calculus and a calculus-based general physics course. However, no prior knowledge of differential equations is required. Differential equations and new mathematical methods are developed in the text as the occasion demands.

Click Chemistry

Volume 1: Fundamentals and Synthesis

Edited by **Ram K. Gupta**

Click chemistry involves highly efficient, reliable, and stereoselective reactions that can synthesize new materials cost-effectively. The first volume entitled "Click Chemistry: Fundamentals and Synthesis" covers the fundamentals, mechanisms, kinetics, and various approaches to synthesizing new materials making it suitable for synthetic chemists and researchers working in nanoscience and technology. The main objective of this book is to provide information about current, state-of-the-art development in click chemistry as well as challenges.

Concepts of Inorganic Chemistry

Mamta Kharkwal , S. B. Tyagi

Inorganic chemistry is an important branch of chemistry that impacts both our daily routine and several technological and scientific disciplines. The aim of this book is to incorporate the new advancements and developments in this field of study and to discuss their significance in our lives. A detailed discussion about the various aspects of inorganic chemistry is presented and the interpretation of structures, bonding, and reactivity of inorganic substances is also explored. Print edition not for sale in South Asia (India, Sri Lanka, Nepal, Bangladesh, Pakistan or Bhutan)

105TH EDITION

CRC Handbook of Chemistry and Physics

Edited by **John Rumble**

Series: *CRC Handbook of Chemistry and Physics*

High Quality Science requires High Quality Data! Today, more than ever, the CRC Handbook of Chemistry and Physics is critical in ensuring that researchers, educators, and students have the highest quality data for chemical compounds and physical particles. Available both in print and online, the Handbook covers 390 chemistry, physics, and related subjects organized in easy-to-find, well-organized tables. Every year, new reported data and new scientific areas are added, making the Handbook the largest comprehensive physical science data source available anywhere.

Design of Green Liquid Dielectrics for Transformers: An Experimental Approach

Biodegradable Insulating Materials for Transformers

T. Mariprasath , Victor Kirubakaran , Perumal Saraswathi , Reddy Kumar Cheepati , Prakasha Kunkanadu Rajappa

Series: *River Publishers Series in Biotechnology and Medical Research*

This book provides in-depth information about the latest trends in transformer insulation design. This practical guide is prepared from a hands-on perspective, offering readers valuable insights into the trends in liquid dielectrics for transformer applications.

Essential Oils

Biological and Industrial Applications

Edited by **Valdir Florêncio da Veiga Jr , Isaiaka Ajani**

Ogunwande Foresight Institute of Research and Translation, Nigeria, **José L. Martínez** Universidad de Santiago de Chile, Chile

Essential oils, renowned for their multifaceted properties, have been integral to the tapestry of human history, forging connections to our past by evoking memories of cherished places and the aromatic embrace of grandparents' kitchens. Beyond their nostalgic allure, these oils play a pivotal role in various industries, serving as functional compounds in food matrices, packaging, preservatives, and essential elements in plant protection—ranging from pesticides to antimicrobials and repellents. This book unfolds in ten chapters, presenting a collection of groundbreaking studies on the composition, biological, and pharmacological properties of essential oils.

3RD EDITION

Fire Retardancy of Polymeric Materials

Edited by **Charles A. Wilkie**, **Alexander B. Morgan**
University of Dayton Research Institute

The third edition of *Fire Retardancy of Polymeric Materials* provides a single source for all aspects of this highly challenging field of applied research. This authoritative book covers design and non-fire requirements that drive how these materials are fire protected. This thoroughly revised new edition continues to offer comprehensive coverage of the scientific approach for those developing fire safe materials. It covers new topics such as bio-based materials, regulatory issues, recycling, newer flame retardant chemical classes, and more details on how to flame retard materials for specific market applications.

Fluorescent Chemosensing and Bioimaging

Edited by **Suban K. Sahoo** SVNIT, India

Fluorescent Chemosensing and Bioimaging provide detailed information on fluorescent chemosensor design strategies, sensing mechanisms, and potential applications. Fluorescent chemosensors are widely employed for the detection of environmentally and/or biologically important species because of their advantages of low cost, simplicity, high sensitivity, real-time monitoring, versatility, and high temporal and spatial resolution.

3RD EDITION

Foundations of Crystallography with Computer Applications

Maureen M. Julian Virginia Polytechnic Institute and State University, Blacksburg, USA, **Carla Slebodnick**, **Francis T. Julian**

The Third Edition of *Foundations of Crystallography with Computer Applications* is a textbook for undergraduate and graduate students studying the solid state in chemistry, physics, materials science, geological sciences, and engineering. It takes a straightforward, logical approach to explaining how atoms are arranged in crystals and how crystal systems are related to each other. New to this edition is the inclusion of interactive starter programs in Python, which allow the students to focus on concepts and not treat crystallographic programs as 'black boxes.'

Global Regulations of Medicinal, Pharmaceutical, and Food Products

Edited by **Faraat Ali** Department of Inspection & Enforcement, Laboratory Services, Botswana Medicines Regulatory Authority, **Leo M.L. Nollet**

Medicine regulation demands the application of sound medical, scientific, and technical knowledge and skills, and operates within a legal framework. Regulatory functions involve interactions with various stakeholders (e.g., manufacturers, traders, consumers, health professionals, researchers, and governments) whose economic, social, and political motives may differ, making implementation of regulation both politically and technically challenging. This book discusses regulatory landscape globally and the current global regulatory scenario of medicinal products and food products comprehensively.

GMP Audits in Pharmaceutical and Biotechnology Industries

Mustafa Edik

Series: Drugs and the Pharmaceutical Sciences

The fact that GMP audits in the pharmaceutical and biotechnology industries have to be evaluated and with very limited resources has created a gap in this field. The lack of trained and qualified GMP auditors is on the rise in all organizations which are required to implement FDA, EMA, MHRA, WHO, TGA, PIC/S regulations. This volume is an essential reference source for those organizations operating in the field of health and presents the basic knowledge needed to perform audits. The author also provides useful tips and a selection of samples about GMP audits that are indispensable for professionals and health inspectors working in industry and health authorities.

Green Chemistry in 21st Century and Beyond

Cover Image
Not Available

V.K. Ahluwalia, Sunita Dhingra

With an emphasis on minimizing the use and generation of hazardous substances, Green Chemistry is a significant branch of Chemical Engineering. This book details the fundamentals associated with this field of study and focuses on designing products through renewable starting materials, recyclable chemicals, and benign synthesis. The use of green solvents, organic transformations, catalysts, and electrochemical synthesis are also discussed. Print edition not for sale in South Asia (India, Sri Lanka, Nepal, Bangladesh, Pakistan or Bhutan)

Hydrogen Production Processes in Refining Technology

James G. Speight CD&W Inc., Laramie, Wyoming, USA

Series: *Petroleum Refining Technology Series*

An industry expert details the importance and the different approaches to production of hydrogen in petroleum refining. The need for hydrogen is addressed and then the differences between the processes are detailed. The types of feedstock that can be used for each process is also explained. Relevant process data is provided, and process operations are fully described. This practical and accessible guide is written for managers, professionals and technicians as well as graduate students transitioning into the refining industry.

Lanthanide and Other Transition Metal Ion Complexes and Nanoparticles in Magnetic Resonance Imaging

Edited by **Carlos F.G.C. Geraldes** University of Coimbra, Portugal

Series: *Metal Ions in Life Sciences Series*

Since the development of the first clinical MRI contrast agent, Gd(DTPA) (or Magnevist®) in the early 1980s, another three linear and three macrocyclic (eg. Gd(DOTA) (Dotarem®) have been introduced in the clinic and inspired a huge number of researchers worldwide to perform preclinical research to obtain contrast agents for many kinds of clinical applications, which are described in this book. The most current research has been assembled here and can be used by the scientific community to continue increasing the relevance of metal-containing molecules and nanomaterials for MRI-based diagnosis and thus increase the practical use of these systems.

Medicinal Plants of Sabah, North Borneo

Christophe Wiart University Malaysia Sabah, Malaysia

Series: *Natural Products Chemistry of Global Plants*

Researchers in the field of natural product chemistry and pharmacology focus on discovering new drugs from medicinal plants. The medicinal plants of East Malaysia, many of which are found in the whole Asian and the Pacific, represent a vast array of resources that could be used for the discovery of drugs and the development of cosmetics as well as functional food. No other book focuses on the medicinal plants from this part of the globe in such depth.

Metal-Containing Molecules and Nanomaterials

From Diagnosis to Therapy

Edited by **Ana de Bettencourt-Dias** University of Nevada, USA

Series: *Metal Ions in Life Sciences Series*

Since the discovery and successful deployment of salvarsan to treat syphilis, as well as cisplatin as a cancer drug, the field of metallodrugs has been flourishing. In addition to therapeutic applications, metals and metal-containing molecules have properties, such as an electrochemical or an optical signal, used to diagnose biologically relevant molecules or unravel cellular metabolism. Metals are part of the essential elements for life, and of increased attention in nutraceuticals.

Modern Medicine

Biomedical Devices, Medical Gases, Radiopharmaceuticals, New Drug Discovery, Volume 2

Pronobesh Chattopadhyay Defence Research Laboratory, India, **Danswrag Goyary** Defence Research Laboratory, India

The present volume-2 of book Title "Book Title: Modern Medicine: Biomedical Device, Medical Gas, Radiopharmaceuticals, New Drug Discovery (Volume 2)" discusses the procedures of drug approval and regulatory requirements that must be met according to the United States Food and Drug Administration (FDA), the European Medical Agency (EMA), and the Central Drug Standard Control Organization (CDSCO). In the rapidly evolving landscape of modern medicine, groundbreaking innovations have emerged that are reshaping the way we approach healthcare.

Nano-electrocatalyst for Oxygen Reduction Reaction

Fundamentals to Field Applications

Edited by **Omar Solorza Feria**, **Sathish-Kumar Kamaraj**
Instituto Tecnológico El Llano Aguascalientes, Mexico

The book covers fundamental ORR reaction kinetics theories, tools, and techniques. It also explains the nano electrocatalysts for ORR made of noble, non-noble, and nanocarbon materials. Finally, the book explores the applications of PEM fuel cells and metal-air batteries.

Nanomaterials in Industrial Chemistry

Edited by **Muhammad Faheem**, **Allah Ditta**, **Jiangkun Du**

This book provides a comprehensive exploration of nanomaterials, offering insights into their diverse morphologies and applications. Chapters delve into the industrial potential of nanocellulose-based aerogels, the future of light-driven and UV-photodetector materials, and the use of functionalized nanomaterials for wastewater restoration. It explores the pivotal role of nanobiotechnology in water purification and introduces nanopharmaceuticals as a promising frontier in clinical medicine.

Organic Chemistry

Miracles from Plants

Jeffrey John Deakin

Human benefit from the organic chemistry of plants is incalculable in terms of health, food, comfort and security. Indeed, the future well-being of humanity rests in significant measure upon a responsible relationship with the plant kingdom in order to re-establish balance in the Earth's natural environmental systems. In a highly readable volume, Organic Chemistry: Miracles from Plants presents many fascinating points of entry to the organic chemistry of a wide range of crucially-important, naturally-occurring, chemical substances which are derived from plants.

Organic Chemistry

Structure, Function, and Practice

William B. Tucker

With a focus on organic chemistry students at all levels, problems are incorporated into the body of the text in an effort to engage students more directly in chemistry. Arrowless mechanisms seek to help students develop their electron-pushing skills and intuition through repeated practice. By design this volume is more actively engaging than a traditional textbook. In addition, the historical development of ideas is presented to help frame and center these concepts for the reader. Primary and summative sources are given for all topics covered. The sources provide definitive information for the reader and ensure that all information is supported by peer-reviewed, experimental sources.

Oxadiazole in Material and Medicinal Chemistry

Priya Ranjan Sahoo, **Abhishek Saxena**, **Satish Kumar**
University of Delhi, India

The book "Oxadiazole in Material and Medicinal Chemistry" is based on the utility of organic motifs that contain oxadiazole units in their molecular architecture. Most of the common and alternate ways to synthesize oxadiazole-based probes have been discussed. The book also features some of the advanced applications of such organic motifs in liquid crystals, OLEDs, imaging agents, and medicines.

Perspectives of Quorum Quenching in New Drug Development

Edited by **Naga Raju Maddela** UTM, Ecuador,
Venkataramana Thiriveedi Duke University, USA, **Lodi Rathna Silviya** Agricultural Food Science Department, China

Antibiotic resistance in pathogen microorganisms is one of the major global concerns nowadays, especially the formation of biofilms. Quorum quenching has been practically used to control biofilm growth, and this indicates a promising hope for the development of new drugs for control of biofilm forming pathogens. This book provides a single source of information about two issues, including the biology of quorum sensing and quorum quenching and the perspectives of quorum quenching in new drug development. The text covers the latest literature from the last ten years and insights into quorum quenching and its need in medicine as an anti-virulence strategy.

4TH EDITION

Pharmaceutical Dosage Forms and Drug Delivery

Revised and Expanded

Ram I. Mahato University of Nebraska Medical Center, Omaha, USA, **Ajit S. Narang** Genentech Inc, San Francisco, USA, **Virender Kumar**

Completely revised and updated, this fourth edition elucidates the principles of pharmaceuticals, biopharmaceuticals, dosage form design, and drug delivery – including emerging new biotechnology-based treatment modalities. The authors integrate aspects of physical pharmacy, chemistry, biology, and biopharmaceuticals into drug delivery.

Polymer Supported Organic Catalysts

Edited by **Narendra Chauhan**, **Sapana Jadoun**

Polymer-supported organic catalysts are largely insoluble in most reaction solvents, which allows for easy recovery and recycling of the catalysts. They are generally stable, readily available, and environmental friendly, so they have attracted the interest of many synthetic chemists in the industrial and academic fields. In this book, different types of polymer supported catalysts based on peptides, polystyrene, polyethers, poly(acrylic acid), poly(ethylene imine), poly(2-oxazoline), poly(isobutylene), poly(norbornene), etc., as well as metals are included with their synthetic organic synthesis applications.

4TH EDITION

Practical Guide to Clinical Data Management

Susanne Prokscha Jazz Pharmaceuticals, CA, USA

The management of clinical data, from its collection during a trial to its extraction for analysis, has become critical in preparing a regulatory submission and obtaining approval to market a treatment. Groundbreaking on its initial publication nearly fourteen years ago, and evolving with the field in each iteration since then, this latest volume includes revisions to all chapters to reflect the recent updates to ICH E6, Good Clinical Practices, electronic data capture and interactive response technologies.

Practical Lubrication for Industrial Facilities

Kenneth Bannister

Series: River Publishers Series in Energy Engineering and Systems

Practical Lubrication for Industrial Facilities, Fourth Edition, is a blueprint manual for any person, department, or corporation wanting to acquire practical working knowledge in the field of industrial lubrication study and application. The book is designed to deliver the basic building blocks required to implement a practical and meaningful lubrication management program that meets and exceeds the requirements set out in the aforementioned ISO 55001 and ICML 55 standards, designed to truly define "World Class."

Predicting Solubility of New Drugs

Handbook of Critically Curated Data for Pharmaceutical Research

Alex Avdeef

In pharmaceutical research, solubility plays a key part in the assessment of pharmacokinetic risks. Poor drug absorption, reduced efficacy, excessive metabolism and adverse reactions are frequently related to issues of drug solubility. During early discovery research at pharmaceutical companies, many thousands of molecules are considered. Most are rejected due to perceived unfavorable properties. Here the author uses the so-called Wiki-pSOTM database which forms the backbone of this unique handbook. Also discussed is the emerging class of therapeutically-promising research molecules called PROTACs (proteolysis-targeting chimeras), showing a propensity for 'undruggable' targets.

Principles of Research Methodology and Ethics in Pharmaceutical Sciences

An Application Guide for Students and Researchers

Edited by **Vikas Anand Saharan** Sardar Bhagwan Singh University, India, **Hitesh Kulhari** Central University of Gujarat, Gujarat, **Hemant R Jadhav** BITS Pilani, Rajasthan

Series: *Drugs and the Pharmaceutical Sciences*

This volume presents pharmaceutical research through theoretical concepts, methodologies and ethical issues. It fulfils publication ethics course work requirements for students. Chapters have been designed to cater for the curriculum requirements of universities globally. This serves as a guide on how to apply concepts in designing experiments and transforming laboratory research into actual practice.

Purification of Biotechnological Products

A Focus on Industrial Applications

Edited by **Adalberto Pessoa Jr** University of Sao Paulo, Brazil, **Beatriz Vahan Kilikian**, **Paul Long** King's College London, United Kingdom

Series: *Drugs and the Pharmaceutical Sciences*

This outstanding text focuses on providing professionals and students working in the field of pharmaceutical and biotechnology with the background necessary for development of a product or process and with the necessary rigor required by federal regulatory agencies in the pharmaceutical industry. The material will enable teachers, lecturers and professors in biotechnology to prepare courses on basic concepts and applications for purification of biotechnological products with industrial interest.

Quantum Chemistry

Classical to Computational

Amita Dua, **Chayannika Singh**

This book discusses major developments of quantum mechanics from classical to computational chemistry. The book is student and user friendly and includes exhaustive derivations, mathematical proofs, and theorems. A series of solved numerical have been added after each topic to have a better understanding of the subject. It will be helpful to Chemistry students at undergraduate and postgraduate level, as well as those appearing in various competitive examinations. Refinery Products and Product Improvement Processes

James G. Speight CD & W Inc., Laramie, USA

Series: *Petroleum Refining Technology Series*

An industry expert details the different approaches to product improvement processes in refining technology. The differences between the processes are presented as well as the types of feedstock that can be used for each process. Relevant process data is provided, and process operations are fully described. This practical and accessible guide is written for managers, professionals and technicians as well as graduate students transitioning into the refining industry.

Semiconducting Fibers

Preparation, Advances, and Applications

Edited by **Ram K. Gupta** Pittsburg State University

This book is a comprehensive study of the properties and emerging applications of semiconducting fibers. These nanomaterials have unique optoelectronic properties: they are flexible, one-dimensional, and lightweight, and can grow in bulk, thin films, and nano-dimensions (0D, 1D, 2D, 3D). Written by experts from around the world, this book covers the fundamentals of semiconducting fibers, their fabrication, and emerging applications in electronics, optoelectronics, energy, and healthcare. Various approaches to fabricating semiconducting fibers, their characteristics, and the working principles of nano-dimensional devices are covered.

Sonochemistry

Source of Clean Energy

Edited by **Felipe López-Saucedo** Dept of Radiation Chem., UNAM, **Amira Jalil Fragoso-Medina**, **Emilio Bucio** National Uni. of Mexico

This book explores the most pertinent aspects and advancements in sonochemistry, dedicating nine chapters to fundamentals, synthesis methods, and applications. Covering ultrasound as the primary energy source, the initial chapters cover the interaction of ultrasound waves with matter and its diverse applications across various fields. The text further delves into the synthesis of nanomaterials and nanocomposites under varying reaction conditions. Finally, the book examines specific topics, including the application of sonochemistry in wastewater treatment, catalysts, sensors, meat processing, and food packaging.

β -Carbolines

A Privileged Scaffold for Modern Drug Discovery

Edited by **K.L. Ameta, Ph.D.** Mody University of Science and Technology, Rajasthan, India

β -Carbolines: A Privileged Scaffold for Modern Drug Discovery provides a summary of methods for the synthesis of various natural products engineered with the diverse β -carboline scaffold and their biological evaluation. β -Carboline and its derivatives have generated considerable interest in recent years for their versatile properties in chemistry and pharmacology. This is due to their ability to act as agonists to benzodiazepine receptors, hydroxy serotonin receptors, and intercalate into DNA, to inhibit CDK, Topoisomerase, and monoamine oxidase enzymes.

Supramolecular Synthons in Crystal Engineering of Pharmaceutical Properties

Edited by **Ashwini Kumar Nangia** University of Hyderabad, School of Chemistry Hyderabad, India

This comprehensive resource skillfully consolidates Crystal Engineering, the design of organic solids, and Supramolecular Synthons (i.e. structural hydrogen bond units) to achieve desired Pharmaceutical Properties, including solubility, dissolution, bioavailability, permeability, particle size, tableting, hydration, and mechanical strength. Covering 30 years of crystal engineering developments and pharmaceutical applications, this book will be a single and complete resource for supramolecular and structural chemists, the crystal engineering community, pharmaceutical scientists, and industrial researchers.

Sustainable Materials

The Role of Artificial Intelligence and Machine Learning

Edited by **Akshansh Mishra** Politecnico di Milano, Italy, **Vijaykumar S Jatti** Symbiosis International (Deemed) Uni, India, **Shivangi Paliwal** University of Kentucky, USA

The book explores the use of AI and ML techniques for the design, characterization, and development of prediction analysis of sustainable polymer composites. It covers topics such as stress distribution analysis, microstructure evaluation, concrete with industrial wastes, cheminformatics, crash analysis, optimization of welding processes, dimensional deviation classification, mechanical property estimation, and surface roughness classification, showcasing the potential of AI and ML in material science for sustainable development.

Synthesis of Pyrrol-based Bioconjugates

Perspectives and Applications

Edited by **Mariette M. Pereira**, **Sara M.A. Pinto**, **Lucas D. Dias**

Over the last years, the use of bioconjugation as strategy for development of more specific and directed drugs has been widely researched. For optimization of efficiency of tetrapyrrolic macrocycles efficiency as therapeutic molecules, it is relevant to promote their linking to biomolecules capable of targeting altered cells. There is no book available that combines structural modification of biomolecules and polymers with pyrrole-based compounds. This book would be of great interest for academicians, industrialists, under-graduate and graduate students of Chemistry, Biosciences and Pharmacy.

2ND EDITION

The Chemistry of Clay-Organic Reactions

Benny K.G. Theng

This book provides a comprehensive and critical summary of the vast literature on the interactions of clay minerals with organic molecules, including reaction mechanisms, and bonding modes together with their practical and industrial applications. The reader will gain an insight into the formation and properties of complexes between clay minerals and a variety of organic compounds, and the use of such complexes as sorbents and carriers of organic pollutants, pesticides, dyes, and pharmaceuticals. The book is intended for environmental and industrial chemists, organic geochemists, and soil scientists, and will appeal to academics, researchers, industry professionals, and graduate students.

The Essential Handbook of Polymer Terms and Attributes

Munmaya K Mishra, Biao Duan

This book will provide a broad knowledge of polymer science in an easy way ("Advanced Polymer Science in a Nutshell") by bringing polymer terms and attributes together in one place to facilitate idea generation for researchers and students embarking on projects related to a specific field of polymer science. The author covers important terms, from A to Z, associated with the field of "Polymers" and related area in a concise manner. This book will be a valuable resource for academic and industrial researchers such as chemists, polymer scientists, chemical engineers, pharmaceutical scientists, biomedical scientists, biotechnologists, product formulators, and materials scientists.

The Role of the Measurement and Verification Professional

Judgment and Decision-making in the Application of M&V

Steve Kromer

Series: *River Publishers Series in Energy Management*

Measurement and verification (M&V) is the accounting system for energy management. Implementing M&V as a professional requires both a broad understanding of concepts and contexts and an awareness of the fundamental tools used in estimating impacts of energy management. This book will assist those seeking to become M&V professionals by establishing the framework within which to conduct successful M&V.

The Ultimate Student's Guide to Scientific Research

Samuel J. S. Rubin, Nir Qvit

A scientific career is a long and winding or often circuitous journey. Many key factors come together for the journey to go smoothly and produce a positive outcome, however that may be defined individually. This book addresses numerous aspects of the scientific career path, including but not limited to building a strong knowledge base and foundational skills; choosing and applying to advanced degree programs; composing winning research proposals and grants; writing major types of papers and reports; collaborative research programs both with academics and industry; the process of conducting and completing research projects; career advancement; and many more topics.

A Gamer's Introduction to Programming in C#

Welcome Brave Adventurer!

Aaron Langille

The first in an ongoing series designed to take readers from zero experience to writing their own video games and interactive digital experiences using industry standard languages and tools, this book is a great way to turn a love of video games into a new love of programming. It teaches the coding ins-and-outs of how we keep track of high scores, what video game heroes and loot boxes are made of, how the dreaded RNG or, random number generation works, and much, much more. Engaging and concise, this book is appealing to both a general readership as well as course convenors and students of programming.

Advanced Computing Techniques for Optimization in Cloud

Edited by **H S Madhusudhan** Vidyavardhaka College of Engineering, India, **Punit Gupta , Pradeep Singh Rawat**

Series: Chapman & Hall/Distributed Computing and Intelligent Data Analytics

This book focuses on the current trends in research and analysis of virtual machine placement in a cloud data center. It discusses the integration of machine learning models and meta-heuristic approaches for placement techniques. Taking into consideration the challenges of energy-efficient resource management in cloud data centers, it emphasizes upon computing resources being suitably utilised to serve application workloads in order to reduce energy utilisation, while maintaining apt performance. This book provides information on fault-tolerant mechanisms in the cloud and provides an outlook on task scheduling techniques.

Advances in Networks, Intelligence and Computing

Proceedings of the International Conference On Networks, Intelligence and Computing (ICONIC 2023)

Edited by **Ashok Kumar , Geeta Sharma , Anil Sharma , Pooja Chopra , Punam Rattan**

Series: *Conference Proceedings Series on Intelligent Systems for Engineering Designs*

The year 2023 marks the 100th birth anniversary of E.F. Codd (19 August 1923 - 18 April 2003), a computer scientist, who while working for IBM invented the relational model for database management, the theoretical basis for relational databases and relational database management systems. He made other valuable contributions to computer science but the relational model, a very influential general theory of data management, remains his most mentioned, analyzed and celebrated achievement.

AI for Communication

David J. Gunkel Northern Illinois University Dekalb, IL 60115

Series: *AI for Everything*

AI for Communication offers an engaging exploration into the diverse applications of AI within the realm of communication. By bridging the gap between the scientific and engineering realms of artificial intelligence and communication, this book reveals how AI, since its inception during the Dartmouth Summer workshop of 1956, has inherently been a science of communication. Exploring key advancements such as machine translation, natural language processing, large language models, computational creativity, and social robotics, this book shows how these innovations not only disrupt, but also actively transform, human communication.

AI IQ for a Human-Focused Future

Strategy, Talent, and Culture

Seth Dobrin

Series: *Chapman & Hall/CRC Artificial Intelligence and Robotics Series*

AI IQ for a Human-Focused Future: Strategy, Talent, and Culture offers a pioneering approach to integrating artificial intelligence (AI) and generative AI (GenAI) in business, emphasizing a business strategy first mindset over a technology-centric one. The book challenges the usual hype surrounding AI, advocating for a more realistic perspective. It delves into the evolution of AI, from traditional data science and machine learning to GenAI, all through the lens of strategic business application. Unlike other texts, it moves away from case studies, favoring practical, real-world advice from extensive field experience.

AI, Blockchain, and Metaverse in Hospitality and Tourism Industry 4.0

Case Studies and Analysis

Edited by **Adel Ben Youssef** University Cote d'Azur, France, **Pushan Kumar Dutta** Amity University Kolkata, **Ruchi Doshi , Manohar Sajrani**

The book offers a critical exploration of the integration of AI, blockchain, and metaverse technology in the hospitality and tourism industry to investigate the potential of these technologies in revolutionizing the industry. This comprehensive work studies, with practical examples, how cutting-edge technologies of Industry 4.0 are transforming luxury industry into a high-touch, hyper-personalized metaverse. It explains how these technologies can be used to improve customer experience and operational efficiency in areas such as guest interaction, supply chain management, payment processing, and virtual stores.

Algorithms in Advanced Artificial Intelligence

ICAAAI-2023

Edited by **R. N. V. Jagan Mohan , Vasamsetty Chandra Sekhar , V. M. N. S. S. V. K. R. Gupta**

The most common form of severe dementia, Alzheimer's disease (AD), is a cumulative neurological disorder because of the degradation and death of nerve cells in the brain tissue, intelligence steadily declines and most of its activities are compromised in AD.

AlphaGo Simplified

Rule-Based AI and Deep Learning in Everyday Games

Mark Liu

What exactly is ML? How is it related to AI? Why is deep learning (DL) so popular these days? This book explains how traditional rule-based AI and ML work and how they can be implemented in everyday games such as Last Coin standing, Tic Tac Toe, or Connect Four. Game rules in these three games are easy to implement. As a result, readers will learn rule-based AI, deep reinforcement learning, and more importantly, how to combine the two to create powerful game strategies (the whole is indeed greater than the sum of its parts) without getting bogged down in complicated game rules.

An Introduction to Universal Artificial Intelligence

Marcus Hutter, David Quarel, Elliot Catt

Series: Chapman & Hall/CRC Artificial Intelligence and Robotics Series

An Introduction to Universal Artificial Intelligence provides a gentle introduction to Universal Artificial Intelligence (UAI), a theory that provides a formal underpinning of what it means for an agent to act intelligently in a general class of environments. First presented in Universal Artificial Intelligence (Hutter, 2004), UAI presents a model in which most other problems in AI can be presented, and unifies ideas from sequential decision theory, Bayesian inference and information theory to construct AIXI, an optimal reinforcement learning agent that learns to act optimally in unknown environments.

Anatomy of Game Design

Tom Smith

Anatomy of Game Design takes some of the most popular and beloved games of all time and dissects them to see what makes them tick. By breaking down the systems and content of each game, the underlying systems of game design are laid bare. Each game is discussed in detail, using the same methods for each game. What are the verbs of the game that give the player agency? How do those verbs fit together to form a core loop that makes the game engaging? What are the systems that power the gameplay? What is the larger flow that makes the game interesting over and over again?

Animation in Croatia

Zagreb School and Beyond

Midhat Ajanović Univ. West, Sweden

Series: *European Animation*

This book provides a comprehensive account of Croatian animation history, as well as an analysis of background factors such as political and social circumstances and cultural heritage that influenced the great international success of Croatian animators between the 1960s and 1980s. This book will be of great interest to academics, students, and professionals working and researching in the field of animation.

Applications of AI for Interdisciplinary Research

Edited by **Sukhpal Singh Gill** Queen Mary Uni London, UK.

The proliferation and successful deployment of AI algorithms are fueling these changes, which can be seen in fields as disparate as healthcare and emerging IoT applications. The intersection between multiple fields, including math, science, and healthcare, is where the most significant theoretical and methodological problems of AI may be found. In order to gather, integrate, and synthesise the many results and viewpoints in the connected domains, refer to it as interdisciplinary research. In light of this, the theory, techniques, and applications of machine learning and AI, as well as how they are utilised across disciplinary boundaries, are the main areas of this research topic.

Artificial Intelligence and Ethics

A Field Guide for Stakeholders

Tarnveer Singh

This book uncovers Artificial Intelligence, benefits it brings as well as the ethical dilemmas. The rise of AI and super-intelligent AI raises ethical issues. It will guide stakeholders such as scientists, ethicists and policymakers to consider the complexities AI brings and how to navigate these. AI brings complex ethical issues that need to be resolved and this book brings forward the benefits and drives readers away from potential risks around this new technology to help business growth. The book covers lots of case studies to prove both the potential benefits but also real-life examples of what can happen if risk is not managed effectively.

Artificial Intelligence and Large Language Models

An Introduction to the Technological Future

Kutub Thakur New Jersey City University, New Jersey, USA, **Helen G. Barker**, **AI-Sakib Khan Pathan**

Having been catapulted into public discourse in the last few years, this book serves as an in-depth exploration of the ever-evolving domain of Artificial Intelligence, Large Language Models and ChatGPT. It provides a meticulous and thorough analysis of Artificial Intelligence (AI), ChatGPT technology, and their prospective trajectories given the current trend, in addition to tracing the significant advancements that have materialized over time. Illustrated and organized in an accessible manner, this textbook contains particular appeal to students and course convenors at the undergraduate and graduate level, as well as a reference source for general readers.

Artificial Intelligence in Forecasting

Tools and Techniques

Sachi Mohanty VIT-AP University, India, **Preethi Nanjundan**, **Tejaswini Kar** KIIT deemed to be University, India

Can you forecast the future value by considering historical data? Accurate forecasting requires more than just plugging in historical data into models. Readers will find the latest techniques used by managers in business today, discover the importance of forecasting and learn how it is accomplished. And readers will develop the necessary skills to meet the increased demand for thoughtful and realistic forecasts.

Artificial Intelligence of Things (AIoT)

New Standards, Technologies and Communication Systems

Kashif Naseer Qureshi Dept of Electronic & Computer Engineering, Uni. of Limerick, Ireland, **Thomas Newe** University of Limerick, Ireland

This book is devoted to the new standards, technologies, and communication systems for Artificial Intelligence of Things (AIoT) networks. Smart and intelligent communication networks have gained significant attention due to the combination of AI and IoT networks to improve human and machine interfaces and enhance data processing and services. AIoT networks involve the collection of data from several devices and sensor nodes in the environment. AI can enhance these networks to make them faster, greener, smarter, and safer. Computer vision, language processing, and speech recognition are some examples of AIoT networks.

Bioinformatics for Oral Cancer

Current Insights and Advances

Edited by **Maheś KP , Raghavendra Amachawadi , Shiva Prasad Kollur , Chandan Shivamallu**

Bioinformatics for Oral Cancer: Current Insights and Advances serves as a comprehensive guide offering a deep dive into the multifaceted landscape of oral cancer research and bioinformatics. Readers will uncover a wealth of knowledge, starting with foundational chapters introducing bioinformatics and establishing the backdrop of oral cancer. The book's keen focus extends to gene expression profiles and the intricacies of gene sequencing in the context of oral cancer progression.

Bio-Inspired Computational Paradigms

Security and Privacy in Dynamic Smart Networks

Edited by **Vijayalakshmi S , Gayathri SP** The Gandhigram Rural Institute Deemed to be University, India, **Samiksha Shukla** Christ University, India, **Parma Nand** Sharda University, India, **Balamurugan Balusamy**

Smart cities with various technological innovations have played an important role and influenced society as well. Due to voluminous data transactions within smart cities, security and privacy concerns need to be dealt with. Though taking care of safety and privacy is challenging, it is essential for a smart city to understand the bio-inspired computing paradigms. This book discusses the utilization of bio-inspired computing procedures for effective computational devices.

2ND EDITION

Blender 2D Animation

The Complete Guide to the Grease Pencil

John M. Blain Toormina, New South Wales, Australia

This book describes how to access the Grease Pencil component in Blender and create 2D Animation within the Blender 3D environment. It is assumed that the reader has no previous knowledge of the Blender program and treats 2D Animation using the Grease Pencil as a standalone application. Grease Pencil is a component of the 3D modeling and animation program, Blender. Blender is a free open-source 3D Computer Graphics software toolset used for creating animated films, visual effects, art, 3D printed models, motion graphics, interactive 3D applications, virtual reality and computer games.

Cloud of Things

Foundations, Applications, and Challenges

Edited by Jitendra Kumar NIT Tiruchirappalli, India, **G. R. Gangadharan** NIT Tiruchirappalli, India, **Ashutosh Kumar Singh** National Institute of Technology, India, **Chung-Nan Lee**

Cloud computing is the on-demand availability of computer system resources, especially data storage and computing power, without direct active management by the user. This book explores algorithms, protocols, and system design principles of key smart technologies including cloud computing and the internet of things. Discusses the system design principles in cloud computing along with artificial intelligence, machine learning, and data analytics applications. Presents blockchain-based solutions, cyber-physical system applications, and deep learning approaches to solving practical problems.

Cloud Security

Concepts, Applications and Practices

Edited by Jamuna S Murthy , Siddesh G M M S Ramaiah Institute of Technology, Bangalore, **Srinivasa K G** International Institute of Information Technology, Naya Raipur

This book is a comprehensive work that comprises latest development and technologies, challenges, and best practices in the industry. It covers the fundamentals of cloud computing, including deployment models, service models, and the benefits of cloud computing, followed by critical aspects of cloud security, including risk management, threat analysis, data protection, identity and access management, and compliance. The book explores the latest security technologies, such as encryption, multi-factor authentication, and intrusion detection and prevention systems, and their role in securing the cloud environment.

Cognitive Predictive Maintenance Tools for Brain Diseases

Design and Analysis

Edited by **Shweta Gupta** Woxsen University, India
Series: *Chapman & Hall/CRC Internet of Things*

This book involves the design, analysis, and application of various Cognitive Predictive Maintenance Tests with help of tools like vibration analysis tools, Ultrasonic analysis tools, Infrared analysis tools, Oil analysis tools, Laser-shaft alignment tools, and Motor circuit analysis tools in the prediction of various Cognitive diseases like Epilepsy, Parkinson's Disease, Alzheimer's, depression, etc. which is need of the day since there are no proper medical tests available to predict the diseases in remote areas at an early stage. Various emerging technologies are analyzed for the design of tests.

Computational Intelligence for Oncology and Neurological Disorders

Current Practices and Future Directions

Edited by **Mrutyunjaya Panda** Utkal University, Bhubaneswar, **Ajith Abraham** FLAME University, Lavale, Maharashtra, **Biju Gopi** Medical Trust Hospital, Ernakulam, Kerela, **Reuel Ajith**

Series: *Chapman & Hall/CRC Computational Biology Series*

The book presents research and review papers in the subject of intelligent systems for computational oncology and neurological complications. It gathers high-quality original contributions that contain the latest breakthroughs or applications of practical use and value. It integrates theoretical, applied, computational, experimental, and clinical research, drawing from work in computer science, physics, mathematics, medical science, psychology, cognitive science, cancer, and neurobiology, among other fields. Researchers in neurology or oncology who are interested in computational methods will find it very interesting.

Create Stunning Renders Using Corona in 3ds Max

Guiding the Next Generation of 3D Renderers

Margarita Nikita

The book progresses to the creation of materials, their application to the scene, and the utilization of Corona's libraries and presets for efficiency. The potentials of Corona are detailed using a bedroom scene as an example. This practical guide demystifies the complexities of 3D rendering without delving into modeling techniques. With design studios increasingly incorporating 3D renderings into their proposals, this book serves as an invaluable resource for professionals and aspiring renderers alike.

Data Analytics and Machine Learning for Integrated Corridor Management

Yashawi Karnati , Dhruv Mahajan , Tania Banerjee Prof, Uni of Florida, Rahul Sengupta , Packard Clay , Ryan Casburn , Nithin Agarwal , Jeremy Dilmore , Anand Rangarajan Prof, Uni of Florida, Sanjay Ranka University of Florida, Gainesville, USA

In an era defined by rapid urbanization and ever-increasing mobility demands, effective transportation management is paramount. This book takes readers on a journey through the intricate web of contemporary transportation systems, offering unparalleled insights into the strategies, technologies, and methodologies shaping the movement of people and goods in urban landscapes. With insights into traffic data visualization and operational performance measures, this book empowers traffic engineers and administrators to design 21st-century signal policies that optimize mobility, enhance safety, and shape the future of urban transportation.

Data Mining with Python

Theory, Application, and Case Studies

Di Wu

Series: *Chapman & Hall/CRC The Python Series*

This book focuses on the hands-on approach to learning Data Mining. It showcases how to use Python Packages to fulfill the Data Mining pipeline, which is to collect, integrate, manipulate, clean, process, organize, and analyze data for knowledge. It is designed to give students, data scientists, and business analysts an understanding of Data Mining concepts in an applicable way. Through interactive tutorials that can be run, modified, and used for a more comprehensive learning experience, this book will help its readers to gain practical skills to implement Data Mining techniques in their work.

Data Visualization for People of All Ages

Nancy Organ

Series: *AK Peters Visualization Series*

The book is a field guide to visual literacy, born from the author's personal experience working with world-class scholars, engineers, and scientists. By walking through the different ways of showing data—including color, angle, position, and length—you'll learn how charts and graphs truly work so that no visualization is ever a mystery or out of reach. It doesn't stop at what fits on a page, either. Written with accessibility in mind, this book invites everyone to the table to share the joy of one of today's most necessary skills. Perfect for home or classroom use, this friendly companion gives people of all ages everything they need to start visualizing with confidence.

Data-Centric Artificial Intelligence for Multidisciplinary Applications

Edited by **Parikshit N Mahalle** VIIT, Pune, **Namrata Nishant Wasatkar** VIIT, Pune, **Gitanjali R. Shinde** Sinhgad Inst. SPPU, Pune, India.

This book explores the need for a data-centric AI approach and its application in the multidisciplinary domain, compared to a model-centric approach. It examines the methodologies for data-centric approaches, the use of data-centric approaches in different domains, the need for edge AI and how it differs from cloud-based AI. It discusses the new category of AI technology, "data-centric AI" (DCAI), which focuses on comprehending, utilising, and reaching conclusions from data. By adding machine learning and big data analytics tools, data-centric AI modifies this by enabling it to learn from data rather than depending on algorithms.

Decentralized Music

Exploring Blockchain for Artistic Research

Edited by **Paulo de Assis** , **Adam Łukawski**

This book offers a thorough examination of the potential of blockchain to transform musical practices. Moving beyond blockchain's financial applications, this book presents various perspectives on how this technology plays an important role in a creative, conceptual and philosophical rethinking of the current modes of artistic creation. Including contributions from leading researchers in music, arts, and technology, the chapters of the book address blockchain's capacity to reconfigure notions of agency, authorship, authenticity, provenance, and ownership in music. Taken together, these chapters challenge conventional centralized mechanisms in music creation and dissemination.

Deep Learning based applications for Multimedia Processing Applications

Volume 1 and 2

Edited by **Uzair Aslam Bhatti**, **Huang Mengxing**, **Jingbing Li**, **Sibghat Ullah Bazai**, **Muhammad Aamir**

Divided into two volumes, Volume One begins by introducing the fundamental concepts of deep learning, providing readers with a solid foundation to understand its relevance in multimedia processing. Volume Two delves into advanced topics such as convolutional neural networks, recurrent neural networks, and generative adversarial networks, explaining their unique capabilities in multimedia tasks. Readers will discover how deep learning techniques enable accurate and efficient image recognition, object detection, semantic segmentation, and image synthesis. The book also covers video analysis techniques, including action recognition, video captioning, and video generation.

Deep Learning in Internet of Things for Next Generation Healthcare

Edited by **Lavanya Sharma** Amity university, Noida, India, **Pradeep Kumar Garg** IIT Roorkee, India.

This book presents latest developments in deep learning-enabled healthcare tools and technologies and offers practical ideas of using IoT with deep learning (motion-based object data) to deal with human dynamics, and challenges including critical applications domains, technologies, medical imaging, drug discovery, insurance fraud detection and solutions to handle relevant challenges. This book offers real-time healthcare applications, novel solutions, current open challenges, and future of deep learning for next generation healthcare.

Deep Learning in Medical Image Analysis

Recent Advances and Future Trends

Edited by **R. Indrakumari** Galgotias University, India, **T. Ganesh Kumar** Galgotias Uni., **D. Murugan** Manonmaniam Sundaranar University, India, **Sherimon P.C.**

Series: *Artificial Intelligence in Smart Healthcare Systems*

The proposed book is designed as a reference text and provides a comprehensive overview of conceptual and practical knowledge about deep learning in medical image processing techniques. The post-pandemic situation teaches us the importance of doctors, medical analysis, and diagnosis of diseases in a rapid manner. This book provides a snapshot of the state of current research between deep learning, medical image processing, and healthcare with special emphasis on saving human life. The chapters cover a range of advanced technologies related to patient health monitoring, predicting diseases from genomic data, and detecting artefactual events in vital signs monitoring data.

Designing Games Meant for Sharing

Ioana-Iulia Cazacu Lead Game Designer at Mojiworks Limited

This book talks about the importance of social mechanics in games and how these mechanics evolved across time to accommodate new technologies and new social contexts. It looks at the innovation happening in the field of new age social games, discussing in detail what has been learnt from designing for the younger generation, how these findings can inform game design philosophy, and how this can be applied to game development more broadly. This book will appeal to game designers and students of game design looking to learn how to apply learnings from social game design in their own games.

Developing Web Sites with HTML, CSS and JavaScript

Efrem G. Mallach Rhode Island College, Providence, and Kea Company, New Bedford, Massachusetts, USA

Covering the three underlying technologies of Web pages: HTML, CSS, and JavaScript, this book is a one-stop guide to getting started in web development, be it in a class or as a solo-learner. Starting with no prerequisites beyond minimal exposure to programming, this book guides readers in an accessible fashion through modern page layout methods to building a complete site. Building knowledge from the ground-up, this book appeals to those looking to learn web development from a range of backgrounds, be it academic, professional or personal.

DevOps for Data Science

Alex Gold

Series: *Chapman & Hall/CRC Data Science Series*

Data Scientists are experts at analyzing, modelling and visualizing data but, at one point or another, have all encountered difficulties in collaborating with or delivering their work to the people and systems that matter. Born out of the agile software movement, DevOps is a set of practices, principles and tools that help software engineers reliably deploy work to production. This book takes the lessons of DevOps and applies them to creating and delivering production-grade data science projects in Python and R.

Digital Personality

A Man Forever Volume 2: Technical Aspects

Kuldeep Singh Kaswan Galgotias Univ, **Jagjit Singh Dhattarwal** Koneru Lakshmaiah Education Foundation, **Anand Nayyar** Duy Tan University, Vietnam

Digital Personality has attracted the interest of academics from a wide range of disciplines, including psychology, human-computer interaction, and character modeling. This book provides an overview of the character dimensions and how technology is aiding this area of study. It offers a fresh portrayal of character from several angles. It also discusses the applications of this new field of study.

Digital Personality: A Man Forever

Volume 1: Introduction

Kuldeep Singh Kaswan Galgotias Univ, **Jagjit Singh Dhattarwal** Koneru Lakshmaiah Education Foundation, **Anand Nayyar** Duy Tan University, Vietnam

The main goal of this book is to enable a seamless and natural human-computer interaction. This will provide better personalized experience. Further, it will influence the performance of the user, wherein they will have the support of the machines to achieve tasks in the most efficient way. This book is the first of a kind in introducing Digital Personality. It provides an overview of the character dimensions and how state-of-the-art technologies would accommodate such a research field.

Digital Transformation in Your Manufacturing Business

A Made Smarter Guide

Will Kinghorn

This book will give you a straightforward guide to manufacturing technologies, examples of how they're used, as well as the tools and techniques you'll need to get started. Each technology is covered on a single page meaning you can understand it quickly and decide if it's worth you investigating it for your business. In addition to the book, the online resources will provide you with templates and examples to help you get started quickly, and at every stage there are suggestions for the key terms you need to find more information appropriate to your industry. Get started with making informed decisions, embracing technologies, and transforming your business

Digital Transformation Roadmap

From Vision to Execution

Hamed Taherdoost University Canada West, Canada

This book offers a comprehensive exploration of the Fourth Industrial Revolution by presenting a roadmap for leveraging technology to revolutionize businesses, strategy, and innovation. Embark on a journey that unveils the dynamic interplay between technology and business. Discover the evolution of tech lifecycles, the significance of digital transformation, and the key domains of change reshaping industries. Whether you're a business leader, strategist, or tech enthusiast, this book equips you with actionable insights, practical strategies, and a forward-thinking mindset to drive change and thrive in the digital landscape.

Disruptive Technologies for Sustainable Development

Edited by **G. Nagappan**, **V Uma Rani**

We feel greatly honoured to have been assigned the job of organizing the AICTE Sponsored International Conference on Application of AI, ML, DL, Big Data on Recent Societal Issues (ICARSI/2023) on April 21 & April 22, 2023 at Saveetha Engineering College. The international conference is a platform that brings together the brightest minds from across the globe to share their ideas and insights on the recent societal issues with Artificial intelligence, Machine Learning, Deep Learning, Big data and emerging technologies.

Disruptive technologies in Computing and Communication Systems

Proceedings of the 1st International Conference on Disruptive technologies in Computing and Communication Systems

Edited by **K. Venkata Murali Mohan**, **M. Suresh Babu**

The 1st International Conference on Disruptive Technologies in Computing and Communication Systems (ICDTCCS - 2023) has received overwhelming response on call for papers and over 119 papers from all over globe were received. We must appreciate the untiring contribution of the members of the organizing committee and Reviewers Board who worked hard to review the papers and finally a set of 69 technical papers were recommended for publication in the conference proceedings.

Domain-Specific Computer Architectures for Emerging Applications

Machine Learning and Neural Networks

Chao Wang University of Science and Technology of China, Jiangsu, China

With the end of Moore's Law, Domain-Specific Architectures (DSA) have become a crucial mode of implementing future computing architectures. This book discusses the system-level design methodology of DSAs and their applications, providing a unified design process that guarantees functionality, performance, energy efficiency and real-time responsiveness for the target application. Providing cutting-edge discussion of big data and artificial intelligence scenarios in contemporary industry and typical DSA applications, this book appeals to industry professionals as well as academicians researching the future of computing in these areas.

Dramatic Storytelling and Narrative Design

A Writer's Guide to Video Games and Transmedia

Ross Berger

This book provides an industry professional's first-hand perspective on narrative design's practical usage, day-to-day roles and responsibilities, and keys to breaking in and succeeding. The book delves into the foundations of compelling storytelling through structural analysis and character archetype breakdowns. This book will be of great interest to all those interested in the craft of storytelling, narrative design, and game writing.

Empowering Digital Education with ChatGPT

From Theoretical to Practical Applications

Edited by **Mohamed Lahby**

This book explores the transformative potential of the ChatGPT tool within education, shedding light on the opportunities that arise through the integration of the ChatGPT tool into various aspects of the learning process. It serves as a platform for the community to share cutting-edge research ideas concerning the use of the ChatGPT tool in digital education. Readers will discover how the ChatGPT tool can enhance student engagement, foster personalized learning experiences, facilitate intelligent tutoring systems, support virtual classroom interactions, and revolutionize assessment and feedback mechanisms.

Energy Efficiency and Robustness of Advanced Machine Learning Architectures

A Cross-Layer Approach

Alberto Marchisio, Muhammad Shafique

This book tackles these challenges by exploiting the unique features of advanced ML models and investigates cross-layer concepts and techniques to engage both hardware and software-level methods to build robust and energy-efficient architectures for these advanced ML networks. More specifically, this book improves the energy efficiency of complex models like CapsNets, through a specialized flow of hardware-level designs and software-level optimizations exploiting the application-driven knowledge of these systems and the error tolerance through approximations and quantization.

Essential Programming for the Technical Artist

Chris Roda

This book is based on a successful curriculum designed to elevate technical artists, with no programming experience, up to essential programming competency as quickly as possible. Instead of abstract, theoretical problems, the curriculum employs familiar applications encountered in real production environments to demonstrate each lesson. Written with artists in mind, the book introduces novice programmers to the advantageous world of Python programming with relevant and familiar examples. Any digital artists, (not just technical artists), will find this book helpful in assisting with day-to-day production activities.

3RD EDITION

Essentials of Computer Architecture

Douglas Comer

This easy-to-read textbook provides an introduction to computer architecture, focusing on the essential aspects of hardware that programmers need to know. Written from a programmer's point of view, this book covers the three key aspects of architecture: processors, physical and virtual memories, and input-output (I/O) systems. Suitable for a one-semester undergraduate course, this clear, concise, and easy-to-read textbook offers an ideal introduction to computer architecture for students studying computer programming.

Explainable AI (XAI) for Sustainable Development

Trends and Applications

Edited by **Lakshmi D** VIT Bhopal University, **Ravi Shekhar Tiwari** IIT-Patna, **Rajesh Kumar Dhanaraj** Symbiosis International (Deemed University), **Seifedine Kadry**

This book presents innovative research works to automate, innovate, design, and deploy AI for Real-World Applications. It discussed AI applications in major cutting-edge technologies and details about deployment solutions for different applications for sustainable development. The application of Blockchain techniques illustrates the ways of optimisation algorithms in this book. The challenges associated with AI deployment are also discussed in detail, and edge computing with machine learning solutions is explained.

Ethical Artificial Intelligence in Power Electronics

Edited by **Tarandeep Kaur Bhatia** University of Petroleum and Energy Studies, India, **Salma El Hajjami** Computer science department, Faculty of science, Ibn Zohr University, **Keshav Kaushik** UPES, Dehradun, India, **Gayo Diallo** Bordeaux Population Health Research Center, University of Bordeaux, France, **Mariya Ouaissa**, **Inam Ullah Khan** Department of Electronic Engineering, SEAS, Isra University, Islamabad Campus

The main essential points of this book will cover all the most advanced developments and future prospects viewpoints for the powerful energy achievable in the vehicles. The data, insights, facts, and information presented will assist as well as support the scholars, researchers, authors, students to learn the basic technical specifications of power energy used in the vehicles. Also, this knowledge will make the authors learn and examine the optimization of vehicular power when the vehicles are stabbed in an extremely congested VANETs environment. This book contributes a unique strategy for the optimization of vehicular power using Ethical-AI methods.

Exploring Blockchain Applications

Management Perspectives

Edited by **Sezer Bozkus Kahyaoglu** Uni of South Africa Financial Gov Dep, South Africa, **Vahap Tecim**

The book reviews the development process of blockchain algorithms and examples of their applications in different sectors. The opportunities and challenges of blockchain implementations that arise in making technological innovations usable in corporate structures are discussed. In this respect, it aims to deal with both the conceptual framework and the real challenges and opportunities encountered in practice in blockchain applications. As such, it presents suggestions on practical blockchain applications to the readers on a scientific basis.

Federated Learning

Unlocking the Power of Collaborative Intelligence

Edited by **M. Irfan Uddin**, **Wali Khan Mashwani**

Series: *Chapman & Hall/CRC Artificial Intelligence and Robotics Series*

With detailed case studies and step-by-step implementation guides, this book shows how to build and deploy federated learning systems in real-world scenarios – such as in healthcare, finance, IoT, and edge computing. Whether you are a researcher, a data scientist, or a professional exploring the potential of federated learning, the book will empower you with the knowledge and practical tools needed to unlock the power of federated learning and harness the collaborative intelligence of distributed systems.

CRC Press
September 2024:216

Federated Learning for Smart Communication using IoT Application

Edited by **Kaushal Kishor** Abes Inst. of Tech., **Parma Nand** Sharda University, India, **Vishal Jain** Sharda University, Greater Noida, India, **Neetesh Saxena** Cardiff University, UK, **Gaurav Agarwal** Galgotias University, India, **Rani Astya**

Series: *Chapman & Hall/CRC Cyber-Physical Systems*

The book aims to demonstrate the effectiveness of federated learning in high-performance information systems and informatics-based solutions for addressing current information support requirements. To address heterogeneity challenges in IoT contexts, it analyses the development of personalized federated learning algorithms capable of mitigating the detrimental consequences of heterogeneity in several dimensions. It includes case studies of IoT-based human activity recognition to demonstrate the efficacy of personalized federated learning for intelligent IoT applications.

Formal Methods for Managing and Processing Ontology Alignments

Marcin Pietranik Wroclaw University of Science and Technology Wybreze St Wyspinaskiego 27 Wroclaw Poland 50-370

Ontologies are formal knowledge representation methods that can provide means for a shared understanding of a given domain. This book provides complete ontology alignment lifecycle, including modelling, methods, and maintenance processes. Summarizing the author's research from the past ten years, this book consolidates findings previously published in prestigious international journals and presented at leading conferences. The book introduces basic mathematical concepts, and later chapters build upon these foundations, but each focusses on specific aspects of ontology alignment, making the content accessible and easy to follow.

Foundations of AI and Robotics

Two Volume Set

Wendell Chun

Artificial Intelligence (AI) is a complicated science that combines philosophy, cognitive psychology, neuroscience, mathematics and logic (logicism), economics, computer science, computability, and software. Meanwhile, robotics is an engineering field that compliments AI. There can be situations where AI can function without a robot (e.g. Turing Test) and robotics without AI (e.g. teleoperation), but in many cases, each technology requires each other to exhibit a complete system: having "smart" robots and AI being able to control its interactions (i.e., effectors) with its environment.

Future Tech Startups and Innovation in the Age of AI

Edited by Inam Ullah Khan Department of Electronic Engineering, SEAS, Isra University, Islamabad Campus, **Hamed Taherdoost** University Canada West, Canada, **Mitra Madanchian** University Canada West, **Mariya Ouaisa**, **Salma El Hajjami** Computer science department, Faculty of science, Ibn Zohr University, **Hameedur Rahman**

Entrepreneurs, engineers, practitioners have already moved towards AI based solutions to reshape businesses. AI/ML will create possibilities, opportunities for improving human life style. AI enabled startups will work on cost effective solutions to solve difficult problems. Recently, many research companies are interested in providing solutions and investing a lot in AI based startups. AI computing tech companies will help to model human speech recognition systems. Also, AI based startups will focus on perception and reasoning of autonomous robotic systems. AI/ML based tech startups will introduce smart online education system for future pandemics.

Game AI Uncovered

Volume Two

Edited by Paul Roberts

Game AI Uncovered: Volume Two continues the series with the collected wisdom, ideas, tricks and cutting-edge techniques from 22 of the top game AI professionals and researchers, from around the world. Beginners to the area of game AI, along with professional developers, will find a wealth of knowledge that will not only help in the development in your own games but will spark ideas for new approaches.

Game Design Deep Dive

Shooters

Joshua Bycer

This entry in the Game Design Deep Dive series takes a look at the shooter genre. One that has grown with the times and whose influence can be felt from indie teams to major studios. Josh Bycer discusses 30 plus year history of one of games industry's most popular genres to talk about how to design one your own. This book is perfect for students and designers to learn about one of the most popular genres on the market.

Game Design Deep Dive

Soulslike

Joshua Bycer

For this entry in the Game Design Deep Dive series, it's Joshua Bycer takes a look at how the "soulslike" genre with its unique design, became popular over the 2010's and culminating with one of the bestselling games of 2022 with Elden Ring.

Game Economy Design

Metagame, Monetization and Live Operations

Charlie Czerkawski

This book provides a comprehensive overview of game economy design. It begins with a high-level overview, then utilises subsequent chapters to break this down into finer details, showing methods to approach the various problems and challenges involved in creating an intricate game economy and meta game experience. The content of the book extends to associated and related fields such as monetisation and live operations. The book will appeal to all game design professionals and students of game design that wish to gain a deeper understanding of how to develop game economies.

2ND EDITION

Getting Started in ZBrush

An Introduction to Digital Sculpting and Illustration

Gregory S. Johnson Savannah College of Art and Design, Georgia, USA

Beginning with the fundamentals of digital sculpting as well as a thorough introduction to the user interface, Getting Started in ZBrush will have you creating a variety of professional-level 3D models in no-time. More than just another button-pushing manual, this comprehensive guide is packed with start-to-finish projects that ease you into the workflow of the program, while at the same time providing tips and tricks that will allow you to achieve certain tasks much more quickly. After progressing through the tutorials, you will be shown how to customize brushes, materials, scripts, and the interface so that you can utilize these tools to their full advantage.

Graphic Design for Board Games

Daniel Solis

Series: CRC Press Guides to Tabletop Game Design

Board games are increasingly recognized as an artform of their own, but their design and aesthetics are just as important as their gameplay mechanics. In this handbook, art director and graphic designer Daniel Solis offers his 20+ years of expertise in graphic design in tabletop gaming. With a sense of humor, plenty of examples, and simple tips, Graphic Design for Board Games covers everything from typography to retail presence. Learn how to effectively use graphic design elements to enhance player experience. Create stunning game components, clear rulebooks, and effective game boards that will keep players engaged.

Great Games Need Great Leaders

Multiclassing to Lead Game Development Teams

Matthew John Dyet

This book brings together the knowledge and perspectives of numerous past and present games industry leaders and practitioners to form a clear picture of how leadership operates in a game development studio. It identifies the ways in which things are changing or can change for the better in the games industry and provides a set of tools for the reader to use in their own professional practice. This book will be of great interest to anybody interested or currently working in games development, particularly those who are producers, project managers, product owners, scrum masters, leads and associate leads.

Green Automation

Increasing Sustainability, From Industry to Our Home

Francisco José Gomes da Silva ISEP - School of Engineering, Polytechnic of Porto

Environmental issues are a growing concern for our society, and should deserve increased attention, given the extremely negative climate changes which have been taking place. Emissions of greenhouse gases, excessive dependence on fossil fuels, growing consumption of power energy, and exacerbated consumption of materials are some of the problems that need to be addressed urgently. Some of these problems can be overcome through ingenious solutions based on automation.

Guide to SRv6 Network Deployment

Edited by **Minwei Jin , Zhenbin Li , Lanjun Luo , Weidong Li**

Series: Data Communication Series

This book shows how SRv6 can be used in real-world network deployments, providing real-world project cases from multiple carriers and enterprises. This book is a valuable reference for academics and students majoring in data communications, as well as data communications professionals and managers responsible for network planning and design, and network operation and maintenance management.

Handbook of Digital Twins

Edited by **Zhihan Lyu**

Over the last two decades, Digital Twins have become the intelligent representation of future development in industrial production and daily life. Consisting of over 50 chapters by more than 100 contributors, this comprehensive handbook explains the concept, architecture, design specification and application scenarios of Digital Twins. This book aims to provide an in-depth understanding and reference of Digital Twins to technical personnel in the field, students and scholars of related majors, and general readers interested in intelligent industrial manufacturing.

Historical Simulation and Wargames

The Hexagon and the Sword

Riccardo Masini

This book is a comprehensive study on analog historical simulation games, exploring both their theoretical concepts and practical solutions. It considers the various ways used by simulation games to depict the different dynamics of historical events and analyzes how commercial analog miniature and wargames can become valuable tools for historical research. The book will be of great interest to those curious about the potential applications of such a powerful research and experimental tool for historical, sociologic, and anthropologic research, as well as wargaming and board gaming enthusiasts looking to gain a deeper understanding of the inner workings of historical simulations.

How and Why We Make Games

The Creative Confusion

Marta Fijak, Artur Ganszyniec

This book delves into the intricate realms of games and their creation, examining them through cultural, systemic, and, most notably, human lenses. It explores diverse themes like authorship, creative responsibility, the tension between games as a product and games as a form of cultural expression, and the myth of a universal audience. This book is written for readers passionate about the craft of making games, including journalists and industry professionals. It offers a more humanistic perspective on games, presented by experienced writers who know the intricacies of game development.

Human Machine Interaction in the Digital Era

Towards Conversational Artificial Intelligence

Edited by **J Dhillipan, V Saravanan, R Agusthiyar**

The Human Machine Interaction in the Digital Era (ICHMIDE) 2023 conference aims to address the main issues of concern in the design issues with a particular emphasis on the design and development of interfaces for autonomous robots. Its main objective is to provide an international forum for the dissemination and exchange of up-to-date scientific information on research related to integrated human/machine systems at multiple scales, and includes areas such as human/machine interaction, engineering mathematical models, assistive technologies, system modelling, design, testing and validation

Image Processing and Machine Learning

Erik Cuevas, Alma Nayeli Rodríguez

Series: (ISC)2 Press

Image processing and machine learning are used in conjunction to analyze and understand images. Where image processing is used to pre-process images using techniques such as filtering, segmentation and feature extraction, machine learning algorithms are used to interpret the processed data through classification, clustering and object detection. This book serves as a textbook for students and instructors of image processing, covering the theoretical foundations and practical applications of some of the most prevalent image processing methods and approaches.

Image Processing Recipes in MATLAB®

Oge Marques NVIDIA and Florida Atlantic University, Boca Raton, USA, **Gustavo Benvenuto Borba** Federal University of Technology-Paraná, Curitiba, Brazil

Series: Chapman & Hall/CRC Computer Science and Engineering Recipes Series

Leveraging the latest developments in MATLAB and its image processing toolbox, this 'cookbook' is a collection of 30 practical recipes for image processing, ranging from foundational techniques to recently published algorithms. Presented in a clear and meaningful sequence, these recipes are prepared with the reader in mind, allowing one to focus in on particular topics or read as a whole from cover to cover. The book serves as a concise and readable practical reference to deploy image processing pipelines in MATLAB quickly and efficiently.

iMind

Artificial and Real Intelligence

Mohamed I. Elmasry

Why has so much of our recent attention been focused on AI while RI is all but forgotten? And why are we spending so much energy debating the future of AI rather than that of its human original? This book is the first comprehensive popular science account of AI and RI. Unique in scope, it discusses the interdisciplinary science of AI, RI, smartphones, smart sensors, microchips, and the brain-mind connection. It explores what is beyond the physical, including mindfulness and spirituality, how they can impact our well-being in the here and now, and how they could help us all to achieve a healthy and fulfilling old age.

Impact of Artificial Intelligence on Society

Edited by Sumit Tripathi ATLAS SkillTech University, India,
Joanna Rosak-Szyrocka Czestochowa University of Technology, Poland

The book presents a comprehensive and interdisciplinary exploration of the impact of AI on various sectors of society to foster a greater understanding of the opportunities and challenges presented by this transformative technology. It explores the impact AI has had on varied sectors of society, including healthcare, education, the workplace, and the economy. It provides a holistic view of this fast-growing technology by critical study of the possible benefits and drawbacks linked with the application of AI in many industries. The book also examines the ethical, social, and economic implications of AI and the potential risks and challenges associated with its use.

Industry Automation: The Technologies, Platforms and Use Cases

Edited by Pethuru Raj , Abhishek Kumar , Ananth Kumar , Neha Singhal

Series: River Publishers Series in Automation, Control and Robotics

This book details cutting-edge technologies, versatile tools, adaptive processes, integrated platforms, and best practices of digitized systems. With the faster maturity and stability of digitization and digitalization technologies, all kinds of physical, mechanical, and electrical systems in our everyday environments (homes, hotels, hospitals, manufacturing floors, etc.) have become digitized systems.

Integration of Cloud Computing and IoT

Trends, Case Studies and Applications

Edited by Prabhdeep Singh , Mohit Angurala

Series: Emerging Technologies

This book presents cutting-edge research, advanced techniques, and practical applications of the integration of Cloud Computing and IoT. It explores the practical challenges associated with the development and deployment of Cloud Computing and IoT-based solutions, including security, privacy, and interoperability issues. It includes various case studies, including Smart Cities, Network Security, Healthcare, Smart Urban Sensing, Agriculture, Mining, Railways, and Crime Investigations. It offers in-depth insights, developments, and practical applications, showcasing helpful tools and techniques in IoT and Cloud Computing.

Intelligent Security Solutions for Cyber-Physical Systems

Edited by **Vandana Mohindru Sood**, **Yashwant Singh**,
Bharat Bhargava, **Sushil Kumar Narang**

Series: *Chapman & Hall/CRC Cyber-Physical Systems*

This text addresses the security aspects of intelligent cyber-physical systems in a comprehensive manner. It discusses various attack detection methods, intelligent solutions for securing cyber-physical systems, lightweight cryptographic solutions, and classification of network abnormalities. The book also elaborates on the explainable unsupervised machine learning, intelligent data management framework, and machine learning approaches for continuous detection of concept drift. It is primarily aimed at graduate students, and academic researchers in the fields of computer science and engineering, information technology, and electronics and communication engineering.

Intelligent Computing and Optimization for Sustainable Development

Edited by **Veena Grover** Noida Institute of Engineering & Technology, India, **Rajesh Kumar Dhanaraj** Galgotias Uni., **Balamurugan Balusamy** Shiv Nadar Uni., **Gopal Rathinam** University of Buraimi, Oman

This book presents insights into how Intelligent Computing and Optimization techniques can be used for attaining the goals of Sustainable Development. It provides a comprehensive overview of the latest breakthroughs and recent developments in sustainable, intelligent computing technologies, applications, and optimisation techniques across various industries, including Business Process Management, Manufacturing, Financial Sector, Agriculture, Financial Sector. Supply Chain Management and Healthcare etc. It focuses upon Computational Intelligent Techniques along with Optimization techniques to provide sustainable solutions to many problems.

Intelligent Systems and Industrial Internet of Things for Sustainable Development

Edited by **C. Kishor Kumar Reddy** Stanley Col of Engg and Tech for Women, India, **P. R Anisha** Stanley Col of Engg and Tech for Women, India, **Marlia Mohd Hanafiah** UKM, Malaysia, **Srinath Doss** Botho University, Botswana, **Kari Lippert**

Series: *Digital Technologies and Innovative Solutions for Sustainable Development*

The book studies emerging and sustaining technologies for applications of Industry 5.0 to develop technological solutions to address numerous real-life challenges to solve sustainable development-related issues. It identifies limitations, pitfalls, and open research questions in industry 5.0, discusses real-time problems, and challenges with equivalent solutions with a focus on sustainable growth to develop, humanization and environmentally friendly intelligent system applications. It analyses applications enabled by Industry 5.0 such as healthcare, supply chain, smart framing, remote sensing, production in manufacturing, and cloud manufacturing.

Intelligent Computing on IoT 2.0, Big Data Analytics, and Block Chain Technology

Edited by **Mohammad S. Obaidat**, **Padmalaya Nayak** Rangaraju Inst. of Eng. & Tech., **Niranjan K. Ray** Kalinga Inst. of Ind. Tech.

The book is designed as a reference text and explores the concepts and techniques of IoT, AI, and blockchain. It also discusses the possibility of applying blockchain for providing security in various domains. The specific highlight of this book is focused on the application of integrated technologies in enhancing data models, better insights and discovery, intelligent predictions, smarter finance, smart retail, global verification, transparent governance, and innovative audit systems.

Interaction of Symbols

User-Centered Icon Design

Paul Michael Zender

In Joyful Infographics, one of the leading graphic designers of recent times shows how a judicious use of humor can make infographics more understandable. Written in non-academic, easy to understand language, and with historical and contemporary visual examples presented throughout, this small book provides a short history of light-hearted graphics; it outlines eight clear ways to make graphics more understandable; it explores the importance of the audience; it shows you how to make information come alive during presentations through live-action 'performance' graphics; it discusses why joy and smiling are good for you; and it shows you how not to overdo it.

Internet of Things (IoT) and Wastewater Reuse

Ana Cristina Faria Ribeiro, **A. K. Haghi**

This work aims to present the practical application of an IoT model that can be used as the solution to the problems of water facilities. It presents IoT as one of the efficient tools for the control of a set of water and wastewater networks. Another novelty of this work is to investigate the utilization of remote sensing (RS) facilities equipped with networked sensors, advanced modems, data loggers, and the IoT in a case study. This volume is ideal for water industry personnel, academic staff, and master/research students in environmental engineering science.

Internet of Things-Based Machine Learning in Healthcare

Technology and Applications

Edited by **Prasenjit Dey, Sudip Kumar Adhikari, Sourav De, Indrajit Kar**

Internet of Medical Things (IoMT) is a system that collects data from patients with the help of different sensory inputs, e.g., accelerometer, electrocardiography, and electroencephalography. This text presents both theoretical and practical concepts related to the application of machine learning and Internet of Things algorithms in analyzing data generated through healthcare systems.

Introducing Autodesk Maya

Dariush Derakhshani

Introducing Autodesk Maya is your perfect hands-on guide to start animating quickly. Using approachable, real-world exercises, you'll master the fundamentals of this animation software by following full-color screen shots step by step. Each chapter opens with a quick discussion of concepts and learning objectives, and then launches into hands-on tutorials that give you firsthand experience and a good start on preparing for the 3ds Max certification exam. Whether you're a complete beginner or migrating from another 3D application, this task-based book provides the solid grounding you need in Autodesk 3ds Max.

Introduction to Game Programming using Processing

For Designers, Artists, Players, Non-Tech People and Everybody Else

Daniel Cermak-Sassenrath

This is an introductory textbook focusing on games (specifically interaction and graphics) as a pathway into programming. It empowers its readers to do basic programming, prototyping, creating games and other highly interactive applications, all from scratch and without any prior programming knowledge. This book is a great resource for students and aspiring professionals looking for an approachable entry into game programming.

Java Programming Exercises

Volume One: Language Fundamentals and Core Concepts

Christian Ullenboom

Take the first step in raising your coding skills to the next level, and test your Java knowledge on tricky programming tasks, with the help of the pirate Captain CiaoCiao. This is the first of two volumes which provide you with everything you need to excel in your Java journey, including tricks that you should know in detail as a professional, as well as intensive training for clean code and thoughtful design that carries even complex software.

Java Programming Exercises

Volume Two: Java Standard Library

Christian Ullenboom

In this volume, you will dive into the intricacies of Java Standard Libraries. You will continue to raise your coding skills, and test your Java knowledge on tricky programming tasks, with the help of the pirate Captain CiaoCiao. This is the second of two volumes which provide you with everything you need to excel in your Java journey, including tricks that you should know in detail as a professional, as well as intensive training for clean code and thoughtful design that carries even complex software.

Java Programming Exercises

Two-Volume Set

Christian Ullenboom

Raise your coding skills to the next level and test your Java knowledge on tricky programming tasks with the help of the pirate Captain CiaoCiao. This two-volume set provides you with everything you need, including tricks that you should know in detail as a professional, as well as intensive training for clean code and thoughtful design that carries even complex software. With numerous best practices, and extensively commented solutions to the tasks, these books provide the perfect workout for professional software development with Java.

Large Language Models

Concepts, Techniques and Applications

John Atkinson-Abutridy

For more than 60 years, research in this science has been focused on enabling machines to efficiently understand and generate human language. The secrets behind these technological advances lie in LLMs, whose power lies in their ability to capture complex patterns and learn contextual representations of language. How do these LLMs work? What are the available models and how are they evaluated? This book will help you answer these and many other questions. Designed to guide you step by step, with 6 chapters combining theory and practice, along with exercises in Python on the Colab platform, you will master the secrets of LLMs and their application in natural language processing.

2ND EDITION

Learning Video Game Design on the Tabletop

Ethan Ham

Learning to design tabletop games builds a solid foundation for game designers and provides methods that can be applied towards creating paper prototypes of computer-targeted games. Presented in a step-by-step format, this book helps the reader understand how the game design skills that are acquired through creating tabletop games can be used when designing video games. Fully playable games accompany every topic so you can truly understand and experience each component that goes into game creation.

Leveraging Computer Vision to Biometric Applications

Edited by **Arvind Selwal**, **Deepika Sharma** Central University of Jammu, India, **Mukesh Mann** IIIT Sonapat, India, **Sudeshna Chakraborty** Galgotias Uni, G.Noida, **Valentina E. Balas** Aurel Vlaicu University of Arad and Romanian Academy of Scientists, Romania, **Ouh Eng Lieh**

Series: Chapman & Hall/Distributed Computing and Intelligent Data Analytics

Computer vision is an effective solution in a diverse range of real-life applications. With the advent of the machine and deep learning paradigms, this book adopts machine and deep learning algorithms to leverage digital image processing for designing accurate biometrical applications. It presents the advancements made in the computer vision to biometric applications design approach using emerging technologies. It discusses the challenges of designing efficient and accurate biometric-based systems, which is a key issue that can be tackled via computer vision-based techniques. The book is for academicians, researchers working on computer vision and biometrics applications

Machine Learning and Python for Human Behavior, Emotion, and Health Status Analysis

Md Zia Uddin Sustainable Communication Technologies Department, SINTEF Digital, Oslo, Norway

The book strikes a harmonious balance between theoretical foundations and practical coding, and caters to a diverse audience, including smart home enthusiasts and researchers. It also prioritizes real-world applications, ensuring readers can immediately apply the knowledge gained to enhance smart home functionalities. The book covers Python basics, feature extraction, deep learning, and XAI, the book provides a comprehensive guide, offering an overall understanding of smart home applications.

Mathematical Foundations of Computer Science

Ashwin Lal Denison University, 100 W College Street, Granville, OH 43023, USA

Mathematical Foundations of Computer Science introduces students to the discrete mathematics needed later in their Computer Science coursework with theory of computation topics interleaved throughout. Students learn about mathematical concepts just in time to apply them to theory of computation ideas. For instance, sets motivate the study of finite automata, direct proof is practised using closure properties, induction is used to prove the language of an automaton, and contradiction is used to apply the pumping lemma.

Mathematics of Game Development

A Collection of Applied Lessons

Jacob Enfield George Mason University, Virginia Serious Game Institute, USA

This introductory textbook introduces students to mathematical concepts and helps them to understand how they apply to the field of game development. The book covers mathematical concepts commonly used in game development while providing application of the concepts in the industry-standard Unity game engine. This book will be ideal for any game development student looking to gain a grounding in the most relevant mathematical concepts to support their trade. It will also be useful as a stepping stone to digesting more advanced mathematical concepts for game development.

Measurements and Instrumentation for Machine Vision

Edited by **Oleg Sergiyenko** Autonomous Uni of Baja California, Mexico, **Wendy Flores-Fuentes** UABC, Mexico, **Julio Rodriguez-Quiñonez** UABC, Mexico, **Jesús E Miranda-Vega** Nat Tech Ins of Mexico

A comprehensive reference book that addresses the field of machine vision and its significance in cyber-physical systems. It explores the multidisciplinary nature of machine vision, involving electronic and mechatronic devices, artificial intelligence algorithms, embedded systems, control systems, robotics, interconnectivity, data science, and cloud computing. The book aims to provide advanced students, early career researchers, and established scholars with state-of-the-art knowledge and novel content related to the implementation of machine vision in engineering, scientific knowledge, and technological innovation.

Metaheuristics for Enterprise Data Intelligence

Edited by **Kaustubh Vaman Sakhare**, **Vibha Vyas**, **Apoorva S Shastri**

Series: Advances in Metaheuristics

With the emergence of the Data Economy, information has become integral to business excellence. Converting massive datasets into insightful information plays an important role in developing better business solutions. Optimization of such systems is crucial to leveraging the best outcomes and conclusions. To this end, AI-based nature inspired optimization methods or approximation-based optimization methods are becoming very powerful. This book provides a systematic discussion of AI-based Metaheuristics application in a wide range of areas.

Methodology to Improve Control Plane Security in SDN Environments

Wendwossen Desalegn , Javed Shaikh , Bayisa Taye

This book unveils a blueprint for safeguarding the very backbone of modern communication networks. It offers a roadmap towards fortifying SDN infrastructures against the relentless onslaught of cyber threats, ensuring resilience and reliability in an ever-evolving digital landscape. This reference elucidates an innovative approach devised to identify and mitigate the inherent risks associated with the OpenFlow protocol and its POX controller. Validated through rigorous simulations conducted within controlled environments utilizing the Mininet tool and SDN controller, the methodology unfolds, showcasing the intricate dance between theory and practice.

Multimodal Biometric Identification System

Case Study of Real Time Implementation

Sampada Dhole BVCOEW, India, **Vinayak Bairagi**

This book presents a novel method of multimodal biometric fusion using a random selection of biometrics, which covers a new method of feature extraction, a new framework of sensor level and feature level fusion. Most of the biometric systems presently use unimodal systems which have several limitations. Multimodal systems can increase the matching accuracy of a recognition system. This monograph shows how the problems of unimodal systems can be efficiently dealt with and focuses on multimodal biometric identification and sensor-level feature-level fusion. It discusses fusion in biometric systems to improve performance.

Nature Inspired Robotics

Jagjit Singh Dhatteerwal Koneru Lakshmaiah Education Foundation, **Kuldeep Singh Kaswan** Galgotias Univ, **Reenu Batra** SGT University, Gurugram, India

This book introduces the theories and methods of Nature-Inspired Robotics in artificial intelligence. Software and hardware technologies, alongside theories and methods, illustrate the application of bio-inspired artificial intelligence. It includes discussions on topics such as Robot Control Manipulators, Geometric Transformation, Robotic Drive Systems and Nature Inspired Robotic Neural System. Elaborating upon recent progress made in five distinct configurations of nature-inspired computing, it explores the potential applications of this technology in two specific areas: neuromorphic computing systems and neuromorphic perceptual systems.

Network Optimization in Intelligent Internet of Things Applications

Principles and Challenges

Edited by **Payal Khurana Batra , Pawan Singh Mehra , Sudeep Tanwar** Nirma University, Ahmednagar, India

This book sheds light on the optimisation methods that form the basis of effective communication between networked devices. It is an excellent resource as it provides readers with a thorough understanding of the methods, ideas, and tactics essential to attaining seamless connectivity and improving performance. This book provides a comprehensive understanding of the principles, challenges, and cutting-edge solutions in IoT network optimisation for all kinds of readers with different level of understanding.

On the Road to Resilience

Ensuring Secure IoV Networks

Sarah Ali Siddiqui CSIRO Early Research Career Fellow, Australia, **Adnan Mahmood** Macquarie University, Australia, **Quan Z. Sheng** Macquarie University, Australia, **Hajime Suzuki** Principal Research Scientist at CSIRO, Australia, **Wei Ni** Principal Scientist at CSIRO, Australia

This book explores trust management within the Internet of Vehicles (IOV) networks, a paradigm crucial for safety-critical applications and a resource for non-safety applications and efficient traffic flows. However, the existence of malicious entities and the potential spread of harmful information within the network impairs its performance and resents a danger to both passengers and pedestrians. This book tackles the challenges regarding the quantification of trust attributes and misbehavior detection threshold definition within the dynamic and distributed IoV environment. An essential guide for industry professionals and scholars in automotive systems and cybersecurity.

Open Data for Everybody

Using Open Data for Social Good

Nathan Coyle

This book argues a simple point: if open data and the digital aspects that support it aren't accessible to all, then what is the point of it? Deeply rooted in grassroots social activism, this book explores a journey that led to collaboration with governments globally, based on real hands-on work, aiming to democratize open data. Through narrative storytelling, we share insights, best practices, procedures, and community-driven approaches. Regardless of your skill set or organization size, from grassroots workers to third-sector professionals and government officers, join us to reshape the perception of open data, fostering change in neighborhoods.

2ND EDITION

Programming Language Explorations

Ray Toal, Sage Angelica Strieker, Marco Berardini

Programming Language Explorations helps its readers gain proficiency in programming language practice and theory by presenting both example-focused, chapter-length explorations of fourteen important programming languages and detailed discussions of the major concepts transcending multiple languages. A language-by-language approach is sandwiched between an introductory chapter that motivates and lays out the major concepts of the field and a final chapter that brings together all that was learned in the middle chapters into a coherent and organized view of the field.

Python Programming

A Step-by-Step Guide to Learning the Language

C. K. Dhaliwal, Poonam Rana, T. P. S. Brar

This book explores Python's rich history, dynamic features, and its wide-ranging applications in web development, data science, and machine learning. From its installation process to interactive help, readers embark on a journey through Python's unique characteristics and its distinctions from other programming languages. It lays a solid foundation for beginners and seasoned programmers alike. Print edition not for sale in South Asia (India, Sri Lanka, Nepal, Bangladesh, Pakistan or Bhutan)

Quantum Machine Learning

A Modern Approach

Edited by **S Karthikeyan** KPR Institute of Engineering and Technology, India, **M Akila** KPR Institute of Engineering and Technology, India, **D. Sumathi**, **T Poongodi**

This text presents the research into and application of machine learning in quantum computation, known as quantum machine learning (QML). It presents a comparison of quantum machine learning, classical machine learning, and traditional programming, along with the usage of quantum computing, towards improving traditional machine learning algorithms through case-studies.

Recent Advances in Computational Intelligence and Cyber Security

The International Conference on Computational Intelligence and Cyber Security

Edited by **Ashok Kumar Singh**, **Zeeshan Ali Siddiqui**, **Siddharth Singh**, **Amit Kumar Singh**, **Tanveer J. Siddiqui**

In the ever-accelerating tapestry of our digital age, the symbiotic relationship between computational intelligence and cyber security has become the linchpin of progress. The relentless pace of technological evolution and the ceaseless emergence of cyber threats demand not only adaptation but also an exploration of the forefronts of innovation and defence.

Resource Discovery, Navigability and Trust Management Techniques for IoT and SIoT

Venugopal K R, **Roopa M S**, **Santosh Pattar**

A ready reference for the next-generation discovery techniques, this book presents advanced research findings on resource discovery, network navigability, and trust management on the Internet of Things (IoT) and Social Internet of Things (SIoT) ecosystems. It discusses the benefits of integrating social networking concepts into the Internet of Things to find the preferable, reliable, scalable, and near-optimal detection of things or services. It explores the concepts of the Social Internet of Things in different domains of IoT, such as the Internet of Vehicles and the Industrial Internet of Things.

Responsible Use of AI in Military Systems

Edited by **Jan Maarten Schraagen**

Series: *Chapman & Hall/CRC Artificial Intelligence and Robotics Series*

Responsible Use of AI in Military Systems lays out the land for what is required to develop and use AI in military systems in a responsible manner. Current developments in the emerging field of Responsible AI, as applied to military systems in general (not merely weapons systems) are discussed. The book takes a broad and transdisciplinary scope, by including contributions from the fields of philosophy, law, human factors, AI, systems engineering, and policy development.

Revolutionizing Communication

The Role of Artificial Intelligence

Edited by **Raquel V. Benítez Rojas**, **Francisco Julián Martínez-Cano**

"In 'Revolutionizing Communication: The Role of Artificial Intelligence,' we delve into the powerful impact of AI on how we communicate. This book explores AI's influence on business, education, healthcare, and personal interactions, offering valuable insights for professionals and curious minds alike. The primary audience for the book encompasses a diverse range of individuals and professionals who are interested in understanding the impact of artificial intelligence on communication.

RNA: Computational Methods for Structure, Kinetics, and Rational Design: Volume One

Peter G. Clote Boston College, MA, USA

Series: *Chapman & Hall/CRC Computational Biology Series*

RNA Structure, Kinetics, and Rational Design is a comprehensive treatment of computational methods concerning the secondary structure, folding kinetics and rational design of RNA. It discusses basic principles of statistical thermodynamics, optical melting experiments for energy parameter estimation, as well as dynamic programming, Monte Carlo and constraint programming methods, Markov state models (MSMs), and the requisite mathematics. Each chapter includes problems and complete solutions (sometimes including computer programs using Python and extensions Numpy and Scipy). This book provides the nuts, bolts and tools to take the next steps in computational RNA synthetic biology.

Robotics

From Theory to Practice

Chao Chen Monash University, **Wesley Au** Department of Mechanical and Aerospace Engineering, Monash University

This book bridges the gap between robotic theory and practical applications in the modelling, planning and control of modern industrial robots. This book is a valuable resource for university students at all levels, as well as professionals who are interested in robotics and have a limited background in engineering or mathematics.

Robust Control Algorithms for Two-link Flexible Manipulators

Kshetrimayum Lochan IIT Palakkad, India, **Binoy Krishna Roy** NIT Silchar, India, **Bidyadhar Subudhi** IIT Goa, India, **Santhakumar Mohan**

Various modelling and control of two-link flexible manipulators are presented in this book. The lumped parameter modelling method and the assumed modes method modelling are comprehensively reviewed. The book also reviews the trajectory tracking problem and tip trajectory tracking problem along with the suppression of tip deflection of the links. An exponential time varying signal and a chaotic signal are considered as the desired trajectories. The identical/ non-identical slave manipulator is synchronised with the controlled master manipulator so that the slave manipulator indirectly follows the desired manipulator.

Shader Writing in Open Shading Language

with RenderMan® Examples

Mitch Prater

Shaders make renderings look the way they look. They represent the intersection between the artistry and technology of rendering. The ability to program shaders is a foundational skill in the computer graphics field and its applications; however that skill is largely, if not entirely, self-taught. OSL Shaders for RenderMan is a treatise on shader writing and development that hopes to remedy the current lack of material on this important area of RenderMan expertise. It covers the entire range of independent variables upon which all shaded pattern generation is based.

Simulation-based Labs for Circuit Analysis

Discovering Circuits with Multisim Live and Tinkercad

Massimo Mitolo

Series: *River Publishers Series in Electronic Materials, Circuits and Devices*

Aspiring engineers and technicians, circuit enthusiasts, and educators will find "Simulation-based Labs for Circuit Analysis" an indispensable resource for unlocking the boundless possibilities of circuit analysis in the digital age. Whether you are a student seeking to excel in your studies or a professional looking to refine your engineering skills, this book will empower you to innovate, explore, and experiment without limits.

Small-scale Computational Vibration of Carbon Nanotubes: Composite Structure

Muzamal Hussain

Series: *River Publishers Series in Mathematical, Statistical and Computational Modelling for Engineering*

This book presents orthotropic vibration modeling and analysis of carbon nanotubes (CNTs) which be helpful in applications such as oscillators and in non-destructive testing, and also vibrations characteristics of armchair double-walled CNT by means of nonlocal elasticity shell model. The nonlocal shell model is established by inferring the nonlocal elasticity equations in to Kelvin's theory, which is our particular motivation. The suggested method to investigate the solution of fundamental Eigen relations is wave propagation, which is a well-known and efficient technique to develop the fundamental frequency equations.

Smart Medical Imaging for Diagnosis and Treatment Planning

Edited by **Nilanjan Dey** JIS Univ, Kolkata, India, **Bitan Misra**, **Sayan Chakraborty**

This book presents advanced research on smart health technologies, focusing upon the innovative transformations in diagnosis and treatment planning using medical imaging and data analysed by data science techniques. It shows how smart health technologies leverage artificial intelligence (AI) and big data analytics to provide more accurate and efficient diagnosis and treatment planning. In search for innovative and novel methods and techniques for health technologies and medical data processing, the book discusses applications of Artificial Intelligence, Data Science, Machine Learning, Deep Learning, the Internet of Things, Big Data, Cloud Computing.

Soft Power for the Journey

The Life of a STEM Trailblazer

Sandra K. Johnson

This is a story of an African American woman working at the highest levels in STEM. Dr. Sandra K. Johnson earned a Ph.D. in electrical and computer engineering from Rice University in May 1988, the first black woman to do so. The story narrates the inextricable human dimension of dealing with various personal and familial challenges that people naturally encounter—with the highs and lows, and exhilarations and disappointments. It is a heartwarming, compelling story designed to encourage, be aspirational and awe-inspiring, and uplift the spirits of a broad and diverse readership.

Storytelling for Spatial Computing and Mixed Reality

The Art of Augmenting Imagination

Rob Morgan

This is a clear, accessible manual of storytelling techniques and learning activities for spatial computing and mixed reality. It covers the key skills that the next generation of digital storytellers will need, providing readers with practical tools for creating digital stories and adventures out in the real world. This book will be invaluable to students of game design, experience design and interactive narrative. It provides theories, best-practices and case-studies also relevant to creative professionals in games, XR, immersive theatre, theme parks and brand experience.

Symbolic Regression

Edited by **Gabriel Kronberger**, **Bogdan Burlacu**, **Michael Kommenda**, **Stephan M. Winkler**, **Michael Affenzeller**

Symbolic regression (SR) is one of the most powerful machine learning techniques that produces transparent models, searching the space of mathematical expressions for a model that represents the relationship between the predictors and the dependent variable without the need of taking assumptions about the model structure. Currently, the most prevalent learning algorithms for SR are based on genetic programming (GP), an evolutionary algorithm inspired from the well-known principles of natural selection. This book is an in-depth guide to GP for SR, discussing its advanced techniques as well as examples of applications in science and engineering.

Technological Advancement in Internet of Medical Things and Blockchain for Personalized Healthcare

Applications and Use Cases

Edited by **A Prasanth** Vel Tech Rangarajan Dr. Sagunthala R&D Institute of Science and Technology, India, **Lakshmi D**, **Rajesh Kumar Dhanaraj** Galgotias Uni., **Balamurugan Balusamy** Shiv Nadar Uni., **Sherimon P C**

Primarily written for graduate students and academic researchers working in computer science, engineering, biomedical and electrical engineering, this text presents advanced enabling technologies of the internet of medical things in personalized healthcare. It discusses topics such as a smart contract-based trust management framework for enhancing security in the internet of medical things environment, and an access control mechanism for blockchain-enabled internet of medical things. It also includes case studies on connecting patient-centric blockchains with multilayer networks and crypto hash-based malware detection in the internet of medical things framework.

Tabletop Game Accessibility

Meeple Centred Design

Michael James Heron Chalmers University of Technology / University of Gothenburg, Sweden

This foundational resource on the topic of tabletop game accessibility provides actionable guidelines on how to make games accessible for people with disabilities. The book contextualizes this practical guidance within a philosophical framework of how the relatively abled can ethically address accessibility issues within game design. This book will be of great interest to all professional tabletop and boardgame designers, as well as digital game designers and designers of other physical products.

Technology is Dead

The Path to a More Human Future

Chris Colbert

Technology is Dead is a book of both challenge and hope, written for those who are able or willing to lead us out of our global predicament. It is for the politicians, CEOs, community leaders, everyday parents and young people who understand that we must change our ways to ensure a sustainable future for all living things and the planet we rely on. The book's premise is that technology (like capitalism) has been an unprecedented force for prosperity, while at the same time bringing unrelenting, and unplanned downsides.

The Cores of Game Design

Mechanics, Economics, Narrative, and Aesthetics

Yvens R. Serpa

This book considers the four essential cores of game design: Mechanics, the interactive elements that allow players to be part and interact with the game itself; Economy, the resources and numerical concepts that will enable players to evaluate and consider the options in the game, creating strategy, risk, and fun; Narrative, the textual features that enable players to create and generate meaning for the game and its parts; and the Aesthetics, the audiovisual elements that allow players to experience the game through their senses and feelings. This book will be of great interest to students, indie game developers, and aspiring early-career designers.

The Future of Human-Computer Integration

Industry 5.0 Technology, Tools, and Algorithms

Edited by **Norliza Katuk** School of Computing Universiti Utara, Malaysia, **Roberto Vergallo** University of Salento, Italy, **Tito Sugiharto** Universitas Kuningan, Indonesia

The book, *The Future of Human-Computer Integration: Industry 5.0 Technology, Tools and Algorithms*, provides a valuable insight into how Industry 5.0 technologies, tools, and algorithms can revolutionise industries and drive innovation. The book has been written for technology professionals and practitioners, especially ones in the healthcare, smart systems and the oil and gas sector sectors. It would serve as a useful reference for students studying in such advanced courses as digital technology, digital transformation, emergent technologies, innovation through new technologies.

The Golden Age of Data Visualization

How Did We Get Here?

Kimbal Marriott Monash University, Australia

This book explains how and why this has happened. It details the evolution of information graphics, the kinds of graphics at the core of data visualization—maps, diagrams, charts, scientific and medical images—from prehistory to the present day. This book is written for data visualization researchers and professionals, and anyone interested in data visualization and the way we use graphics to understand and think about the world.

The Metaverse

A Critical Introduction

David Burden, Maggi Savin-Baden University of Worcester

The Metaverse: A Critical Introduction provides a clear, concise and well-grounded introduction to the concept of the Metaverse, its history, the technology, the opportunities, the challenges and how it is having an impact almost every facet of society. The book serves as a standalone introduction to the Metaverse, and as an introduction to the range of topics that will be covered by the specialist volumes in *The Metaverse Series*. This book is a primer and Metaverse reader, drawing on academic research, practical and commercial experiences and taking inspiration from the science fiction origins and treatments of the Metaverse.

The Metaverse for Learning and Education

Maggi Savin-Baden University of Worcester, **David Burden**

Accompanying *The Metaverse: A Critical Introduction* in CRC Press' new *The Metaverse Series*, this book explores the ways in which the Metaverse can be used for education and learning, as well as how it is different from VR application development. For example, institutions and tutors can make use of the Metaverse space to represent themselves in it or create their own content and share experiences, while students can access a wider range of material, learn within appropriate settings and create content to support their own and others' learning.

The Pocket Mentor for Animators

Hollie Newsham

Series: The Pocket Mentors for Games Careers

Want to work as an Animator in the video games industry? Then this is the book for you; a friendly guide to understanding the industry that offers practical advice and guidance to prepare you for the challenge! It covers every step of the way from picking universities through to your first year on the job. It outlines job application processes and includes animator-specific tips as well! Drawing from personal experience, along with interviews from 10 incredibly talented people within the industry, this book ensures you feel supported and ready to enter the industry. A beginner's guide to life as an Animator, this book is an invaluable resource for aspiring and seasoned pros alike.

The WebGPU Sourcebook

High-Performance Graphics and Machine Learning in the Browser

Matthew Scarpino

The WebGPU Sourcebook: High-Performance Graphis and Machine Learning in the Browser explains how to code web applications that use WebGPU to access the client's graphics processing unit (GPU). This makes it possible to render graphics at high-speed in a browser and perform computationally-intensive tasks such as machine learning. The first part introduces WebGPU at a high level, without graphical rendering or computation. The chapters in the second part are focused on graphical rendering. The third part of the book focuses on compute shaders.

Towards Human-Level Artificial Intelligence

How Neuroscience Can Inform the Pursuit of Artificial General Intelligence or General AI

Eitan Michael Azoff

This book has a dual purpose. First, it provides a multi-disciplinary research survey across all branches of neuroscience and AI research that relate to the book's mission of bringing AI research closer to building a human-level AI (HLAI) system. It provides an encapsulation of key ideas and concepts, generally without going into tutorial explanations, but providing all the references for the reader to delve deeper, and including coverage of pioneering research which is not yet available in textbooks. Second, the final part of the book brings together key concepts from the survey and makes suggestions for building HLAI.

Transcending Imagination

Artificial Intelligence and the Future of Creativity

Alexander Manu

Series: *Chapman & Hall/CRC Artificial Intelligence and Robotics Series*

Transcending Imagination is a vision into a new world of artifacts of beauty whose intention is articulated by a human and is manifested by a neural network. The book examines the potential for AI to both enhance and transform the creative process, exploring the impact it will have on the arts, design, entertainment, and in the education of artists and designers.

Zhang Time Discretization (ZTD) Formulas and Applications

Yunong Zhang , Jinjin Guo

The book aims to solve the discrete implementation problems of continuous-time neural network models while improving the performance of neural networks by using various Zhang Time Discretization (ZTD) formulas. It summarizes and presents the systematic derivations and complete researches of ZTD formulas from special 3S-ZTD formulas to general NS-ZTD formulas, which finally leads to the proposed discrete-time Zhang neural network (DTZNN) algorithms. It will benefit engineers, senior undergraduates, graduate students, and researchers of neural networks, computer mathematics, computer science, artificial intelligence, numerical algorithms, optimization, robotics, and simulation modeling.

A Bridge to Higher Mathematics

James R. Kirkwood Sweet Briar College, Sweet Briar, VA 24595, **Raina S. Robeva** Randolph-Macon College, Ashland, VA USA

Series: Textbooks in Mathematics

The goal of this unique text is to provide an "experience" that would facilitate a better transition for mathematics majors to the advanced proof-based courses required for their major. If you "love mathematics, but I hate proofs" this book is for you. Example-based courses such as introductory Calculus transition somewhat abruptly, and without a warning label, to proof-based courses, and may leave students with the unpleasant feeling that a subject they loved has turned into material they find hard to understand.

A Simple Introduction to Python

Stephen Lynch

Series: Chapman & Hall/CRC The Python Series

A Simple Introduction to Python is aimed at pre-university students and complete novices to programming. The whole book has been created using Jupyter notebooks. After introducing Python as a powerful calculator, simple programming constructs are covered and the NumPy, Matplotlib and SymPy modules (libraries) are introduced. Python is then used for Mathematics, Cryptography, Artificial Intelligence, Data Science and Object Oriented Programming. The reader is shown how to program using the integrated development environments: Python IDLE, Spyder, Jupyter notebooks, and through cloud computing with Google Colab.

2ND EDITION

Advanced Linear Algebra

Nicholas A. Loehr Virginia Technical University, Blacksburg, USA

Series: Textbooks in Mathematics

Designed for advanced undergraduate and beginning graduate students in linear or abstract algebra, Advanced Linear Algebra covers theoretical aspects of the subject, examples, computations, and proofs. It explores a variety of advanced topics in linear algebra that highlight the rich interconnections of the subject to geometry, algebra, analysis, combinatorics, numerical computation, and many other areas of mathematics. A wide array of topics is included, ranging from concrete matrix theory (basic matrix computations, determinants, normal matrices, canonical forms, matrix factorizations, and numerical algorithms) to more abstract linear algebra.

3RD EDITION

An Introduction to Partial Differential Equations with MATLAB

Matthew P. Coleman Fairfield University, USA, **Vladislav Bukshytnov**

Series: Advances in Applied Mathematics

Suitable for a 1- or 2-semester intro to PDEs and Fourier series, the book offers equations based on method of solution and provides both physical and mathematical motivation. This 3rd edition changes the book structure by lifting the role of the computational part much closer to the revised analytical portion. Included is a substantial amount of material on reviewing computational methods for solving ODEs (symbolically and numerically), visualizing solutions of PDEs, using MATLAB's symbolic programming toolbox, and applying various numerical schemes for computing with regard to numerical solutions in practical applications, along with suggestions for topics of course projects.

3RD EDITION

Applied Combinatorics

Fred Roberts Rutgers University, Piscataway, New Jersey, USA, **Barry Tesman** Dickinson College, Carlisle, Pennsylvania, USA

Series: Discrete Mathematics and Its Applications

The third edition of this popular text presents the tools of combinatorics for a first undergraduate course. After introducing fundamental counting rules, tools of graph theory and relations, the focus is on three basic problems of combinatorics: counting, existence, and optimization problems. They discuss advanced tools for dealing with the counting problem, including generating functions, recurrences, inclusion/exclusion, and Pólya theory. Combinatorial design, coding theory, and special problems in graph theory are also covered.

Applied Mathematics

A Computational Approach

João Luís de Miranda

This book aims to provide a basic and self-contained introduction to Applied Mathematics within a computational environment. The book is aimed at practitioners and researchers interested in modelling real world applications and verifying the results — guiding readers from the mathematical principles involved through to the completion of the practical, computational task.

2ND EDITION

Artificial Intelligence

An Introduction to the Big Ideas and their Development

Robert H. Chen, **Chelsea Chen**

Series: Chapman & Hall/CRC Mathematics and Artificial Intelligence Series

This book guides readers through the history and development of AI, from its early mathematical beginnings through to the exciting possibilities of its potential future applications. To make this journey as accessible as possible, the authors build their narrative around accounts of some of the more popular and well-known demonstrations of artificial intelligence, including Deep Blue, AlphaGo and even Texas Hold'em, followed by their historical background, so that AI can be seen as a natural development of the mathematics and computer science of AI.

Boundary Value Problems for Linear Partial Differential Equations

Manuel Mañas Complutense University of Madrid, Spain, **Luis Martínez Alonso**

This book provides students with the opportunity to understand and exercise the benefits of Boundary value problems and initial value problems, equipping them with realistic, practical tools to study solvable linear models of electromagnetism, fluid dynamics, geophysics, optics, thermodynamics and specifically, quantum mechanics. Emphasis is devoted to motivating the use of these methods by means of concrete examples taken from physical models.

Classical Clifford Algebras

Operator-Algebraic and Free-Probabilistic Approaches

Ilwoo Cho Saint Ambrose University, Iowa

Series: *Chapman & Hall/CRC Monographs and Research Notes in Mathematics*

Classical Clifford Algebras: Operator-Algebraic and Free-Probabilistic Approaches offers novel insights through operator-algebraic and free-probabilistic models. By employing these innovative methods, the author sheds new light on the intrinsic connections between Clifford algebras and various mathematical domains. This monograph should be an essential addition to the library of any researchers interested in Clifford Algebras or Algebraic Geometry more widely.

2ND EDITION

Computational Methods in Finance

Ali Hirsra Columbia University, New York, USA

Series: *Chapman and Hall/CRC Financial Mathematics Series*

Computational Methods in Finance is a book developed from the author's courses at Columbia University and the Courant Institute of New York University. This self-contained text is designed for graduate students in financial engineering and mathematical finance, as well as practitioners in the financial industry. It will help readers accurately price a vast array of derivatives. This new edition has been thoroughly revised throughout to bring it up to date with recent developments. It features numerous new exercises and examples, as well as two entirely new chapters on machine learning.

Decision Analysis through Modeling and Game Theory

William P. Fox

Series: *Advances in Applied Mathematics*

This unique book presents decision analysis in the context of mathematical modeling and game theory. The author emphasizes and focuses on the model formulation and modeling building skills required for decision analysis, as well as the technology to support the analysis. The primary objective of this book is illustrative in nature. It sets the tone through the introduction to mathematical modeling. The text provides a process for formally thinking about the problem and illustrates many scenarios and illustrative examples.

Derivatives Unlocked

A Practitioner's Perspective

Philippe Dufournier

This book offers the reader a practical explanation of the key concepts underpinning financial derivatives. Resolutely selective and user-friendly, this book constitutes an introduction to the basic pricing, design and use cases of derivatives products in modern global finance. The book is articulated around two parallel streams of content. On the one hand, the Derivatives Toolbox comes as a set of calculation and pricing rules behind the building blocks of most derivatives products. On the other hand, the Case Studies, largely inspired by real European corporate finance and risk management situations, allow the reader to make explicit use of the design and pricing principles learned.

Dynamic Equations on Time Scales and Applications

Edited by **Ravi P. Agarwal**, **Bipan Hazarika**, **Sanket Tikare**

This book presents the theory of dynamic equations on time scales and applications, providing an overview of recent developments in the foundations of the field as well as its applications. It discusses the recent results related to the qualitative properties of solutions like existence and uniqueness, stability, continuous dependence, controllability, oscillations, etc. • Presents cutting-edge research trends of dynamic equations and recent advances in contemporary research on the topic of time scales • Connects several new areas of dynamic equations on time scales with applications in different fields

Ellipses Inscribed in, and Circumscribed about, Quadrilaterals

Alan Horwitz

The main focus is disseminating research results regarding the pencil of ellipses inscribing arbitrary convex quadrilaterals. In particular, the author proves that there is a unique ellipse of maximal area, EA, and a unique ellipse of minimal eccentricity, EI, inscribed in Q. Similar results are also proven for ellipses passing through the vertices of a convex quadrilateral along with some comparisons with inscribed ellipses. Special results are also given for parallelograms.

3RD EDITION

Encounters with Chaos and Fractals

Denny Gulick, Jeff Ford Gustavus Adolphus Collete

Series: *Textbooks in Mathematics*

Encounters with Chaos and Fractals, Third Edition provides an accessible introduction to chaotic dynamics and fractal geometry. It incorporates important mathematical concepts and backs up the definitions and results with motivation, examples, and applications. The Third Edition updates this classic book for a modern audience. New applications on contemporary topics, like data science and mathematical modelling, appear throughout. Coding activities are transitioned to open-source programming languages, including Python.

Essential Mathematics for Economics

Alexis Akira Toda

Essential Mathematics for Economics covers mathematical topics that are essential for economic analysis in a concise but rigorous fashion. The book covers selected topics such as linear algebra, real analysis, convex analysis, constrained optimization, dynamic programming, and numerical analysis in a single volume. The book is entirely self-contained, and almost all propositions are proved.

Exploring Operations Research with R

Jim Duggan

Series: *Chapman & Hall/CRC Series in Operations Research*

This book shows how the R Programming language can be a valuable tool – and way of thinking – that can be successfully applied to the field of operations research (OR). The core aim of the book is to provide a self-contained introduction to R (both Base R and the tidyverse) and show how this knowledge can be applied to a range of OR challenges in the domains of public health, infectious diseases, and energy generation, and so provide a platform to develop actionable insights to support decision making.

Fractional Calculus for Skeptics I

The Fractal Paradigm

Bruce J. West North Carolina State University, USA;
Center for Nonlinear Science, UNT, Denton, TX, USA,
YangQuan Chen University of California Merced, USA

Series: *Fractional Order Thinking in Exploring the Frontiers of STEM*

This book is the first of its kind on fractional calculus (FC), dedicated to advocating for FC in STEM education and research. The book will appeal to students and researchers in all STEM-related fields, engineering, physics, biology and biomedicine, climate change, big data, machine learning, etc. It is also suitable for general readers interested in these fields.

2ND EDITION

Fractional Integrals, Potentials, and Radon Transforms

Boris Rubin Louisiana State University, United States of America

Series: *Chapman & Hall/CRC Monographs and Research Notes in Mathematics*

This book presents recent developments in the fractional calculus of functions of one and several real variables, and shows the relation of this field to a variety of areas in pure and applied mathematics. In this thoroughly revised new edition, the book aims to explore how fractional integrals occur in the study of diverse Radon type transforms in integral geometry. Beyond some basic properties of fractional integrals in one and many dimensions, this book also contains a mathematical theory of certain important weakly singular integral equations of the first kind arising in mechanics, diffraction theory and other areas of mathematical physics.

Fundamentals of Abstract Algebra

Mark J. DeBonis Manhattan College, USA

Series: Textbooks in Mathematics

This is a primary textbook for a one year first course in Abstract Algebra, but it has much more to offer besides this. The book is full of opportunities for further, deeper reading, including explorations of interesting applications and more advanced topics, such as Galois theory. Replete with exercises and examples, the book is geared towards careful pedagogy and accessibility, and requires only minimal prerequisites. The book includes a primer on some basic mathematical concepts that will be useful for readers to understand, and in this sense the book is self-contained.

General Quantum Numerical Analysis

Svetlin G. Georgiev, Khaled Zennir Qassim University

Series: Advances in Applied Mathematics

This book is focused on the qualitative theory of general quantum calculus, the modern name for the investigation of calculus without limits. It centers on designing, analysing and applying computational techniques for general quantum differential equations. The quantum calculus or q-calculus began with FH Jackson in the early twentieth century, but this kind of calculus had already been worked out by Euler and Jacobi. Recently it arose interest due to high demand of mathematics that models quantum computing and in the connection between mathematics and physics.

Geometry and Topology in Music

Edited by Moreno Andreatta, Emmanuel Amiot, Jason Yust

This book introduces path-breaking applications of concepts from mathematical topology to music-theory topics including harmony, chord progressions, rhythm, and music classification. Contributions address topics of voice leading, Tonnetze (maps of notes and chords), and automatic music classification. It further introduces an application of topology to automatic music classification, drawing upon both static topological representations and time-series evolution, showing how static and dynamic features of music interact as features of musical style. It was originally published as a special issue of the Journal of Mathematics and Music.

Graph Theory and Decomposition

Jomon Kottarathil Savio H.S.S. Devagiri, **Sudev Naduvath** Christ Deemed to be University, **Joseph Varghese Kureethara** Christ Deemed to be University

The book Graph Theory and Decomposition covers major areas of the decomposition of graphs. It is a three-part reference book with nine chapters that is aimed at enthusiasts as well as research scholars. It comprehends historical evolution and basic terminologies. It deliberates on decompositions into cyclic graphs, such as cycle, digraph, and K4-e decompositions.

Handbook of Exact Solutions to Mathematical Equations

Andrei D. Polyanin

Series: Advances in Applied Mathematics

This Handbook is a unique reference for scientists and engineers, containing over 3,800 nonlinear partial differential equations with solutions. The book concerns first-, second-, third-, fourth-, and higher-order nonlinear PDEs and systems of coupled PDEs. It discusses parabolic, hyperbolic, and elliptic equations as well as those of mixed and general type. Apart from the exact solutions, it also provides various reductions and transformations leading to ordinary differential equations, linear PDEs, or simpler PDEs.

2ND EDITION

Handbook of Military and Defense Operations Research

Edited by **Natalie M. Scala** Towson University, USA, **James P. Howard, II** Johns Hopkins Applied Physics Laboratory, USA

Series: *Chapman & Hall/CRC Series in Operations Research*

Tracing its roots back to World War II, Operations Research (OR) has become a vital tool in military and defense strategy. The second edition of this book highlights this evolution, showcasing how OR integrates with cutting-edge areas like artificial intelligence, cybersecurity, and big data analytics. This edition is more than a historical account; it is a practical guide. The volume features expert voices and offers insights into OR applications in modern security challenges. Dive into this handbook to explore the rich, dynamic field of military and defense operations research, a discipline at the heart of global security and strategic decision-making.

2ND EDITION

Introducing Game Theory and its Applications

Elliott Mendelson , Daniel Zwillingler

Series: *Advances in Applied Mathematics*

Introducing Game Theory and its Applications presents an easy-to-read introduction to the basic ideas and techniques of game theory. After a brief introduction, the authors begin with a chapter devoted to combinatorial games—a topic neglected or treated minimally in most other texts. The focus then shifts to two-person zero-sum games and their solution.

Introduction to Combinatorial Methods in Geometry

Alexander Kharazishvili

This book offers an introduction to some combinatorial (also, set-theoretical) approaches and methods in geometry of the Euclidean space R^n . The topics discussed in the manuscript are due to the field of combinatorial and convex geometry. The material presented is based on the lecture course given by the author. The choice of material serves to demonstrate the unity of mathematics and variety of unexpected interrelations between distinct mathematical branches.

Intuitive Axiomatic Set Theory

José L. García

Series: *Textbooks in Mathematics*

Set theory can be rigorously and profitably studied through an intuitive approach, thus independently of formal logic. Nearly every branch of Mathematics depends upon set theory and thus knowledge of set theory is of interest to every mathematician. This book is addressed to all mathematicians and tries to convince them that this intuitive approach to axiomatic set theory is not only possible, but also valuable.

Lattice Path Combinatorics and Special Counting Sequences

From an Enumerative Perspective

Chunwei Song

This book endeavors to deepen our understanding of lattice path combinatorics, to explore key types of special sequences, to elucidate their interrelations, and at the same time to advocate the author's interpretation of the "combinatorial spirit". It intends to give an up-to-date introduction to the theory of lattice path combinatorics, its relation to those special counting sequences that are important in modern combinatorial studies, such as the Catalan, Schröder, Motzkin, Delannoy numbers, and their generalized versions. The book will attract to graduate students and advanced undergraduates studying combinatorics, discrete mathematics, or computer science.

Linear Algebra for Earth Scientists

J. Douglas Walker, Noah M. McLean

This book is written for undergraduate and graduate students in Earth and Environmental sciences. It is intended to give students enough background in linear algebra to work with systems of equations and data in geology, hydrology, geophysics, or whatever part of the Earth Sciences they engage with. The book does not presuppose any extensive prior knowledge of linear algebra. Instead, the book builds students up from a low base to a working understanding of the subject that they can apply to their work, using many familiar examples in the geosciences.

Mathematical Biology

Discrete and Differential Equations

Christina Alvey, Daniel Alvey

Series: *Textbooks in Mathematics*

This text serves as an exploration of the beautiful topic of mathematical biology through the lens of discrete and differential equations. Intended for students who have completed differential and integral calculus, this book allows students to explore topics such as bifurcation diagrams, nullclines, discrete dynamics, and SIR models for disease spread, which are often reserved for more advanced undergraduate or graduate courses. These exciting topics are sprinkled throughout the text alongside the more typical first and second order linear differential equations and systems of linear differential equations.

2ND EDITION

Mathematical Puzzles

Revised Edition

Peter Winkler Dartmouth College, USA

Series: *AK Peters/CRC Recreational Mathematics Series*

Research in maths is much more than solving puzzles, but most people will agree that solving puzzles is not just fun: it helps focus the mind and increases one's armory of techniques for doing maths. This book makes this connection explicit by isolating important mathematical methods, then using them to solve puzzles and prove a theorem. This Revised Edition has been thoroughly edited to correct errors and provide clarifications, and includes some totally different solutions, modified puzzles, and one entirely new puzzle.

Mathematical Sciences and Applications

Proceedings of the International Conference on Mathematical Sciences and Applications (ICMSA 2023)

Edited by **Sanjay Chaudhary, Sanjeev Kumar, Shyamli Gupta**

The papers appearing in these proceedings are part of talks, oral presentations and poster presentations given at the International Conference on Mathematical Sciences and Applications held in the Department of Mathematics, Dr. Bhimrao Ambedkar University, Agra (India) from March 24-26, 2023. The Conference was held under the auspices of the Mathematics Department which is recognized and founded by the U.P. State Govt. as a Centre of Excellence in Mathematics.

Mathematics of Musical Rhythm

In Memoriam Godfried Toussaint

Edited by **Jason Yust , Christopher White , Leigh VanHandel** Michigan State University, USA

This book presents original research applying mathematics to musical rhythm, with a focus on computational methods, theoretical approaches, analysis of rhythm in folk and global music traditions, syncopation, and maximal evenness. It honours the legacy of computer scientist and music theorist Godfried Toussaint. The volume also includes an original composition by Tom Johnson and a personal recollection of Toussaint by Francisco Gómez-Martín. It was originally published as a special issue of the Journal of Mathematics and Music.

Mathematics of Tabletop Games

Aaron Montgomery

Series: *AK Peters/CRC Recreational Mathematics Series*

This book provides a bridge between mathematics and hobby tabletop gaming. Instead of focusing on games mathematicians play, such as nim and chomp, this book starts with the tabletop games played by avid gamers and hopes to address the question: which field of mathematics concerns itself with this situation? Readers interested in either mathematics or tabletop games will find this book an engaging way to begin exploring the other topic or the connection between the topics.

Measure of Noncompactness, Fixed Point Theorems, and Applications

Edited by **S. A. Mohiuddine , M. Mursaleen , Dragan S. Djordjević**

This edited volume presents recent research in the theory of the measure of noncompactness and its applications in pure and applied mathematics. Discusses topics such as measures of noncompactness in the space of regulated functions, application in nonlinear infinite systems of fractional differential equations, coupled fixed point theorem, etc. For academic researchers in mathematics.

Modelling Operations Research and Business Analytics

William P Fox , Robert E. Burks

Series: *Advances in Applied Mathematics*

This book provides sample exercises, techniques, and solutions to employ mathematical modeling to solve problems in Operations Research and Business Analytics. Each chapter begins with a scenario and includes exercises built on realistic problems faced by managers and others working in operations research, business analytics, and other fields employing applied mathematics. A set of assumptions is presented and then a model is formulated. A solution is offered followed by examples of how that model can be used to address related issues.

Numerical Methods and Analysis with Mathematical Modelling

William P. Fox U.S. Naval Post Graduate School, **Richard D. West**

Series: *Textbooks in Mathematics*

What sets this book apart is the modeling aspects utilizing numerical analysis (methods) to obtain solutions. The authors cover the basic numerical analysis methods first with simple examples to illustrate the techniques and discuss possible errors. The modeling perspective reveals the practical relevance of the numerical methods in context to real world problems. At the core of this text are the real-world modeling projects. Chapters are introduced and techniques are discussed with common examples. A modeling scenario is introduced that will be solved with these techniques later in the chapter.

Numerical Methods for Scientists and Engineers

With Pseudocodes

Zekeriya Altaç

Series: *Chapman & Hall/CRC Numerical Analysis and Scientific Computing Series*

This book is designed as a primary textbook for a one-semester course on Numerical Methods for sophomore or junior-level students. It covers the fundamental numerical methods required for scientists and engineers, as well as some advanced topics which are left to the discretion of instructors. The objective of the text is to provide readers with a strong theoretical background on numerical methods encountered in science and engineering, and to explain how to apply these methods to practical, real-world problems. Readers will also learn how to convert numerical algorithms into running computer codes.

On the Fractal Language of Medicine

Bruce J. West North Carolina State University, USA;
Center for Nonlinear Science, UNT, Denton, TX, USA, **W. Alan C. Mutch**

Series: *Fractional Order Thinking in Exploring the Frontiers of STEM*

On the Fractal Language of Medicine bridges a very clear gap between the knowledge gained over the last 20 years in the physical and life sciences about network theory, organ synchronicity and communication, the understanding of fractal signatures in health and disease, and the importance of fractional calculus in integrating these concepts. This book will be of great interest to medical students, professionals and academics, as well as students and researchers of applied mathematics, especially those interested in fractional calculus and fractals.

Optimization

100 Examples

Simon Serovajsky Al-Farabi Kazakh National University,
Department of Differential Equations and Control Theory,
Almaty, Kazakhstan

This book is devoted to the analysis of scenarios for which the use of well-known optimization methods encounter certain difficulties. Analysing such examples allows a deeper understanding of the features of these optimization methods, including the limits of their applicability. In this way, the book seeks to stimulate further development and understanding of the theory of optimal control. The study of the presented examples makes it possible to more effectively diagnose problems that arise in the practical solution of optimal control problems, and to find ways to overcome the difficulties that have arisen.

Parabolic Problems

60 Years of Mathematical Puzzles in Parabola

David Angell University of New South Wales, Australia,
Thomas Britz University of New South Wales, Australia
Series: *AK Peters/CRC Recreational Mathematics Series*

Parabola is a mathematics magazine published by the UNSW, Sydney. This book collects the very best of the almost 1800 problems and puzzles from Parabola magazine into a single volume. Many of the problems have been re-mastered, and new illustrations have been added. Topics covered range across geometry, number theory, combinatorics, logic, and algebra. Solutions are provided to all problems, and a chapter has been included detailing some frequently useful problem-solving techniques, making this a fabulous resource for education and, most importantly, fun!

Perturbed Functional Iterations

A Matrix Free Large-Scale Nonlinear System Solver in Applied Science with an Introduction to D-Mapping

Suhrit Dey Eastern Illinois University Charleston, United States of America

Series: *Chapman & Hall/CRC Monographs and Research Notes in Mathematics*

Perturbed Functional Iterations is a large-scale nonlinear system solver. Nature is abundant with events simulated mathematically by nonlinear systems of equations and inequalities. These we call nonlinear models. Often, they are ill conditioned, meaning small changes in data causing huge changes in the output. PFI, which was earlier called PIS (Perturbed Iterative Scheme) is a numerical method to solve nonlinear systems of equations in multidimensional space. This book will guide readers with the proper use of PFI, both in theoretical and practical settings.

Playing with Infinity

Turtles, Patterns, and Pictures

Hans Zantema

Series: *AK Peters/CRC Recreational Mathematics Series*

This is a book about infinity — specifically the infinity of numbers, and how one kind of infinity is greater than all the rest. Along the way the author will demonstrate how infinity can be made to create beautiful 'art', and how this process can help us to understand the fundamental nature of numbers. This book will provide a fascinating read for anyone interested in number theory, infinity, math art, and/or generative art, and could be used as a valuable supplement to any course on these topics.

Puzzle and Proof

A Decade of Problems from the Utah Math Olympiad

Samuel Dittmer, Hiram Golze, Grant Molnar, Caleb Stanford University of California, Davis, United States of America

Series: *AK Peters/CRC Recreational Mathematics Series*

This book is a compilation of the problems and solutions for the first ten years of the Utah Math Olympiad. The problems are challenging but should be understandable at a high school level. Besides putting all problems in one place (70 in total), which have not previously appeared in print, the book provides additional inspiration for many of the problems and will contain the first published solutions for 10 problems that were originally published on the contest flyer. The book will be a fantastic resource for anyone who enjoys mathematical and/or logic puzzles or is interested in studying for mathematics competitions.

Quantitative Literacy Through Games and Gambling

Mark Hunacek

Series: Textbooks in Mathematics

This book was developed to address a need. Quantitative Literacy courses have been established in the mathematics curriculum for decades now. This book is a text for such a course; focused on a single idea that most students seem to already have some interest in and is written at an accessible level. Covers the basic ideas of discrete probability and shows how these ideas can be applied to familiar games (roulette, poker, blackjack, etc.) The gambling material is interweaved through the book, introduced as soon as the necessary mathematics has been developed. Throughout, mathematical formalism and symbolism have been avoided, and numerous examples are provided.

Real Analysis

An Undergraduate Problem Book for Mathematicians, Applied Scientists, and Engineers

Gustavo Da Silva Araújo UEP, Brazil, **Luis Bernal González** US, Spain, **José L. Gámez Merino** UCM, Spain, **María E. Martínez Gómez**, **Gustavo A. Muñoz Fernández** UCM, Spain, **Daniel L. Rodríguez Vidanes** UCM, Spain, **Juan B. Seoane Sepúlveda** UCM, Spain

This is a classical Real Analysis/Calculus problem book. This volume contains a huge number of engaging problems and solutions, as well as detailed explanations of how to achieve these solutions. This latter quality is something that many problem books lack, and it is hoped that this feature will be useful to students and instructors alike.

Regularity Techniques for Elliptic PDEs and the Fractional Laplacian

Pablo Raúl Stinga Iowa State University, United States of America

This book presents important analytic and geometric techniques to prove regularity estimates for solutions to second order elliptic equations, both in divergence and nondivergence form, and to nonlocal equations driven by the fractional Laplacian. The emphasis is placed on ideas and the development of intuition, while at the same time being completely rigorous. The reader should keep in mind that this text is about how analysis can be applied to regularity estimates. Many methods are nonlinear in nature, but the focus is on linear equations without lower order terms, thus avoiding bulky computations.

Scattering of Waves

Theory and Applications

D. N. Ghosh Roy (816)Utah Center For Advanced Imaging Research (UCAIR), Salt Lake City, USA

Scattering of Waves: Theory and Applications explores the underlying concepts, physics and mathematics of wave scattering and wave field structures and self-consistently introduces a range of topics in scalar acoustics and quantum and vector electromagnetic scattering. Primarily aimed at advanced students of physics, engineering and applied mathematics, this text will also be valuable to researchers and faculties in electromagnetics, acoustics and quantum mechanics.

Separate and Joint Continuity

Jiling Cao Auckland University of Technology, New Zealand, **Warren B. Moors** The University of Auckland, New Zealand

Series: Chapman & Hall/CRC Monographs and Research Notes in Mathematics

Separate and Joint Continuity presents and summarises the main ideas and theorems that have been developed on this topic, which lies at the interface between General Topology and Functional Analysis (and the geometry of Banach spaces in particular). The book offers detailed, self-contained proofs of many of the key results. Although the development of this area has now slowed to a point where an authoritative book can be written, many important and significant problems remain open, and it is hoped that this book may serve as a springboard for future and emerging researchers into this area.

Stochastic Methods in Scientific Computing

From Foundations to Advanced Techniques

Massimo D'Elia University of Pisa, Italy, **Kurt Langfeld** Plymouth University, UK, **Biagio Lucini** Swansea University, UK

Series: Chapman & Hall/CRC Numerical Analysis and Scientific Computing Series

This book introduces the reader to advanced concepts in stochastic modelling, rooted in an intuitive yet rigorous presentation of the underlying mathematical concepts. A particular emphasis is placed on illuminating the underpinning Mathematics, and yet have the practical applications in mind. The reader will find valuable insights into topics ranging from Social Sciences and Particle Physics to modern-day Computer Science with Machine Learning and AI in focus. The book also covers recent specialised techniques for notorious issues in the field of stochastic simulations, providing a valuable reference for advanced readers with an active interest in the field.

The Mathematical Contest in Modeling (MCM) Problem Book 1985–2021

William C. Bauldry

The Mathematical Contest in Modeling, or MCM, sponsored by COMAP, is an international competition for undergraduates that began in 1985. Over the past 35 years, the contest has grown from under 100 entries to over 10,000 teams per year. This book offers the best and most notable problems from the competition. A complete listing of MCM problems with links to results, student papers, and judge's commentaries can be found at COMAP's previous-contests webpage.

Vector Partitions, Visible Points and Ramanujan Functions

Geoffrey B. Campbell

This book offers a novel theory of Vector Partitions, though very much grounded in the long-established work of others, that could be developed as an extension to the existing theory of Integer Partitions. The book is suitable for graduate students in physics, applied mathematics, number theory and computational mathematics. It takes the reader up to research level, presenting new results alongside known classical results from integer partitions and areas of vector and multipartite partition theory. It also sets forth new directions for research for the more advanced reader.

The World through the Lens of Mathematics

Natali Hritonenko, Yuri Yatsenko

Following up on their previous book, U.S.A. Through the Lens of Mathematics, the authors offer interesting information about all countries in the world, their history, geography, language, culture, and resources presented in the form of mathematical problems. This unique book aims to shatter the barrier between students and this mathematics by encouraging students to look at mathematics from a different perspective, build a bridge between their surroundings and mathematics and, at the same time, enriches them with new knowledge of culture, history, customs, and geography.

Vector Calculus

Steven G. Krantz Washington University, St. Louis, Missouri, USA, **Harold Parks**

Series: Textbooks in Mathematics

A calculus book must tell the truth. This book is carefully written in the accepted language of mathematics in a readable exposition. It includes useful and fascinating applications, acquaints students with the history of the subject and offers a sense of what mathematics is all about. Technique is presented, yet so are ideas. The author helps students to master basic methods and how to discover and build their own concepts in a scientific subject. There is an emphasis on using modeling and numerical calculation.

2D Semiconducting Materials for Electronic, Photonic, and Optoelectronic Devices

Edited by **Anuj Kumar**, **Ram K. Gupta** Pittsburg State University

Two-dimensional semiconducting materials (2D-SCMs) are the subject of intensive study in the fields of photonics and optoelectronics because of their unusual optical, electrical, thermal, and mechanical properties. The main objective of 2D Semiconducting Materials for Electronic, Photonic, and Optoelectronic Devices is to provide current, state-of-the-art knowledge of two-dimensional semiconducting materials for various applications. Two-dimensional semiconducting materials are the basic building blocks for making photodiodes, light-emitting diodes, light-detecting devices, data storage, telecommunications, and energy-storage devices.

3D Printing in Radiation Oncology

Personalization of Patient Treatment Through Digital Fabrication

Edited by **James Robar** Dalhousie University

Series: *Imaging in Medical Diagnosis and Therapy*

3D printing in Radiation Therapy: A Handbook presents a comprehensive, practical view of the forms in which 3D printing is being integrated into radiation oncology practice. Radiation oncology employs among the most sophisticated digital technologies in medicine. 3D printing is offering enhancements in precision and efficiency through the design and fabrication of patient photon and electron bolus, customized surface and gynecological brachytherapy applicators, proton beam compensators and range shifters, patient immobilization, novel radiation detectors and phantoms.

A Meteorite Killed My Cow

Stuff That Happens When Space Rocks Hit Earth

Richard Greenwood

This book introduces the reader to the fascinating and sometimes bizarre world of space rocks using a simple, clear layman-friendly style. It explains why they are so special and describes their main characteristics. The non-technical approach used throughout the book make it particularly accessible to the general public and it will be of interest to anyone looking to learn more about these cosmic visitors and the wealth of scientific information they contain.

Artificial Intelligence Models for the Dark Universe

Forays in Mathematical Cosmology

Ariel Fernández

Artificial Intelligence (AI) is a valuable tool in this effort since it can reconcile conflicting data from deep space with the extant laws of physics by building models to decipher the dark universe. This book explores the applications of AI and how it can be used to embark on a metaphysical quest to identify the topology of the universe as a prerequisite to implementing a physical model of the dark universe.

2ND EDITION

Biophysical Chemistry

Dagmar Klostermeier University of Muenster, Biophysical Chemistry, **Markus G. Rudolph**

This second edition has been fully updated throughout with novel techniques, with a new chapter on advances in cryo-electron microscopy and exciting new content throughout on big data techniques, structural bioinformatics, systems biology and interaction networks, and artificial intelligence and machine learning. The book is organized in four parts, covering thermodynamics, kinetics, molecular structure and stability, and biophysical methods. Cross-references within and between these parts emphasize common themes and highlight recurrent principles.

Clinical Insights for Image-Guided Radiotherapy

Prostate

Mike Kirby, **Kerrie-Anne Calder**

Series: *Series in Medical Physics and Biomedical Engineering*

This book provides a clinical insight into image-guided radiation therapy (IGRT) for prostate cancer. It starts by setting the clinical scene, discussing immobilisation and standard IGRT practice and then considering important developments like IGRT with non-ionising radiation, adaptive radiotherapy, particle therapy, margins, hypofractionation, clinical outcomes, AI and training.

Dynamic Light Scattering Imaging

Foundations of Non-Invasive Blood Flow Imaging

Anton Sdobnov, **Evgenii Zherebtsov**, **Alexander Bykov**, **Igor Meglinski**

This book examines Dynamic Light Scattering and its derivatives Laser Doppler Flowmetry, Diffusing Wave Spectroscopy, Laser Speckle Contrast Imaging, and Doppler Optical Coherence Tomography for characterizing particle motion in turbid mediums like suspensions and solutions. It focuses on non-invasive blood flow imaging in biological tissues, detailing technological advancements, practical applications, and inherent challenges. Essential for professionals in biomedical optics and medical fields, as well as physics and engineering students, the book highlights its use in brain, skin, and micro-circulation studies, providing key insights and practical guidance.

Elements of Electricity and Magnetism

Theory and Applications

R.K. Tyagi

This book covers the theory, concepts, and applications associated with electricity and magnetism. It discusses various fundamental aspects including Coulomb's Law, electric potential, capacitors, dielectrics, and paramagnetism. Aimed at undergraduate students with an elementary knowledge of mathematical analysis, it also includes solved problems at the end of each chapter for better understanding. Print edition not for sale in South Asia (India, Sri Lanka, Nepal, Bangladesh, Pakistan or Bhutan)

Elements of Mathematical Methods for Physics

Francis E. Mensah

"Elements of Mathematical Methods for Physics" provides students with an approachable and innovative introduction to key concepts of Mathematical Physics, accompanied by clear and concise explanations, relevant real-world examples, and problems that help them to master the fundamentals of Mathematical Physics. The topics are presented at a basic level, for students lacking a prior mathematical background.

2ND EDITION

Essentials of Functional MRI

Patrick W. Stroman

Series: Series in Medical Physics and Biomedical Engineering

Essentials of Functional MRI is explained from the basic theory underlying magnetic resonance imaging. This includes how it can be used to detect dynamic variations in neural activity to become "functional" MRI, and how fMRI can be used for a variety of applications. The reader will gain an understanding of how fMRI is currently used, its limitations, and how it is still developing. This is achieved by explaining the core concepts and building on them to explain how fMRI data are acquired and what physiological information they provide.

4TH EDITION

Finn's Thermal Physics

Andrew Rex University of Puget Sound, Tacoma, Washington, USA, **C.B.P. Finn** Sussex University, UK

While maintaining the style of the original work, the book now covers statistical mechanics and incorporates worked examples systematically throughout the text. It also covers more problems, and incorporates some essential updates, such as discussions on superconductivity, magnetism, Bose-Einstein condensation, and climate change.

Foundations of Medical Physics

Victor J. Montemayor, George Starkschall University of Texas M.D. Anderson Cancer Center, Houston, USA

Foundations of Medical Physics has an overview of the history of cancer and cancer treatment along with a brief introduction to the fundamental principles of Radiobiology constitute Part I of this book, which serves as the motivation for the principles of Radiation Therapy, or cancer treatment with radiation. Part II contains the fundamental ideas from Modern Physics that form the foundation for an understanding of the approaches to treatment used in Radiation Therapy. Finally, Part III shows the applications of Parts I and II to Medical Imaging and Radiation Therapy.

Fundamentals of Photon Physics

Ole Keller

Series: Series in Optics and Optoelectronics

The photon, an abstract concept belonging to a global vacuum, only manifests itself during interaction with matter. Fundamentals of Photon Physics describes the richly faceted, basic theory of photon-matter interaction, selecting a wide number of topics. Together with the author's book Light - The Physics of the Photon (CRC, 2014), both written on a scholarly level, the reader is given a comprehensive exposition of photon wave mechanics, quantum optics and quantum electrodynamics (QED).

5TH EDITION

Gauge Theories in Particle Physics 40th Anniversary Edition

A Practical Introduction, Two Volume Set

Ian J.R. Aitchison Professor Emeritus, University of Oxford, UK, and Visiting Scientist, SLAC National Accel. Lab, CA, USA, **Anthony J.G. Hey** Microsoft Research

The fifth edition of this well-established, highly regarded two-volume set continues to provide a fundamental introduction to advanced particle physics while incorporating substantial new experimental results, especially in the areas of the Higgs and top quark sectors, as well as CP violation and neutrino oscillations. It offers an accessible and practical introduction to the three gauge theories comprising the Standard Model of particle physics: quantum electrodynamics (QED), quantum chromodynamics (QCD), and the Glashow-Salam-Weinberg (GSW) electroweak theory.

Habitable Exoplanets for Extra-Terrestrials

C.R. Kitchin

This book explores the questions of What, Why, When, How and Where might we find extra-Terrestrials (a.k.a. Aliens) and their habitats throughout the Universe– and Who might they be? Starting from ourselves and the Earth and eventually speculating about life forms that might span multiple Universes, it provides an accessible introduction to extra-terrestrial life, the search for extra-terrestrial intelligence, and exoplanets.

Handbook of Adaptive Optics

From Foundations to Applications

Edited by **Enrique Josua Fernandez** University of Murcia

Adaptive Optics (AO) is a technique allowing the manipulation of the wavefront of the light benefitting multiple fields like Microscopy, Optical Coherence Tomography, Visual Testing, Optical Communications, and Astronomical Optics, just to mention some examples. Handbook of Adaptive Optics contains a complete picture of the technique from the foundations to the most promising applications of AO in a variety of fields.

High Entropy Materials

Fundamentals to Emerging Applications

Edited by **Anuj Kumar, Ram K. Gupta** Pittsburg State University

High Entropy Materials covers the fundamental concepts of these materials and their emerging applications. To fulfil growing energy demand, scientists are looking for novel materials which can be used for the fabrication of high-performance energy devices. Many materials such as graphene, carbon nanotubes, and metal oxides are used in energy production and storage. A new class of metal oxides, multicomponent metal oxides, known as high entropy materials, have attracted considerable attention not only for their energy applications but also other emerging applications such as use in sensors, catalysts, and CO₂ absorption.

Image-guided Focused Ultrasound Therapy

Physics and Clinical Applications

Edited by **Feng Wu, Gail ter Haar, Ian Rivens** Institute of Cancer Research, Sutton, Surrey, United KingdomSeries: *Series in Medical Physics and Biomedical Engineering*

Focusing on applications in cancer treatment, this book covers basic principles, practical aspects, and clinical applications of focused ultrasound therapy. It reviews the medical physics and bio-effects of focused ultrasound beams on living tissues, dosimetric methods and measurements, transducer engineering, image guidance and monitoring including MRI and ultrasound, treatment delivery systems and clinical applications.

Introduction to Entropy

The Way of the World

Jonathan Allday The Royal Hospital School, Ipswich, UK,
Simon Hands

This book will draw these diverse threads together and present entropy as one of the crucial physical concepts. It will cover a range of different applications of entropy, from the classical theory of thermodynamics, the statistical approach, entropy in quantum theory, information theory and finally its manifestation in black hole physics. Each will be presented in a manner suitable for both undergraduates and interested laypersons with no previous knowledge. The book will take an overview of these areas and see to what extent the concept of entropy is being treated in the same way in each, and also how it differs.

Introduction to Functional Nanomaterials

Edited by **M. Anusuya**, **Fabian I. Ezema** University of Nigeria, Nsukka, Enugu, Nigeria

This book provides a comprehensive review of nanomaterials, including essential foundational examples of nanosensors, smart nanomaterials, nanopolymers, and nanotubes. Chapters cover their synthesis and characteristics, production methods, and applications, with specific sections exploring nanoelectronics and electro-optic nanotechnology, nanostructures, and nanodevices.

Introduction to Photocatalysis

Fundamentals and Applications

Tahir Iqbal Awan, **Sumera Afsheen**, **Iqra Maryam**

Explore the intriguing world of photocatalysis with Introduction to Photocatalysis: Fundamentals and Applications. This book explores the complexities of photocatalytic processes, investigating the contributing elements, nano-photocatalyst manufacturing methodologies, and their wide applications in the energy and environmental sectors. Additionally, sophisticated modification approaches that may be used to improve the efficiency of visible light-driven processes are discussed. Key features include novel methodologies of photocatalysts, providing an insight on fundamentals and methodology; and examples of efficient applications of photocatalysis.

2ND EDITION

Introduction to Python for Science and Engineering

David J. Pine New York University, NY, USA

Series: Series in Computational Biophysics

Introduction to Python for Science and Engineering offers an incisive introduction to the Python programming language for use in any science or engineering discipline. The approach is pedagogical, which means starting with examples and extracting more general principles from that experience. Readers will learn the basics of Python syntax, data structures, input and output, conditionals and loops, user-defined functions, plotting, animation, and visualization. They will also learn how to use Python for numerical analysis, including curve fitting, numerical integration, solutions to differential equations, and fast Fourier transforms.

2ND EDITION

Introduction to Topological Quantum Matter & Quantum Computation

Tudor D. Stanescu West Virginia University, Morgantown, USA

Addressing these and other related questions, Introduction to Topological Quantum Matter & Quantum Computation provides an introduction to and a synthesis of a fascinating and rapidly expanding research field emerging at the crossroads of condensed matter physics, mathematics, and computer science. Providing the big picture, this book is ideal for graduate students and researchers entering this field as it allows for the fruitful transfer of paradigms and ideas amongst different areas, and includes many specific examples to help the reader understand abstract and sometimes challenging concepts.

IoT Sensors

An Exploration of Sensors for Internet of Things

Vinod Kumar Khanna CSIR-Central Electronics Engineering Research Institute, India

Series: Series in Sensors

This book introduces the basics of internet of things (IoT), and explores the foundational role of sensors in internet-of-things applications. Internet of things is a network of devices and objects: sensors, actuators, hardware, software, human beings, domestic appliances, health monitoring equipment, and other things connected to the internet, which is designed to operate in a coordinated fashion to receive, process and interpret signals and take appropriate action.

Non-Equilibrium Statistical Mechanics

James H. Luscombe

Statistical mechanics provides a framework for relating the properties of macroscopic systems (large collections of atoms, such as in a solid) to the microscopic properties of its parts. However, what happens when macroscopic systems are not in thermal equilibrium, where time is not only a relevant variable, but also essential? That is the province of nonequilibrium statistical mechanics – there are many ways for systems to be out of equilibrium! The subject is governed by fewer general principles than equilibrium statistical mechanics and consists of a number of different approaches for describing nonequilibrium systems.

Nuclear Materials

An Overview

Haydee Domenech

This book reviews the critical scope of nuclear materials, which play an essential role in decreasing greenhouse gas emissions. It traces historical landmarks from the years preceding World War II to the atomic bomb era. Key topics covered include the concept of nuclear materials and their connection to the Non-Proliferation Treaty (NPT), the steps of the nuclear fuel cycle, and advanced reactor technologies. Additionally, the book addresses safety and security considerations, including radioactive waste and spent fuel management.

Nuclear Theory in the Age of Multimessenger Astronomy

Edited by **Omar Benhar** Istituto Nazionale di Fisica Nucleare, Roma, Italy, **Alessandro Lovato**, **Andrea Maselli**, **Francesco Pannarale**

This book provides a self-contained account of neutron star properties, microscopic nuclear dynamics and the recent observational developments in multimessenger astronomy. It also discusses the unprecedented possibilities to shed light on long standing and fundamental issues, such as the validity of the description of matter in terms of pointlike baryons and leptons and the appearance of deconfined quarks in the high density regime.

Numerical Methods

Classical and Advanced Topics

Shanmuganathan Rajasekar

This book presents a pedagogical treatment of a range of numerical methods to suit the needs of undergraduate and postgraduate students, and teachers and researchers in physics, mathematics, and engineering. For each method, the derivation of the formula/algorithm, error analysis, case studies, applications in science and engineering and the special features are covered. A detailed presentation of solving time-dependent Schrödinger equation and nonlinear wave equations, along with the Monte Carlo techniques will aid in students' understanding of several physical phenomena including tunnelling, elastic collision of nonlinear waves, and diffusion of neutrons through simulation study.

Origins of Life Volume II

Contemplations and Doubts

Vladivoj Valkovic

In Origins of Life Volume II, the life, as well as its origin, are inspected from traditional and unexpected points of view. The book takes an interdisciplinary approach, discussing astrobiology, chemical evolution and how the universe accommodates life, molecular biology, and philosophy. It is an open-minded approach, fully referenced throughout, and each chapter includes a further reading section for anyone wishing to learn more about that perspective on the origins of life.

Power Systems Amid the 4th Industrial Revolution

Edited by **Diaa-Eldin A. Mansour**, **Mohamed Gamal Hussien**, **Partha Sarathi Subudhi**, **A. Rakesh Kumar**, **Sanjeevikumar Padmanaban**

Series: River Publishers Series in Power

This book discusses the operation of power systems amid the 4th industrial revolution and the value of Industry 4.0 technologies to grid operators and end customers. The concept of smart grids was introduced years ago, but their practical implementation into power grids was delayed as the information communication technology infrastructure was not ready.

Raman Scattering on Emerging Semiconductors and Oxides

Zhe Feng

Raman Scattering on Emerging Semiconductors and Oxides presents Raman scattering studies. It describes the key fundamental elements in applying Raman spectroscopies to various semiconductors and oxides without complicated and deep Raman theories. Across nine chapters, it covers:

- SiC and IV-IV semiconductors,
- III-GaN and Nitride semiconductors
- III-V and II-VI semiconductors,
- ZnO-based and GaO-based semiconducting oxides,
- Graphene, ferroelectric oxides and other emerging materials,

2ND EDITION

Relativistic Quantum Mechanics

An Introduction to Relativistic Quantum Fields

Luciano Maiani University of Rome, La Sapienza, and INFN Sezione di Roma, Rome, Italy, **Omar Benhar** Istituto Nazionale di Fisica Nucleare, Roma, Italy

Written by two of the most prominent leaders in particle physics, *Relativistic Quantum Mechanics: An Introduction to Relativistic Quantum Fields* provides a classroom-tested introduction to the formal and conceptual foundations of quantum field theory. Designed for advanced undergraduate- and graduate-level physics students, the text only requires previous courses in classical mechanics, relativity, and quantum mechanics.

Spintronics

A Primer

Jean-Philippe Ansermet

A sound understanding of magnetism, transport theory, spin relaxation mechanisms, and magnetization dynamics is necessary to engage in spintronics research. In this primer, special effort has been made to give straightforward explanations for these advanced concepts. This book will be a valuable resource for graduate students in spintronics and related fields. Concepts of magnetism such as exchange interaction, spin-orbit coupling, spin canting, and magnetic anisotropy are introduced.

Super-Resolution Microscopy for Material Science

Edited by **Lorenzo Albertazzi, Peter Zijlstra**

This book describes the theory, principles, and practice of super-resolution microscopy in the field of materials science and nanotechnology. There is a growing interest in the applications of SRM beyond biology as new synthetic materials, such as nanoscale sensors and catalysts, nanostructured materials, functional polymers, and nanoparticles, have nanoscopic features that are challenging to visualize with traditional imaging methods.

2ND EDITION

The Mathematics of Thermal Modeling

An Introduction to the Theory of Laser Material Processing, 2e

John Michael Dowden

The Mathematics of Thermal Modeling 2nd Edition provides an introduction to the basics of the mathematics and physics needed to understand and use the physical principles employed in constructing models of a number of aspects of thermal modeling in industrial processes. The book demonstrates how insight can be gained from mathematical enquiry at a simple level and helps workers understand the way in which more sophisticated models can be constructed. Some necessary but less familiar mathematical techniques are explained in greater detail than before and some discussion of wave-like features in welds is now included.

Ultra-Narrowband Multispectral Imaging

Techniques and Applications

Janis Spigulis

This book provides insight into an unconventional modality of imaging where several spectral images are captured by a single snapshot under multi-laser illumination, ensuring high-speed imaging within extremely narrow spectral bands. This method has three distinct advantages, if compared to common commercial multispectral imaging systems - considerably improved spectral selectivity (or colour sensitivity) of imaging, avoided motion artefacts in the spectral image sets, and simpler/faster image processing as integrals over the spectral bands of imaging are replaced by numbers of the fixed working wavelengths.

Visual Astronomy with a Small Telescope

Sean G. Ryan

The book presents a practical guide to using a small astronomical telescope of a size that corresponds to most "first" telescopes - around 75 to 150 mm, i.e. 3 to 6 inches, in diameter. The book is intended for people who are sufficiently interested in astronomy to have purchased a small telescope or received one as a gift, but who are still developing experience of using one.

Visualizing Quantum Mechanics with Python

Steve Spicklemire

The goal of this book is to reduce the complexity and clarify the abstractions with concrete visual examples driven by simple python programs. It is assumed that the reader is concurrently taking a course in quantum mechanics, or self-studying quantum mechanics, but is looking for supplementary material to help with understanding and visualizing how quantum mechanics works.

Writing In-House Medical Device Software in Compliance with EU, UK, and US Regulations

Philip S. Cosgriff, Matthew J. Memmott

This book is a comprehensive guide to producing medical software for routine clinical use. It is a practical guidebook for medical professionals developing software to ensure compliance with medical device regulations for software products intended to be sold commercially, shared with healthcare colleagues in other hospitals, or simply used in-house. It compares the latest regulatory requirements in different global territories, including the most recent EU regulations as well as current UK and US regulations.

2ND EDITION

XAFS for Everyone

Scott Calvin Lehman College, the City University of New York

XAFS for Everyone provides a practical, thorough guide to x-ray absorption fine-structure (XAFS) spectroscopy for both novices and seasoned practitioners from a range of disciplines. This second edition now includes chapters on spatial and temporal resolution, alternative measurement modes including resonant inelastic x-ray scattering (RIXS) and high-energy resolution fluorescence detection (HERFD), and an expanded chapter on experimental design. In addition, this edition adds new sections on wavelet transforms, blind source separation, free electron lasers, and theoretical XANES standards, as well as three new case studies.

6G Connectivity-Systems, Technologies, and Applications

Digitalization of New Technologies, 6G and Evolutio

Edited by **Ramjee Prasad**, **Dnyaneshwar Shirrangal Mantri**, **Sunil Kumar Pandey**, **Albena Dimitrova Mihovska**

Series: *River Publishers Series in Communications and Networking*

This book covers need for 6G connectivity arising from the pursuit of higher data speeds, ultra-low latency, massive IoT connectivity, enhanced spectral efficiency, and the facilitation of new and transformative applications. By addressing these drivers and expectations, 6G aims to revolutionize wireless communication, opening up a realm of possibilities for industries, societies, and individuals.

A Guide to Software Quality Engineering

Shravan Pargaonkar

Dive into the fundamental principles of software quality engineering, understanding the critical role it plays in ensuring customer satisfaction, user experience, and the overall success of your software products. Whether you're a seasoned professional or a budding enthusiast, this book caters to all levels of expertise. Topics cover include: DevOps, software testing, requirements, Agile, and Lean.

A Reference Manual for Data Privacy Laws and Cyber Frameworks

Ravindra Das

Series: *Cyber Shorts*

In this book we detail the tenets and provisions of three key Data Privacy Laws: Ø The GDPR Ø The CCPA Ø The CMMC We also provide a general framework at the end as to how a business can come into compliance with these various Data Privacy Laws. Also, we first provide an in depth overview of the importance of Data and Datasets, and how they are so relevant to these Data Privacy Laws just mentioned.

Advances in Digital Marketing in the Era of Artificial Intelligence

Case Studies and Data Analysis for Business Problem Solving

Edited by **Moez Ltifi** Sfax University, Tunisia

This book highlights the technological advances that are transforming the future of digital marketing and covers important areas of research in this field. The book demonstrates advances in digital marketing as well as tools, techniques, methods and strategies based on artificial intelligence. It also identifies gaps in research into effective digital marketing tools, techniques and methods, and will bridge the interaction between digital marketing strategies and organisations' business plans on the one hand, and customer relations on the other, in the age of artificial intelligence.

AI and IoT Technology and Applications for Smart Healthcare Systems

Edited by **Alex Khang**

Series: *Advances in Computational Collective Intelligence*

Covering, methodologies, technologies, approaches, models, frameworks, theory, and practice, this book examines how to meet the challenges associated with applying AI-collaborative IoT technology as well as Big Data in the design and implementation of advanced infrastructure for the smart healthcare system. This book targets a mixed audience of students, engineers, scholars, researchers, academics and professionals who are learning, researching, and working in the field of healthcare.

Artificial Intelligence for Art Creation and Understanding

Edited by **Luntian Mou**

Series: *Multimedia Computing, Communication and Intelligence*

AI-Generated Content (AIGC) is a revolutionary engine for digital content generation. AI is capable of not only creating paintings or music comparable to human masterpieces, but also understanding and appreciating art works. For both professionals and amateurs, AI is an enabling tool and a companion to open and enjoy a new world of art. This book covers state-of-the-art AI technologies for art creation, understanding, and evaluation. Each chapter provides an entry point for readers, presenting SOTA AI technologies for art creation and understanding, and covers the fascinating combination of AI with traditional Chinese art.

Artificial Intelligence in Medicine

Edited by **Thompson Stephan** M. S. Ramaiah University of Applied Sciences, India

In the ever-evolving realm of healthcare, "Artificial Intelligence in Medicine" emerges as a trailblazing guide, offering an exhaustive exploration of the transformative power of Artificial Intelligence (AI). Crafted by leading experts in the field, this book sets out to bridge the gap between theoretical understanding and practical application, presenting a comprehensive journey through the foundational principles, cutting-edge applications, and the potential impact of AI in the medical landscape.

Artificial Intelligence Solutions for Cyber-Physical Systems

Edited by **Pushan Kumar Dutta** Amity University Kolkata, **Pethuru Raj**, **B. Sundaravadivazhagan** University of Technology and Applied Sciences-AI Mussana, **CHITHIRAI PON Selvan**

This book focuses on the design, implementation, and management of secure Human Cyber-Physical Systems (HCPs) in smart manufacturing environments. It covers a wide range of topics, including risk assessment, security architecture, data privacy, and standard specifications for HCPs. The topic highlights the importance of securing communication protocols, the role of artificial intelligence and machine learning in threat detection and mitigation, and the need for robust cybersecurity frameworks in the context of smart manufacturing.

Artificial Intelligence-Based 6G Networking

Edited by **Radhika Ranjan Roy** United States Army Research Laboratory, USA

This book deals with the emerging 6G networking and services, which are expected to be implemented in the year 2030. With 6G, a paradigm shift is happening with the deep convergence of computing and communication with inherent support of AI in network functional entities. 6G networks will be using AI native interfaces from radio access networks (RANs), wireline access networks, and long-haul wide area networks including smart intelligent user equipment (UE), switches/routers, application servers, and databases. This book provides a unified framework for the deep convergence of computing and communications, that can be jointly optimized as a single integrated system using AI.

Aspects of Quality Management in Value Creating in the Industry 5.0 Way

Edited by **Mohamed Abouhawwash** Mansoura University, Egypt., **Joanna Rosak-Szyrocka** Czestochowa University of Technology, Poland, **Shashi Kant Gupta**

The book 'Aspects Of Quality Management In Value Creating In The Industry 5.0 Way' focuses on the challenges that companies in the field of quality management in Industry 5.0 face, particularly in relation to client value aspects. Industry 5.0 suggests a new stage of industrial growth. With its innovative approach, Industry 5.0 will contribute to the resolution of the manufacturing-social need mismatch issue. The book devotes a lot of space to the issues of client satisfaction, cybersecurity, e-commerce, TQM, and collaborative work between robots and humans in the company.

Bioinformatics of the Brain

Edited by **Kayhan Erciyes**, **Tuba Sevimoğlu** Hamidiye Institute of Health Sciences, Turkey

Recent advancements in neuroimaging technologies has opened new frontiers in neuroscience enabling unprecedented finer analysis of the brain functions. This relatively new approach of brain analysis which may be termed Bioinformatics of the Brain is the main subject of this volume aiming to provide a thorough review on various bioinformatics approaches for analyzing the functioning of the brain and understanding brain diseases such as neurodegenerative diseases, brain tumors, and neuropsychiatric disorders. Authors from various disciplines in this volume each focus on a different aspect aiming to expand our understanding of this area of research.

Blockchain and AI

The Intersection of Trust and Intelligence

Edited by **Niaz Chowdhury**, **Ganesh Chandra Deka** DG(DGT), MSDE, GoI

Series: *Smart Technology*

In the rapidly evolving landscape of the digital age, two technologies stand out for their transformative potential: Artificial Intelligence (AI) and Blockchain. This book offers an incisive exploration of the confluence between these technological titans, shedding light on the synergies, challenges, and innovations that arise at this intersection. The chapters explore thought-provoking analyses, informed by cutting-edge research and expert perspectives, that navigate the nuanced interplay of decentralised ledger technology and intelligent systems.

Blockchain Technology in the Automotive Industry

Edited by Ghulam Yasin , Amit Kumar Tyagi VIT, India, Tuan Anh Nguyen

A blockchain-based distributed framework can be used for automobiles in the smart city. This framework can include a novel miner node selection algorithm for the blockchain-based distributed network architecture. This book explores how blockchain technology can be used in the automotive industry, from smart manufacturing to the smart city.

Cognitive Hack and Cognitive Risk Set

James Bone Global Compliance Associates, LLC, Lincoln, Rhode Island, USA, **Jessie H Lee** Better Future Strategies, LLC

Series: Security, Audit and Leadership Series

Cognitive Hack explores a broad cross section of research and actual case studies to draw out new insights that may be used to build a benchmark for IT security professionals. This research takes a deeper dive beneath the surface of the analysis to uncover novel ways to mitigate data security vulnerabilities, connect the dots and identify patterns in the data on breaches. Cognitive Risk is a book about the least understood, but most pervasive risk to mankind – cognitive risks. Cognitive risks are subconscious and unconscious influence factors on human decision-making: heuristics and biases.

Cognitive Radio-based Internet of Vehicles

Architectures, Applications and Open issues

Edited by Syed Hashim Raza Bukhari , Muhammad Maaz Rehan , Mubashir Husain Rehmani

The incorporation of Cognitive Radio (CR) into the Internet of Vehicles (IoV) has emerged as the Intelligent Transportation System (ITS). Section 1 covers the aspects of cognitive radio when it provides support to IoV. The challenges which limit the performance of ITS are highlighted in this chapter. Section 2 covers the applications of ML techniques to the CR-IoV systems and highlights their issues and challenges. Section 3 covers the examination of ML in conjunction with Data Science applications which further widens the scope of the readership.

Construction Audit

Building a Solid Foundation

Denise Cicchella

Series: Security, Audit and Leadership Series

Construction Audit is becoming more and more prevalent, and organizations are appreciating its importance. Learning the basics of construction auditing can provide valuable knowledge and skills for professionals and students in the construction industry, offering insights into financial management, risk mitigation, compliance, and overall project oversight. This book is not just for auditors, however. It could be used by project managers, integrity monitors, construction managers and anyone else who wants to understand the elements that go into creating a successful project. Legal teams involved in contracting and overpayment recovery will also benefit.

Continuous Auditing with AI in the Public Sector

Edited by Lourens J. Erasmus University of South Africa, South Africa, Sezer Bozkus Kahyaoğlu Uni of South Africa Financial Gov Dep, South Africa

Series: Security, Audit and Leadership Series

This book deals with the effects of current technological developments in the public sector on auditing and risk management activities. Therefore, it is a resource for public internal auditors to create a digital audit strategy based on artificial intelligence and blockchain-based applications. Institutionalisation of their structures is important for public sector internal auditors, which is a critical position that ensures institutionalisation. This book will be pioneering work based on CA/CM approaches using various AI and blockchain-based tools, and techniques.

Data-Driven Modelling and Predictive Analytics in Business and Finance

Concepts, Designs, Technologies, and Applications

Edited by Alex Khang, Rashmi Gujrati, Hayri Uygun, R. K. Tailor, Sanjaya Gaur

Series: Advances in Computational Collective Intelligence

This book focuses on the opportunities and challenges for data-driven modelling and predictive analytics for business systems. It covers fundamental concepts as well as advanced techniques, technologies, and tools. It delves into such areas and applications as data-driven robotics process automation systems, smart cities and urban development, smart healthcare, and smart communication technologies. The book discusses technology in the context of innovation, business development, and business management.

Crypto Millionaires

Blockchain: A Chance for All?

Mateusz Mach

Blockchain: The Key to the World of Cryptocurrencies. A word that sounds like a promise of wealth. But what exactly is Blockchain? Some see Blockchain as a savior from greedy bankers, while others view it as a tool for building cryptocurrencies that undermine central banks. Which image is closer to reality? The story of Blockchain is not just a tale of mathematical experiments. It's primarily a story of the age-old attempt to record human activities and the value that flows from them. This time, however, the goal is to make it accessible to everyone on equal terms. But will it truly be equal?

Data-Driven Farming

Harnessing the Power of AI and Machine Learning in Agriculture

Edited by Syed Nisar Hussain Bukhari

The book explores how the latest advances in technology can help make better decisions and maximize yields. It provides a detailed overview of the intersection of data, AI, and machine learning in agriculture. Offering real-world examples and case studies it demonstrates how these tools can help farmers improve efficiency, reduce waste, and increase profitability. It examines how AI and ML in agriculture can be used to achieve sustainable and profitable farming practices. The book also gives introduction to the basics of data-driven farming, including an overview of the key concepts, tools, and technologies that are essential for success.

Deep Learning for Smart Healthcare

Trends, Challenges and Applications

Edited by **K. Murugeswari**, **B. Sundaravadivazhagan**, **S Poonkuntran** VIT Bhopal University, **Thendral Puyalnithi** ASSISTANT PROFESSOR SENIOR, DEPT OF ARTIFICIAL INTELLIGENCE&DATA SCIENCE, MEPCO SCHLENK ENGI COLLEGE

Hospitals are currently not able to sufficiently meet the demand for quality patient outcomes due to increasing population and diversifying diseases. The shift from traditional healthcare approaches to ones assisted by machine learning hold promise. Managing patient data is critical and complex, and deep learning can provide solutions to manage such complexity. The book is a baseline reference for researchers and academicians who are investigating the application of deep learning algorithms in the healthcare sector. It focuses on medical imaging and healthcare data analytics.

Digital Forensics and Cyber Crime Investigation

Recent Advances and Future Directions

Edited by **Ahmed A. Abd El-Latif**, **Lo'ai A. Tawalbeh** Texas A&M University, **Manoranjan Mohanty** University of Technology Sydney, **Brij B. Gupta** Director, International Center for AI & CCR, **Konstantinos E. Psannis**

In the ever-evolving landscape of digital forensics and cyber-crime investigation, staying ahead with the latest advancements is not just advantageous—it's imperative. This book serves as a crucial bridge, connecting the dots between the present knowledge base and the fast-paced developments in this dynamic field. This book aims to serve as a beacon for practitioners, researchers, and students who are navigating the intricate world of digital forensics and cyber security. By offering a blend of recent advancements and speculative future directions, it not only enriches the reader's understanding of the subject matter but also inspires innovative thinking.

Digital Twin Technology and Applications

Edited by **A. Daniel**, **Srinivasan Sriramulu**, **N. Partheeban**, **SANTHOSH JAYAGOPALAN**

The book focuses on the technological advances that digital twin applications require. It discusses the creation of intelligent systems, services, and environments and addresses real-time Big Data communication using the Internet of Things (IoT). The goal of this book is to examine problems, concerns, and solutions for supporting digital twins with Big Data and Artificial Intelligence (AI). The book also explains how to stream real-time big data on an IoT platform using various ways and strategies.

eGovernment Whole-of-Government Approach for Good Governance

The Back-Office Integrated Management IT Systems

Said Azelmad University of Moulay Ismail, Morocco

The book embarks on the transformative reforms in Public Administration at the nexus of digital innovation and governance paradigms in Morocco. The book addresses the new paradigms of eGovernment, which transcends traditional boundaries of public administration, offering a meticulous blend of theoretical depth and practical insights, through its sophisticated methodological approach. The book investigates eGovernment Whole-of-Government Approaches (WGA) efficiency in back-office transactions (G2G) for promoting good governance ethics, through its theoretical underpinnings and practical applications.

From Street-smart to Web-wise®

A Cyber Safety Training Program Built for Teachers and Designed for Children (Book 1)

Al Marcella, **Brian Moore**, **Madeline Parisi**

In a world where tiny fingers are as familiar with touchscreens as they are with crayons, ensuring our children's safety online has never been more crucial. "From Street-smart to Web-wise®: A Safety Training Manual Built for Teachers and Designed for Children," isn't just another book—it's a passionate call to action for teachers, a roadmap to navigate the digital landscape safely, with confidence and care. Written by authors, who are recognized experts in their respective fields, this accessible manual is a timely resource for educators. Dive into engaging content that illuminates the importance of cyber safety, not only in our classrooms but extending into the global community.

Generative AI

Phishing And Cybersecurity Metrics

Ravindra Das President, HTG Solutions, IL, USA

Series: Cyber Shorts

The Cybersecurity Landscape is for sure changing. The advent of Generative AI is making this much worse. For example, a Cyberattacker can now use something like ChatGPT to craft the content for Phishing Emails that are so convincing that it is almost to tell the difference of what is real and fake. This is also clearly evident in the use of Deepfakes, where real people are replicated into fake ones in order to create videos to lure the unsuspecting victims to a fake website. But, Generative AI can also be used for the good also, to combat Phishing Attacks. This is the topic of this book.

Generative AI and Cyberbullying

Ravindra Das President, HTG Solutions, IL, USA

The scalability and diversity of Gen AI has allowed it be used in a wide myriad of industries and applications. But although it has been primarily designed to serve the greater good, it can also be used for very nefarious purposes, such as Online Harassment and Cyberbullying. In this particular book, we actually take the good side of Gen AI, provide an overview as to how it can be used to help combat Cyberbullying.

Global Audit Leadership

A Practical Approach to Leading a Global Internal Audit (GIA) Function in a Constantly Changing Internal and External Landscape

Audley L. Bell

Series: Security, Audit and Leadership Series

In times of rapid change, organizations are often forced to adjust their strategic plans. Stakeholders usually need assistance to effectively manage the risks, unprecedented at times, and capitalize on the opportunities that usually come with change. Change management must be effectively executed to assist in ensuring the viability of the organization. The book provides advice and guidance to assist stakeholders navigate the challenges and demands of change. It includes insights, measures, and tools that have contributed to my success as a leader in the internal audit profession for 27 years.

How Not to Fail at Projects

Stopping the Project Management Insanity Spiral

Claude H. Maley

They say you learn from your mistakes. They also say that repeating the same thing and expecting a different result is insanity. This book aims to analyze the reasons for failure in project management. It is filled with stories, anecdotes and satires that highlight how organizations and project managers fall into an "insanity spiral". It provides Sanity Checks designed to keep project managers from repeating the same mistakes and to help them become project champions.

Innovations and Applications of Technology in Language Education

Edited by **Hung Phu Bui , Raghendra Kumar , Nilayam Kumar Kamila**

Series: *Advances in Computational Collective Intelligence*

The linguistics and language education world has recently experienced a rapidly proliferating interest in applying technology. This interdisciplinary area is bridging the gap between two previously separate fields. This book contextualizes language education technology and examines how it is currently applied, discusses how it should be applied, and indicates future development. It focuses on the use of technology to improve language teaching and learning, the potential and concerns regarding technology-assisted language testing and assessment, and on using technology in English language education.

Insecure Digital Frontiers

Navigating the Global Cybersecurity Landscape

Akashdeep Bhardwaj University of Petroleum and Energy Studies

'Insecure Digital Frontiers' is an immersive exploration into the tumultuous realm of cybersecurity, where the ever-expanding digital frontiers are both the battleground and the prize. From the shadows of cybercriminal exploits to the sophisticated dance of advanced persistence threats, this book delves into the vulnerabilities that define our interconnected world. With a panoramic lens, it navigates through the challenges and opportunities that shape the global cybersecurity landscape, offering readers a comprehensive understanding of the insecurities that permeate our digital existence.

Intelligent Systems and Sustainable Computational Models

Concepts, Architecture, and Practical Applications

Edited by **Rajganesh Nagarajan , Senthil Kumar Narayanasamy , Ramkumar Thirunavukarasu , Pethuru Raj** IBM Pvt.Ltd., Manyata Tech Park, Bangalore, India

Intelligent Systems and Sustainable Computational Models: Concepts, Architecture, and Practical Applications explores this ensemble approach towards building a sustainable future. It explores novel solutions for such pressing problems as smart healthcare ecosystems, energy efficient distributed computing, affordable renewable resources, mitigating financial risks, monitoring environmental degradation, and balancing climate conditions. The book helps researchers to apply intelligent systems to computational sustainability models to propose efficient methods, techniques, and tools.

Internet of Things Applications and Technology

Edited by **Faheem Syeed Masoodi , Alwi Bamhdi , Ankush Manocha , Tawseef Ahmed Teli , Zubair Masoodi , Faheem Ahmad Reegu**

The book provides a comprehensive examination of the integration of IoT technology into various industries and its impact on daily life, with a focus on the most recent advancements in the field. The technical aspects of IoT are thoroughly discussed, including the implementation of cutting-edge sensors, data communication protocols, and network topologies. The book also covers the latest advancements in areas such as edge computing, 5G networks, and AI-powered IoT devices. Emphasis is placed on the examination of IoT in real-world applications, including healthcare, agriculture, transportation, and home automation.

Internet of Things Vulnerabilities and Recovery Strategies

Edited by **Fahim Masoodi , Alwi Bamhdi , Majid Ahmad Charoo , Zubair Masoodi , Arif Lattoo , Gousiya Hussain**

The book covers the prime requirements for a secure Internet of Things (IoT) setup. The book discusses security concerns of an IoT setup by uncovering the present challenges in standardization of data routing, data integrity, device supervision, IoT integration, information storage, IoT performance, and security solutions. The book further demonstrates the modelling of varied possible attacks on an IoT setup and possible recovery strategies.

Leveraging the Potential of Artificial Intelligence in the Real World

Smart Cities and Healthcare

Edited by **Tien Anh Tran** Vietnam Maritime University, Haiphong, Vietnam, **Edeh Michael Onyema** Coal City university, Nigeria, **Arij Naser Abougreen** University of Tripoli, Libya

Comprising seven insightful chapters, this book offers a comprehensive overview of key topics shaping the future of healthcare system and smart cities. This book is a combination between the smart healthcare system and the intelligent transportation system based on the AI. From the telemedicine global accessibility to the application of data mining techniques in predicting cardiac diseases and detecting anti-malaria drug resistance, each chapter presents cutting-edge research and practical applications.

Managing Customer Relationships Using Customer Care Techniques

Strategy Development of an International Enterprise

Anna Brzozowska Czestochowa University Of Technology, Poland, **Stanisław Brzeziński** Akademia Ekonomiczno-Humanistyczna, Poland, **Arnold Pabian** Czestochowa University of Technology, **Barbara Pabian** University of Economic in Katowice, Poland

In today's global business environment, Customer Relationship Management (CRM) has become the key to the success of many international enterprises. "Managing Customer Relationships Using Customer Care Techniques: Strategy Development of an International Enterprise" offers a comprehensive analysis of this crucial business aspect, focusing on how companies can effectively manage their customer relationships in the context of global expansion. This book stands out with its unique approach to CRM, blending theory with practice, providing readers with a deep understanding of how CRM influences the strategies of international enterprises.

ManusCrypt

Designed for Mankind – Anthropocentric Information Security

Prashant A Upadhyaya

Information Security primarily serves these six distinct purposes – Authentication, Authorization, Prevention of Data Theft, Sensitive Data Safety / Privacy, Data Protection / Integrity, Non-Repudiation. The entire gamut of infosec rests upon Cryptography. The author begins as a protagonist to explain that modern cryptography is more suited for machines rather than humans. This is explained through a brief history of ciphers and its evolution into cryptography and its various forms.

Market and Technical Knowledge Integration in R&D Intensive Companies

Marcin Soniewicki

The book examines the role of market and technical knowledge integration in creating innovation as well as superior business performance of R&D intensive companies. R&D intensive enterprises require both market and technical knowledge resources, which are worth little by themselves. The book explains theoretical as well as practical information on market and technical knowledge integration. Providing a new approach to this topic, it considers current R&D intensive companies' ways of functioning based on qualitative and quantitative research and offers practical advice on improving market and technical knowledge integration in R&D intensive companies.

Model-Driven Software Systems Development Using the Meta-Artifact Process

Wayne O'Brien

The book is concerned with software systems, specifically software code. It describes three major innovations for making software, which are combined with five widely used enabling technologies, to provide a complete, hypothesis-driven, software development process. Having complete requirements is essential for making good software and supports hypothesis-driven software development. The book explains ways to ensure that requirements are complete and correct and identifies likely points during development to form alternative hypotheses about them.

Networked Artificial Intelligence

AI-Enabled 5G Networking

Radhika Ranjan Roy United States Army Research Laboratory, USA

With the advent of 5G wireless technologies, distributed AI is becoming immersive in all elements of the network (i.e., cloud, edge, and terminal devices), which makes AI virtually operate as a networking system. 5G technologies are enabling AI-based applications over the global network. This book provides a unified framework for the deep convergence of computing and communications, where the network and application/service can be jointly optimized as a single integrated system using AI. It presents a full treatment of 5G networked AI.

Preparing Healthcare Workers for an AI-Driven Workplace

Anthony Matthew Hopper Consultant, Henrico, Virginia, USA

Trainers, healthcare leaders, and practitioners at all levels can use the information in this book to help them teach students to succeed in the complex, fluid healthcare field. These professionals will discover the core traits that make-up analytical thinking and technology-related behaviors. They will learn how best to train students to develop these skills—as they relate to the workplace. Healthcare administrators will further see how they can amend current practices to help employees become better at analytics and strategic thinking. Finally, healthcare leaders will learn how to convey information to a wide array of stakeholders.

Psybersecurity

Human Factors of Cyber Defence

Edited by **Oliver Guidetti** Edith Cowan University School of Arts and Humanities, Australia, **Mohiuddin Ahmed**, **Craig Speelman**

Psybersecurity: Human Factors of Cyber Defence is a clarion call to action in the face of a stark reality: over 90% of cyber attacks exploit human vulnerabilities, as highlighted by the 2022 Global Risks Report from the World Economic Forum. This gap between the rapid advancement of cyber security technologies and the slower pace of development in human-centric defences poses a formidable challenge to national security and personal safety. Amidst the dazzling progress of AI technologies like ChatGPT and Microsoft Security Co-Pilot, the human element of cyber security remains critically underdeveloped.

Psychology of Agile

Exploring the Human Element at Work

Bhuvan Unhelkar University of South Florida

Agile is a mindset and a culture that has evolved beyond software development to encompass all forms of project management, business organizations, defense, and society. In today's fast-paced and ever-changing world, adopting an Agile approach is essential for organizations to thrive and maintain competitiveness. This book aims to extend the concept of Agility beyond the four declarations of the Manifesto and apply it to various projects, organizations, and even society. The book delves into the intricacies of Agile and highlights its significance in modern workplaces. It emphasizes that Agile is more than just a set of tools and techniques.

Python

A Practical Learning Approach

T.S. Murugesh Govt. College of Engineering Srirangam, Tamil Nadu, **Shriram K. Vasudevan** Intel India Pvt Ltd., Tamil Nadu, **Sini Raj Pulari**

Python's simplicity and versatility make it an ideal language for both beginners and experienced programmers. Its syntax facilitates a smooth learning curve, enabling individuals to concentrate on grasping programming concepts instead of wrestling with intricate syntax rules. The book, "Python - A Practical Learning Approach," exemplifies Python's simplicity and versatility with numerous examples, ensuring a seamless learning journey. Beyond theory, the language's practicality allows learners to actively apply their knowledge in real-world scenarios, establishing Python as an asset in education.

Regulating Hate Speech Created by Generative AI

Edited by **Jay Liebowitz** Harrisburg University of Science and Technology, Pennsylvania, USA

Generative AI systems, such as Chat-GPT and Bard, pose a threat to countering hate and misinformation online. For example, The Center for Countering Digital conducted a test of Bard, which often generated answers denying the Holocaust. This book examines ways to regulate generative AI to reduce online hate and secure justice in a digital environment. Featuring research and offering practical guidelines, the book presents tangible guidelines for regulating generative AI models so they do not contribute to online hate disinformation and imagery.

Reliable and Intelligent Optimization in Multi-Layered Cloud Computing Architectures

Edited by **Madhusudhan H. S. Vidyavardhaka** College of Engineering, India, **Satish Kumar T**, **Punit Gupta**, **Dinesh Kumar Saini**, **Kashif Zia**

The book examines virtual machine placement techniques and task scheduling techniques that optimize resource utilization and minimize energy consumption of the cloud datacenter. Placement techniques provide an optimal solution to the optimization problem using multiple objectives. The book also focuses on basic design principles and analysis of virtual machine placement techniques and tasks allocation techniques. The virtual machine placement techniques are also used for quality-of-service (qoS) improvement of the service-oriented architecture-supported computing paradigm.

Research Advances in Intelligent Computing

Volume 2

Edited by **Anshul Verma** Banaras Hindu University, India, **Pradeepika Verma** IIT (BHU), India

As the computers and other machines have been developed, researchers and scientists have worked very hard to increase their capacity to carry out a variety of jobs. Thus, computers' capabilities in terms of varied working areas, adaptable duties, processing speed, and smaller size are all increasing exponentially every day. We are currently competing to develop machines or computers that are as intelligent as people. Making a computer or piece of software think like a smart human being is what artificial intelligence (AI) is all about. AI is influenced by the study of the human brain, namely how people make decisions, learn, and respond when attempting to solve any problems.

Research Advances in Network Technologies

Volume 2

Edited by **Anshul Verma** Banaras Hindu University, India, **Pradeepika Verma** IIT (BHU), India

In the present technological age, information is a valuable resource for both small and large enterprises as well as for our daily lives. The key enablers that link the computer resources and devices together to gather, process, and distribute the crucial data both locally and worldwide are network technologies. For our daily lives and commercial operations, network technologies offer effective, adaptable, and seamless communication while maximizing productivity and resources. This book will present the most recent and leading research work in the field of network technologies in order to achieve solutions for various problems exist in this domain.

Rock • Paper • Pixels

How Our Need to Communicate Created a New Economy, Society, and Individual: What will be the Effects of Artificial Intelligence and Quantum Computing?

Patrick Aievoli

The purpose of this book was to avail students of the many different reasons and back-stories equated with the advent of interaction design and its effect on our world. Since the beginning of recorded history mankind has desired to keep track of its events and accomplishments and to find a way to properly represent those occurrences to the rest of the world. Now with the use of interaction design and multimedia it has become possible to present the story through a current and evocative platform. The main goal of this book is to help you take your first steps in that new direction. To understand the effects of this new platform and to be way of its abilities and its dangers.

Secure and Smart Cyber-Physical Systems

Edited by **Uttam Ghosh** Meharry Medical College, USA,
Fortune Mhlanga, **Danda B Rawat**

Cybersecurity is a paramount concern in both Internet of Things (IoT) and Cyber-Physical Systems (CPS) due to the interconnected and often critical nature of these systems. The integration of AI/ML into the realm of IoT and CPS security has gained significant attention and momentum in recent years. The success of AI/ML in various domains has sparked interest in leveraging these technologies to enhance the security, resilience, and adaptability of IoT and CPS. Secure and Smart Cyber-Physical Systems provides an extensive exploration of AI/ML-based security applications in the context of IoT and CPS.

Secure Health

A Guide to Cybersecurity for Healthcare Managers

Edited by **Mohamed Hammad** Prince Sultan University, Saudi Arabia, **Gauhar Ali** Prince Sultan University, Saudi Arabia, **Mohammed A. El-Affendi** Prince Sultan University, Rafha Street, 11586, Riyadh, **Yassine Maleh** Sultan Moulay Slimane University, Morocco, **Ahmed A. Abd El-Latif**

In today's interconnected world, healthcare systems are increasingly turning to digital technologies to enhance patient care and optimize operations. However, this digital transformation presents significant challenges in guaranteeing the security and privacy of sensitive healthcare data. "Secure Health confronts these challenges head-on, offering a comprehensive exploration of the latest advancements and best practices in securing digital health systems.

Social Engineering in Cybersecurity

Threats and Defenses

Edited by **Gururaj H L** Manipal Institute of Technology, India, **Janhavi V** Vidyavardhaka College of Engg, Karnataka, **Ambika V** Vidyavardhaka College of Engg, Karnataka

This comprehensive textbook on social engineering attacks provides a deep and practical exploration of this increasingly prevalent threat in cybersecurity. It covers a wide array of attack vectors, including phishing, vishing, pretexting, and more, offering readers an in-depth understanding of how these attacks work. The book delves into the psychology behind social engineering, examining the cognitive biases and emotional triggers that make individuals susceptible.

Social Innovation Design Cases

A Chronicle of Global Journeys

Vijay K. Vaishnavi Georgia State University

The book focuses on how social innovations and associated social enterprises are or can be created. It uses a social innovation design process model that has been adapted from design science research process and is influenced by design thinking. The process model provides a general template for designing a social innovation and corresponding social enterprises. It chronicles the design journeys of 20 global social innovation design cases. In each case a detailed description of how social innovation has been designed is provided.

Soft Computing in Renewable Energy Technologies

Cover Image
Not Available

Edited by **Najib El Ouanjli**, **Mahmoud A. Mossa** Minia University, Egypt, **Mariya Ouaissa**, **Sanjeevikumar Padmanaban** University of South-Eastern Norway, **Said Mahfoud**

This book addresses and disseminates state-of-the-art research and development in the applications of soft computing techniques for renewable energy systems. It covers topics such as solar energy, wind energy, solar concentrator technologies as well as building systems and power generation systems. In all these areas applications of soft computing methods such as artificial neural networks, genetic algorithms, particle swarm optimization, cuckoo search, fuzzy logic and a combination of the above, called hybrid systems, are included. This book is a source for students interested in the fields of renewable energy and application of the soft computing.

Software Project Management

Methods and Techniques

Lawrence J. Peters

The management of a software project has been shown to be the number one factor in determining a project's success. It has been found that 53% of software projects failures are due to poor management. Not surprisingly, most software development managers have not been trained in project management. This book remedies this situation in two ways: familiarizing readers with the elements of the discipline and providing fact-based resources on practicing software project management. The book presents facts and data to refute many widely held mistaken beliefs about software projects. The book is intended for both students and software project managers.

The CISO Playbook

Cover Image
Not Available

Andres Andreu

Series: Security, Audit and Leadership Series

The CISO Playbook aims to provide nothing but real world advice and perspectives to both up and coming cybersecurity leaders as well existing ones looking to grow. The book does not approach cybersecurity leadership from the perspective of the academic, or what it should be, but more from that which it really is. Moreover, it focuses on the many things a cybersecurity leader needs to "be" given that the role is dynamic and ever-evolving, requiring a high level of adaptability.

The Expert in the Next Office

Tools for Managing Operations and Security in the Era of Cyberspace

M. E. Kabay

Series: Security, Audit and Leadership Series

As organizations increasingly depend on electronic information, the lack of systematic training on effective operations and security principles is causing chaos. Stories of data loss, data corruption, fraud, interruptions of service and poor system design continue to flood our news. This book reviews fundamental concepts and practical recommendations for operations and security managers and staff. The guidelines are based on the author's 40 years of experience in these areas. The text is written in simple English with references for all factual assertions so that readers can explore topics in greater detail.

The Hack Is Back

Techniques to Beat Hackers at Their Own Games

Jesse Varsalone, Christopher Haller

Have you wondered how hackers and nation states gain access to confidential information and the most secure environments in the world? Where did they learn these techniques and how do they refine them to achieve these objectives? How do I get started in a career in cyber and get hired? We will discuss and provide examples of some of the nefarious techniques used by hackers and cover how attackers apply these methods in a practical manner. The Hack is Back is tailored for both beginners and aspiring cybersecurity professionals to learn these techniques to evaluate and find risks on computer systems and networks.

The Next Generation Innovation in IoT and Cloud Computing with Applications

Edited by **Abid Hussain** Career Point University, India, **Ahmed J Obaid** University of Kufa, Iraq, **Garima Tyagi** Career Point University, India, **Amit Sharma** Career Point University, India

"The Next Generation Innovation in IoT and Cloud Computing with Its Applications" is a thought-provoking edited book that explores the cutting-edge advancements and transformative potential of the Internet of Things (IoT) and cloud computing. This comprehensive volume brings together leading experts and researchers to delve into the latest developments, emerging trends, and practical applications that define the next era of technological innovation. Readers will gain valuable insights into how IoT and cloud computing synergize to create a dynamic ecosystem, fostering unprecedented connectivity and efficiency across various industries.

The Security Leader's Communication Playbook and Leading the Digital Workforce Set

Jeffrey W. Brown

Series: Security, Audit and Leadership Series

This book examines the multitude of communication challenges that CISOs are faced with every day and provides practical tools to identify your audience, tailor your message and master the art of communicating. Future IT leaders won't be technology leaders, they'll be business leaders who understand technology. Leading the Digital Workforce takes a fresh look at technology leadership, exploring how to lead and manage in today's digital workplace where the pace of change is exponential.

The Volunteering Journey to Project Leadership

Mayte Mata Sivera, Yasmina Khelifi

Project managers can gain transferable skills for work by volunteering. This book explains how volunteering can help project managers hone their leadership skills. The Covid outbreak has shown the importance of human relationships, and not just at work. Having a supportive network of people can help move forward a career, and volunteering is a practical way to build such a network. Leadership skills are mastered by practicing, and by experimenting, and volunteering provides great opportunities to do this. Sharing lessons learned in their own personal leadership journey, the authors provide practical steps to prepare project managers for their own volunteering journey to leadership.

The Zero Trust Framework and Privileged Access Management (PAM)

Ravindra Das

This book is about the Zero Trust Framework. Essentially, this is a methodology where an IT/Network Infrastructure of a business is segmented into smaller islands, each having their own lines of defenses. This is primarily achieved through the use of Multifactor Factor (MFA) authentication, where at least three more authentication layers are used, preferably being different from one another. It is hoped that by combining the Zero Trust Framework along with PAM, the use of passwords can be eradicated all together, thus giving rise to the "Passwordless Society".

Web 3.0

The Next Generation's Internet and Understanding the Concept of the Metaverse

Edited by **Prabhat Kumar Srivastav** IMS Eng. College, Ghaziabad, **Prateek Singhal** GLA University, Mathura, **Basudeo Singh Roohani** IMS Engineering College, **Nitin Sharma**

The book underscores AI's transformative impact on reshaping physical, digital, and biological boundaries, converging with technologies like robotics, IoT, 3D printing, genetic engineering, and quantum computing—termed Web 3.0 Industrial Revolution. The book's main goals include providing a collaborative platform for academia and industry researchers to share contributions and shape the future through knowledge exchange. Recognizing recent progress driven by increased computing power, it highlights the positive impact of digital technology—AI, IoT, AR/VR, Additive Manufacturing, CPS, cloud computing, and robotics—on industrial efficiency and quality.

Web Hacking Arsenal

A Practical Guide to Modern Web Pentesting

Rafay Baloch

The core of this book is its ability to adapt to the evolving nature of web security threats. It prepares the reader not just for the challenges of today but also for the unforeseen complexities of the future. This proactive approach ensures the book's relevance over time, empowering readers to stay ahead in the ever-changing cybersecurity landscape. In the digital age, where web applications form the crux of our interconnected existence, this book emerges as an essential guide to mastering the art and science of web application pentesting.

Zero to Hero

Your Guide to a Career in Cybersecurity

Felix Kyei Asare

"Zero to Hero: Your Guide to a Career in Cybersecurity" is an essential roadmap for anyone aiming to penetrate the vibrant and ever-expanding domain of cybersecurity. In an era where digital threats loom larger and more complex than ever, this book stands as a beacon of clarity and practical wisdom. Tailored to empower novices with no prior knowledge, as well as those with basic understanding seeking to solidify their footing in cybersecurity, it sets itself apart with a laser focus on real-world applicability, ensuring readers not only grasp theoretical concepts but are also primed to implement them effectively.

A Comprehensive Guide to Coding and Programming in Stata

Rafael Gafoor University College London, U.K.

This book is an introductory guide to programming and coding in Stata. Commonly encountered code in the field of medical statistics as well as the analyses of observational data are presented. For those who are involved in the analyses of observational studies, the need to sometimes assemble large datasets will necessitate a detailed understanding of loops and macros. This book covers these materials early on and then describes other commonly required coding commands. The focus on coding allows beginners to grasp the basics of coding and programming, as well as allowing established researchers to hone their skills and become more advanced programmers.

A First Course in Causal Inference

Peng Ding University of California Berkeley, U.S.A

Series: Chapman & Hall/CRC Texts in Statistical Science

This textbook, based on the author's course on causal inference at UC Berkeley taught over the past seven years, only requires basic knowledge of probability theory, statistical inference, and linear and logistic regressions. It assumes minimal knowledge of causal inference, and reviews basic probability and statistics in the appendix. It covers causal inference from a statistical perspective and includes examples and applications from biostatistics and econometrics. This book is suitable for an advanced undergraduate or graduate-level course on causal inference, or postgraduate and PhD-level course in statistics and biostatistics departments.

Actuarial Loss Models

A Concise Introduction

Guojun Gan University of Connecticut, U.S.A

Series: Chapman & Hall/CRC Series in Actuarial Science

This book covers part of the learning outcomes of the Fundamentals of Actuarial Mathematics (FAM) exam and the Advanced Short-Term Actuarial Mathematics (ASTAM) exam administered by the Society of Actuaries. It can be used by actuarial students and practitioners who prepare for the aforementioned actuarial exams. This is a concise textbook written for undergraduate students majoring in actuarial science who wish to learn the basics of actuarial loss models. This book can be used as a textbook for a one-semester course on actuarial loss models. The prerequisite for this book is a first course on calculus. The reader is supposed to be familiar with differentiation and integration.

Adaptive Filtering Under Minimum Mean p -Power Error Criterion

Wentao Ma Xi'an University, China, **Badong Chen** Xi'an University, China

Adaptive filtering still receives attention in engineering as the use of the adaptive filter provides improved performance over the use of a fixed filter under the time varying and unknown statistics environments. This book aims to provide a comprehensive introduction of the MMPE and related adaptive filtering algorithms, which will become an important reference for researchers and practitioners in this application area. The book is geared to senior undergraduates with a basic understanding of linear algebra and statistics, graduate students, or practitioners with experience in adaptive signal processing.

An Introduction to Panel Data QCA in R

Preya Bhattacharya Xavier University of Louisiana, U.S.A

This book discusses and compares four different approaches towards analyzing panel data in QCA. It starts by introducing QCA as a research approach, then discusses the most important assumptions, and steps like set-calibration and theory-testing, and finally demonstrates each of the four panel data approaches, in separate chapters. Finally, it compares the strengths and weaknesses of each of these models and suggests scenarios where researchers can apply it. This book is supplemented by online RStudio materials, like datasets, codes, and Markdown documents for each chapter, and can be used as a textbook for introductory and advanced courses on panel-data QCA.

An Introduction to Spatial Data Science with GeoDa

Volume 2: Clustering Spatial Data

Luc Anselin University of Chicago

This book is the second in a two-volume series that introduces the field of spatial data science. It moves beyond pure data exploration to the organization of observations into meaningful groups, i.e., spatial clustering. This constitutes an important component of so-called unsupervised learning, a major aspect of modern machine learning. The book is intended for readers interested in going beyond simple mapping of geographical data to gain insight into interesting patterns as expressed in spatial clusters of observations. Familiarity with the material in Volume 1 is assumed, especially the analysis of local spatial autocorrelation and the full range of visualization methods.

An Introduction to Spatial Data Science with GeoDa

Volume 1 and 2

Luc Anselin University of Chicago

This book is the first in a two-volume series that introduces the field of spatial data science. It offers an accessible overview of the methodology of exploratory spatial data analysis. The focus of the book is on intuitive methods to discover interesting patterns in spatial data. It offers a progression from basic data manipulation through description and exploration, to the identification of clusters and outliers by means of local spatial autocorrelation analysis. This book is the second in a two-volume series that introduces the field of spatial data science. The book is intended for readers interested in going beyond simple mapping of geographical data.

2ND EDITION

Analysis of Categorical Data with R

Christopher R. Bilder University of Nebraska–Lincoln, USA, **Thomas M. Loughin** Simon Fraser University, Surrey, British Columbia, Canada

Series: *Chapman & Hall/CRC Texts in Statistical Science*

The second edition is a substantial update of the first based on the authors' experience of teaching from the book for nearly a decade. The book is organized as before, but with new content throughout, and there are two new substantive topics in the advanced topics chapter – group testing and splines. The computing has been completely updated, with the emmeans [CB1] package now integrated into the book.

Chapman & Hall

3RD EDITION

Analyzing Baseball Data with R

Jim Albert, **Benjamin S. Baumer** Smith College, Northhampton, MA, **Max Marchi**

Series: *Chapman & Hall/CRC The R Series*

Analyzing Baseball Data with R Third Edition introduces R to sabermetricians, baseball enthusiasts, and students interested in exploring the richness of baseball data. It equips you with the necessary skills and software tools to perform all the analysis steps, from importing the data to transforming them into an appropriate format to visualizing the data via graphs to performing a statistical analysis. New to the third edition is revised R code to make use of new functions made available through the tidyverse. The third edition introduces three chapters of new material, focusing on communicating results via presentations using the Quarto publishing system.

Applied Microbiome Statistics

Correlation, Association, Interaction and Composition

Yinglin Xia, **Jun Sun**

Series: *Chapman & Hall/CRC Biostatistics Series*

This unique book officially defines Microbiome Statistics as a specific new field of statistics, and addresses the statistical analysis of correlation, association, interaction and composition in microbiome research. It also defines microbiome as a hypothesis-driven experimental science, describes two microbiome research themes and six unique characteristics of microbiome data, as well as investigates challenges for statistical analysis of microbiome data using the standard statistical methods. This book is useful for researchers of biostatistics, ecology, and data analysts.

Bayesian Inference

Theory, Methods, Computations

Silvelyn Zwanzig Uppsala University, Sweden, **Rauf Ahmad**

Bayesian Inference: Theory, Methods, Computations provides a comprehensive coverage of the fundamentals of Bayesian inference from all important perspectives, namely theory, methods and computations. The book is primarily aimed at first or second semester master students, where parts of the book can also be used at Ph.D. level or by research community at large. The emphasis is on exact cases. However, to gain further insight into the core concepts, an entire chapter is dedicated to computer intensive techniques. Selected chapters and sections of the book can be used for a one-semester course on Bayesian statistics.

Bayesian Mediation Analysis using R

Atanu Bhattacharjee University of Leicester, UK

Focused on various forms of time-to-event data methodologies, this book helps readers master the application of Bayesian mediation analysis using R. Across ten chapters, this book explores concepts of mediation analysis, survival analysis, accelerated failure time modeling, longitudinal data analysis, and competing risk modeling. Each chapter progressively unravels intricate topics, from the foundations of Bayesian approaches to advanced techniques like variable selection, bivariate survival models, and Dirichlet process priors.

Bayesian Precision Medicine

Peter F. Thall M.D. Anderson Cancer Center, Houston, Texas, USA

Series: *Chapman & Hall/CRC Biostatistics Series*

Presents modern Bayesian statistical models and methods for identifying treatments tailored to individual patients using their prognostic variables and predictive biomarkers. The process of evaluating and comparing treatments is explained and illustrated by practical examples, followed by a discussion of causal analysis and its relationship to statistical inference.

Causal Inference in Pharmaceutical Statistics

Yixian Fang AbbVie, Chicago, USA

Series: *Chapman & Hall/CRC Biostatistics Series*

Causal Inference in Pharmaceutical Statistics introduces the basic concepts and fundamental methods of causal inference relevant to pharmaceutical statistics. This book covers causal thinking for different types of commonly used study designs in the pharmaceutical industry, including randomized controlled clinical trials, longitudinal studies, single-arm clinical trials with external controls, and real-world evidence studies. The book is intended for clinical statisticians and epidemiologists working in the pharmaceutical industry, and is useful to graduate students in statistics, biostatistics, and data science looking to pursue a career in the pharmaceutical industry.

Compound Poisson Approximation

V. Čekanavičius, **S. Y. Novak**

Compound Poisson Approximation appears naturally in situations where one deals with a large number of rare events. It has important applications in insurance, extreme value theory, reliability theory, mathematical biology, etc. This book synthesizes the most important recent research in the field in a single volume. The book is of interest to researchers and postgraduate students from probability, statistics, and mathematics.

Data Driven Mathematical Modeling in Agriculture

Tools and Technologies

Edited by **Sabyasachi Pramanik**, **Sandip Roy**, **Rajesh Bose**

Series: *River Publishers Series in Mathematical, Statistical and Computational Modelling for Engineering*

To identify the variables affecting farmers' choices to embrace more precise technology, zero-inflated Poisson and negative binomial count data regression models are utilized. Outcomes from the count data analysis of a random sample of various farm operators show that various aspects, including farm dimension, farmer demographics, soil texture, urban impacts, farmer position of liabilities, and position of the farm in a state, were significantly associated with the approval severity and likelihood of precision farming technologies.

Data Management in Large-Scale Education Research

Crystal Lewis

Research data management is becoming more complicated. Researchers are collecting more data, using more complex technologies, all while increasing the visibility of our work with the push for data sharing and open science practices. This book is for anyone involved in a research study involving original data collection. While the book focuses on quantitative data, typically collected from human participants, many of the practices covered can apply to other types of data as well. The book contains foundational context, instructions, and practical examples to help researchers in the field of education.

Data Science

A First Introduction with Python

Tiffany Timbers University of British Columbia, **Trevor Campbell**, **Melissa Lee** Assistant Professor, Uni of British Columbia, Canada, **Joel Ostblom**, **Lindsey Heagy** Professor, Uni of British Columbia, Canada

Series: *Chapman & Hall/CRC Data Science Series*

This book focuses on using the Python programming language in Jupyter notebooks to perform data manipulation and cleaning, create effective visualizations, and extract insights from data using classification, regression, clustering, and inference. The text emphasizes workflows that are clear, reproducible, and shareable, and includes coverage of the basics of version control. All source code is available online, demonstrating the use of good reproducible project workflows. The book is designed for learners from all disciplines with minimal prior knowledge of mathematics and programming. The authors have honed the material through years of experience teaching.

Data Science and Risk Analytics in Finance and Insurance

Tze Leung Lai Stanford university Stanford University Stanford University, California, USA Stanford University, California, USA, **Haipeng Xing** SUNY, Stony Brook, New York, USA

Series: *Chapman and Hall/CRC Financial Mathematics Series*

This book presents statistics and data science methods for risk analytics in quantitative finance and insurance. Part I covers the background, financial models, and data analytical methods for market risk, credit risk, and operational risk in financial instruments, as well as models of risk premium and insolvency in insurance contracts. Part II provides an overview of machine learning, Monte Carlo simulation, and sequential analysis techniques for risk analytics. In Part III, the book offers a non-technical introduction to four key areas in financial technology: artificial intelligence, blockchain, cloud computing, and big data analytics.

Empirical Research in Accounting

Tools and Methods

Ian D. Gow University of Melbourne, Australia, **Tongqing Ding** University of Melbourne, Australia

Series: *Chapman and Hall/CRC Series on Statistics in Business and Economics*

This textbook provides the foundation for a course that takes PhD students in empirical accounting research from the very basics of statistics, data analysis, and causal inference up to the point at which they conduct their own research. Starting with foundations in statistics, econometrics, causal inference, and institutional knowledge of accounting and finance, the book moves on to an in-depth coverage of the core papers in capital market research. Readers of the book will develop deep data analysis skills using modern tools. Extensive replication and simulation analysis is included throughout.

Exploring Complex Survey Data Analysis Using R

A Tidy Introduction with {srvyr} and {survey}

Stephanie Zimmer, **Rebecca Powell**, **Isabella Velásquez**

In this book, readers embark on an in-depth journey into conducting complex survey analysis with the {srvyr} package and tidyverse family of functions from the R programming language. Intended for intermediate R users familiar with the basics of the tidyverse, this book gives readers a deeper understanding of applying appropriate survey analysis techniques using {srvyr}, {survey}, and other related packages. Readers will develop the skills necessary to perform impactful survey analysis on survey data collected through a randomized sample design. Additionally, this book teaches readers how to interpret and communicate results of survey data effectively.

Financial Data Analytics with R

Monte-Carlo Validation

Jenny K. Chen Morgan Stanley, U.S.A

This book is a comprehensive exploration of statistical methodologies and their applications in finance. Readers are taken on a journey in each chapter through practical explanations and examples, enabling them to develop a solid foundation of these methods in R and their applications in finance. This book serves as an indispensable resource for finance professionals, analysts, and enthusiasts seeking to harness the power of data-driven decision-making. Whether you are a seasoned professional or a newcomer to the world of financial analytics, this book serves as a guiding light, empowering you to navigate the landscape of finance with precision and confidence.

From Concepts to Code

Introduction to Data Science

Adam P. Tashman

The breadth of problems that can be solved with data science is astonishing, and this book provides the required tools and skills to a broad audience. The reader takes a journey into the forms, uses, and abuses of data and models, and learns how to critically examine each step. Python coding and data analysis skills are built from the ground up, with no prior coding experience assumed. The necessary background in computer science, mathematics, and statistics is provided in an approachable manner. The book leverages content developed by the author for a full-year data science course suitable for advanced high school or early undergraduate students.

From Data to Insights

A Beginner's Guide to Cross-Tabulation Analysis

Gianmarco Alberti University of Malta, Malta

This book offers a clear and accessible guide to cross-tabulation analysis, transforming a complex subject into an accessible topic. It diverges from traditional statistical texts, addressing common questions and concerns. The book covers the spectrum from foundational elements to comparatively more advanced topics in cross-tabulation analysis. It includes a comprehensive glossary and an appendix of detailed examples, providing practical insight and aiding understanding of key concepts. This book is an invaluable resource for students, researchers, and educators alike, offering a fresh perspective on cross-tabulation analysis that emphasises clarity and practical application.

Fundamental Statistical Concepts and Techniques in the Biological and Environmental Sciences

With jamovi

A. Bradley Duthie University of Stirling, UK.

Fundamental Statistical Concepts and Techniques in the Biological and Environmental Sciences: With jamovi is an introductory textbook for learning statistics. This book will be useful to students beginning their study of statistical concepts in biological and environmental sciences, whilst also acting as an insightful resource for teachers using jamovi in the classroom. Fundamental Statistical Concepts and Techniques in the Biological and Environmental Sciences is a valuable resource for anyone who wishes to understand and apply statistical techniques commonly used in the biological and environmental sciences.

5TH EDITION

Fundamentals of Probability

Saeed Ghahramani

This one- or two-term calculus-based basic probability text is written for majors in mathematics, physical sciences, engineering, statistics, actuarial science, business and finance, operations research, and computer science. It presents probability in a natural way: through interesting and instructive examples and exercises that motivate the theory, definitions, theorems, and methodology. This book is mathematically rigorous and, at the same time, closely matches the historical development of probability. Whenever appropriate, historical remarks are included, and the 2096 examples and exercises have been designed to arouse curiosity and encourage students to delve into the theory.

2ND EDITION

Generalized Linear Mixed Models

Modern Concepts, Methods and Applications

Walter W. Stroup, Marina Ptukhina Associate Professor, Whitman College, **Julie Garai** Associate Professor, Uni of Nebraska-Lincoln

Series: Chapman & Hall/CRC Texts in Statistical Science

Generalized Linear Mixed Models: Modern Concepts, Methods and Applications (2nd edition) presents an updated introduction to linear modeling using the generalized linear mixed model (GLMM) as the overarching conceptual framework. For students new to statistical modeling, this book helps them see the big picture – linear modeling as broadly understood and its intimate connection with statistical design and mathematical statistics. This second edition is updated to reflect lessons learned and experience gained regarding best practices and modelling choices faced by GLMM practitioners. New to this edition are two chapters focusing on Bayesian methods for GLMMs.

Geographic Information, Geospatial Technologies and Spatial Data Science for Health

Justine Blanford University of Twente, Netherlands

In this book, epidemiology and public health are integrated with spatial data science to examine health issues in dynamically changing environments. This is too broad a field to be completely covered in one book and so it has been necessary to be selective with the topics, methods and examples used to avoid overwhelming introductory readers, while at the same time providing sufficient depth for geospatial experts interested in health, and for health professionals interested in integrating geospatial elements for health analysis. A variety of geographic information are used to better understand health risks and disease outcomes.

Handbook of Statistical Methods for Precision Medicine

Edited by **Eric Laber** North Carolina State University, Raleigh, USA, **Bibhas Chakraborty**, **Erica E. M. Moodie**, **Tianxi Cai**, **Mark van der Laan**

Series: Chapman & Hall/CRC Handbooks of Modern Statistical Methods

The statistical study and development of analytic methodology for individualization of treatments is no longer in its infancy. Many methods of study design, estimation, and inference exist, and the tools available to the analyst are ever growing. This handbook introduces the foundations of modern statistical approaches to precision medicine, bridging key ideas to active lines of current research in precision medicine. The contributions in this handbook vary in their level of assumed statistical knowledge; all contributions are accessible to a wide readership of statisticians and computer scientists including graduate students and new researchers in the area.

Getting (more out of) Graphics

Practice and Principles of Data Visualisation

Antony Unwin University of Augsburg

Series: Chapman & Hall/CRC Data Science Series

Data graphics are used extensively to present information. Understanding graphics is a lot about understanding the data represented by the graphics, having a feel not just for the numbers themselves, the reliability and uncertainty associated with them, but also for what they mean. This book presents a practical approach to graphic data analysis with real applications front and centre. A knowledge of Statistics is not required, just an interest in data graphics and some experience of working with data. It will help if the reader knows something of basic graphic forms such as barcharts, histograms, and scatterplots.

Introduction to Applied Spatial Econometrics

Roger S. Bivand, **Gianfranco Piras** West Virginia University, Morgantown, USA

The book addresses the underlying question of mis-specification in models estimated with spatial data, which can have many sources: variables not adequately operationalizing theoretical concepts; observations not matching the actual (but often unobservable) entities implied by spatial processes; omitted variables and errors in variables; inappropriate functional form leading to spatial patterning, etc. When spatial econometrics focusses on model estimation techniques, it is most often assumed that mis-specification is restricted to spatial autocorrelation and occasionally heteroskedasticity.

Handbook of Sharing Confidential Data

Differential Privacy, Secure Multiparty Computation, and Synthetic Data

Edited by **Jörg Drechsler**, **Daniel Kifer**, **Jerome Reiter**, **Aleksandra Slavković**

Series: Chapman & Hall/CRC Handbooks of Modern Statistical Methods

Statistical agencies, research organizations, companies, and other data stewards that seek to share data with the public face a challenging dilemma. In an age when information on data subjects is available from a wide range of data sources, as are the computational resources to obtain that information, this challenge is increasingly difficult. The Handbook of Sharing Confidential Data helps data stewards understand how tools from the data confidentiality literature—specifically, synthetic data, formal privacy, and secure computation—can be used to manage trade-offs in disclosure risk and data usefulness.

2ND EDITION

Introduction to Data Science

Data Wrangling and Visualization with R

Rafael A. Irizarry

Series: Chapman & Hall/CRC Data Science Series

Thoroughly revised and updated, this is the first book of the second edition of Introduction to Data Science: Data Wrangling and Visualization with R. It introduces skills that can help you tackle real-world data analysis challenges. No previous knowledge of R is necessary, although some experience with programming may be helpful. If you read and understand all the chapters and complete all the exercises in this book, and understand statistical concepts, you will be well-positioned to perform basic data analysis tasks and you will be prepared to learn the more advanced concepts and skills needed to become an expert.

Model-Based Monitoring and Statistical Control

Kohei Ohtsu

Series: Chapman & Hall/CRC Interdisciplinary Statistics

Available in English for the first time, this classic and influential book by the late Kohei Ohtsu presents real examples of ships in motion under irregular ocean waves, how to understand the characteristics of fluctuations of stochastic phenomena through spectral analysis methods and statistical modeling. It also explains how to realize prediction and optimal control based on time series models. Part 1 describes classical spectral method for the analysis of stochastic phenomena. In Part 2, this book explains methods to construct time series models using the information criterion. Part 3 presents the basic knowledge necessary for understanding these topics of the book.

2ND EDITION

Modern Statistics with R

From Wrangling and Exploring Data to Inference and Predictive Modelling

Måns Thulin

Recent decades have transformed the world of statistical data analysis, with new methods, new types of data, and new computational tools. Modern Statistics with R introduces key parts of this modern statistical toolkit. No prior programming experience is necessary. Clear explanations and examples are provided to accommodate readers at all levels of familiarity with statistical principles and coding practices. A basic understanding of probability theory can enhance comprehension of certain concepts discussed within this book. In addition to plenty of examples, the book includes more than 200 exercises, with fully worked solutions available at www.modernstatisticswithr.com.

3RD EDITION

Multilevel Modeling Using R

W. Holmes Finch Ball State University, USA, **Jocelyn E. Bolin** Ball State University, USA

Series: Chapman & Hall/CRC Statistics in the Social and Behavioral Sciences

Like its bestselling predecessor, *Multilevel Modeling Using R*, Third Edition provides the reader with a helpful guide to conducting multilevel data modeling using the R software environment. The third edition of the book includes several new topics that were not present in the second edition. Specifically, a new chapter has been included, focussing on fitting multilevel latent variable modeling in the R environment. This updated revision gives the reader state-of-the-art tools to launch their own investigations in multilevel modeling.

5TH EDITION

Multivariate Statistical Methods

A Primer

Bryan F.J. Manly University of Otago, Dunedin, New Zealand, **Jorge A. Navarro**, **Ken Gerow**

Great starting point for readers looking to become proficient in multivariate statistical methods, but who might not be deeply versed in the language of mathematics. In this edition, we provide readers with conceptual introductions to methods, practical suggestions, new references, and a more extensive collection of R functions and code that will help them to deepen their toolkit of multivariate statistical methods.

2ND EDITION

Nonparametric Statistical Methods Using R

John Kloke, **Joseph McKean**

Series: Chapman & Hall/CRC Texts in Statistical Science

This thoroughly updated and expanded second edition covers traditional nonparametric methods and rank-based analyses. Two new chapters covering multivariate analyses and big data have been added. Core classical nonparametrics chapters on one- and two-sample problems have been expanded to include discussions on ties as well as power and sample size determination. The book is suitable for advanced undergraduate and graduate students in statistics and data science, and students of other majors with a solid background in statistical methods including regression and ANOVA. It will also be of use to researchers working with nonparametric and rank-based methods in practice.

Partial Least Squares Regression

and Related Dimension Reduction Methods

R. Dennis Cook University of Minnesota, U.S.A, **Liliana Forzani** Universidad Nacional del Litoral, Argentina

Partial least squares (PLS) regression is, at its historical core, a black-box algorithmic method for dimension reduction and prediction based on an underlying linear relationship between a possibly vector-valued response and a number of predictors. Through envelopes, much more has been learned about PLS regression, resulting in a mass of information that allows an envelope bridge that takes PLS regression from a black-box algorithm to a core statistical paradigm based on objective function optimization and, more generally, connects the applied sciences and statistics in the context of PLS. This book focuses on developing this bridge.

Practical Machine Learning with R

Tutorials and Case Studies

Carsten Lange Professor of Economics, Cal Poly Pomona, USA.

This textbook is a comprehensive guide to machine learning and artificial intelligence tailored for students in business and economics. It takes a hands-on approach to teach machine learning, emphasizing practical applications over complex mathematical concepts. Students are not required to have advanced mathematics knowledge such as matrix algebra or calculus. This book is not just a textbook; it is a dynamic learning experience that empowers students and instructors alike with a practical and accessible approach to machine learning in business and economics.

Predictive Data Modelling for Biomedical Data and Imaging

Edited by Poonam Tanwar, Tapas Kumar, K. Kalaiselvi, Haider Raza, Seema Rawat

Series: River Publishers Series in Biotechnology and Medical Research

In this book, we embark on a journey into the realm of predictive data modeling for biomedical data and imaging in healthcare. It explores the potential of predictive analytics in the field of medical science through utilizing various tools and techniques to unravel insights and enhance patient care. Predictive Data Modelling for Biomedical Data and Imaging is divided into three sections, namely Section I – Beginning of Predictive Data Modeling for Biomedical Data and Imaging/Healthcare, Section II – Data Design and Analysis for Biomedical Data and Imaging/Healthcare, and Section III – Case Studies of Predictive Analytics for Biomedical Data and Imaging/Healthcare.

Principles of Psychological Assessment

With Applied Examples in R

Isaac T. Petersen

Series: Chapman & Hall/CRC Statistics in the Social and Behavioral Sciences

Discusses psychometrics, the assessment of various psychological domains, various measurement methods and emerging analytical frameworks to evaluate and improve assessment, generalizability theory, structural equation modeling, item response theory, and signal detection theory, ethics, test bias, and cultural and individual diversity.

Probability Theory

An Introduction Using R

Shailaja R. Deshmukh Savitribai Phule Pune University, India, **Akanksha S. Kashikar** Savitribai Phule Pune University, India

This book introduces Probability Theory with R software and explains abstract concepts in a simple and easy-to-understand way by combining theory and computation. It discusses conceptual and computational examples in detail, to provide a thorough understanding of basic techniques and develop an enjoyable read for students seeking suitable material for self-study. It illustrates fundamental concepts including fields, sigma-fields, random variables and their expectations, various modes of convergence of a sequence of random variables, laws of large numbers and the central limit theorem.

Scientific Data Analysis with R

Biostatistical Applications

Azizur Rahman, **Faruq Abdulla**, **Md. Moyazzem Hossain**

This book is the ideal companion in navigating the convergence of statistical methodologies and data science techniques with diverse applications implemented in the open-source environment of R. This book is intended for students, researchers, and professionals eager to harness the combined power of biostatistics, data science, and the R programming language while gathering vital statistical knowledge needed for cutting-edge scientists in all fields. It is useful for those seeking to understand the basics of data science and statistical analysis, or looking to enhance their skills in handling any simple or complex data including biological, health, medical, and industry data.

Simulation and Statistics with Excel

An Introduction to Business Students

Luis Fernando Ibarra UNET Tachira University, Venezuela

Simulation and Statistics with Excel: An Introduction to Business Students offers a non-rigorous and practical tour of the simulation procedure on computers, using a versatile and accessible resource, the Microsoft Excel spreadsheet. This book covers the concepts essential to understanding the basic principles and approaches of statistical simulation, allowing for the study of complex systems. Aimed at students in business and operational research beginning to use simulation as an instrument for understanding existing or proposed processes, this book will lay solid foundations in understanding simulation experimentation.

Skew-Normal Model Theories and Their Applications

Rendao Ye Hangzhou Dianzi University, China, **Wenyan Zhu** Hangzhou Dianzi Uni, China, **Yue Qi** Hangzhou Dianzi Uni, China, **Kun Luo** Hangzhou Normal Uni, China

This book focuses on several skew-normal mixed effects models, and systematically explores the statistical inference theories, methods, and applications of parameters of interest. This book is of academic value, since it helps to establish a series of statistical inference theories and methods for skew-normal mixed effects models. It will also provide efficient methods and tools for practical data analysis in various fields including economics, finance, biology and medical science, which features its application value.

Spatial Analysis in Geology Using R

Pedro M. Nogueira

Series: Chapman & Hall/CRC The R Series

Unlock the Power of Spatial Analysis in Geology with R! Empowers you to harness the potential of spatial analysis in addressing pressing geological challenges. Can also be used as a textbook either in introductory courses in spatial analysis or in advanced GIS and Digital mapping - comprehensive guide tailored to professionals at all levels.

2ND EDITION

Statistical Inference

George Casella , Roger Berger

Series: Chapman & Hall/CRC Texts in Statistical Science

This classic textbook builds theoretical statistics from the first principles of probability theory. Starting from the basics of probability, the authors develop the theory of statistical inference using techniques, definitions, and concepts that are statistical and are natural extensions, and consequences, of previous concepts. It covers all the topics from a standard inference course, including distributions, random variables, data reduction, point estimation, hypothesis testing, interval estimation, and regression.

Statistical Methods for Dynamic Disease Screening and Spatio-Temporal Disease Surveillance

Peihua Qiu

Series: Chapman & Hall/CRC Biostatistics Series

Disease screening and disease surveillance (DSDS) constitute two critical areas in public health, each presenting distinctive challenges primarily due to their sequential decision-making nature and complex data structures. Explores numerous recent analytic methodologies that enhance traditional techniques. Demonstrates how these novel methods effectively address the challenges of DSDS.

Statistical Methods Using SPSS

Gabriel Otieno Okello

Statistical Methods Using SPSS provides a practical approach for better understanding of the advanced statistical concepts that are applied in business, economics, epidemiology, public health, agriculture and other areas of data analytics. This book is useful in explaining advanced statistical analysis techniques to postgraduate students, doctoral students and researchers. It is also a useful reference for students and researchers who require further guidance in advanced data analysis, and is designed for those with basic statistical knowledge. Exercises and solution manuals are also included to aid in the understanding of the statistical analysis techniques.

Statistical Prediction and Machine Learning

John Tuhaio Chen Bowling Green State University, Ohio, USA, **Clement Lee , Lincy Y. Chen** Cornell University, U.S.A

Written by an experienced statistics educator and two data scientists, this book unifies conventional statistical thinking and contemporary machine learning framework into a single overarching umbrella over data science. The book is designed to bridge the knowledge gap between conventional statistics and machine learning. It provides an accessible approach for readers with a basic statistics background to develop a mastery of machine learning. One of the distinct features of this book is the comprehensive coverage of the topics in statistical learning and medical applications. It summarizes the authors' teaching, research, and consulting experience in which they use data analytics.

The Data Preparation Journey

Finding Your Way with R

Martin Hugh Monkman University of Victoria, Division of Continuing Studies, Canada

Series: Chapman & Hall/CRC Data Science Series

This book introduces the principles of data preparation within a systematic approach that follows a typical data science or statistical workflow. This book is designed for readers with a working knowledge of data manipulation functions in R or other programming languages. It is suitable for academics for whom analyzing data is crucial, businesses who make decisions based on the insights gleaned from collecting data from customer interactions, and public servants who use data to inform policy and program decisions. The principles and practices described within The Data Preparation Journey apply regardless of the context.

The Polls Weren't Wrong

Carl Allen

By first understanding how polls work at a fundamental level, this book gives readers the ability to discern flaws in the current methods. Then, through specific political examples from both the US and UK, it is shown how polls famously derided as "wrong" were, in fact, accurate. While polls are not always accurate, the reasons we can and can't (rightly) call them "wrong" are explained in this book. This book will equip readers with the tools to navigate the mismatch of expectations. It is not intended to replace more technical applications of statistics but is accessible to anyone interested to learn more about how poll data should be understood.

Tidy Finance with Python

Christoph Scheuch , Stefan Voigt , Patrick Weiss
Reykjavik University, Iceland, **Christoph Frey** Pinechip
Capital, Germany

Series: Chapman & Hall/CRC The Python Series

This book shows how to bring theoretical concepts from finance and econometrics to the data. Focusing on coding and data analysis with Python, how to conduct research in empirical finance from scratch is shown. We start by introducing the concepts of tidy data and coding principles using pandas, numpy, and plotnine. Code is provided to prepare common open-source and proprietary financial data sources and organize them in a database. We reuse these data in all the subsequent chapters, which we keep as self-contained as possible. The empirical applications range from key concepts of empirical asset pricing to modeling and machine learning applications.

Twisted Logic

Puzzles, Paradoxes, and Big Questions

Leighton Vaughan Williams

Draws upon an array of popular and novel puzzles, problems, and paradoxes, and uses these to help understand and navigate our everyday world. Addresses some of the big questions. Aimed at all those interested in learning about weird and wonderful problems and paradoxes. Designed for everyone - accessible to the layman and student alike. No prior mathematical skill or technical knowledge is required.

2ND EDITION

Understanding Elections through Statistics

Polling, Prediction, and Testing

Ole J. Forsberg

Series: Chapman & Hall/CRC Statistics in the Social and Behavioral Sciences

Regarding elections and polls, it explores this random phenomenon from three primary points of view: predicting election outcome using opinion polls, testing outcome using government-reported data, and exploring election data to better understand the people.
